# CLINCHER™

Parallel Shaft Gear Units  
& Speed Reducers

Robust, High Performance, Modular Design  
SK 0182.1NB - SK 11382.1 Parallel Helical Gear Units

**PRODUCT OVERVIEW**  
**G1020 - 60 Hz**

## Spanning the globe To serve you

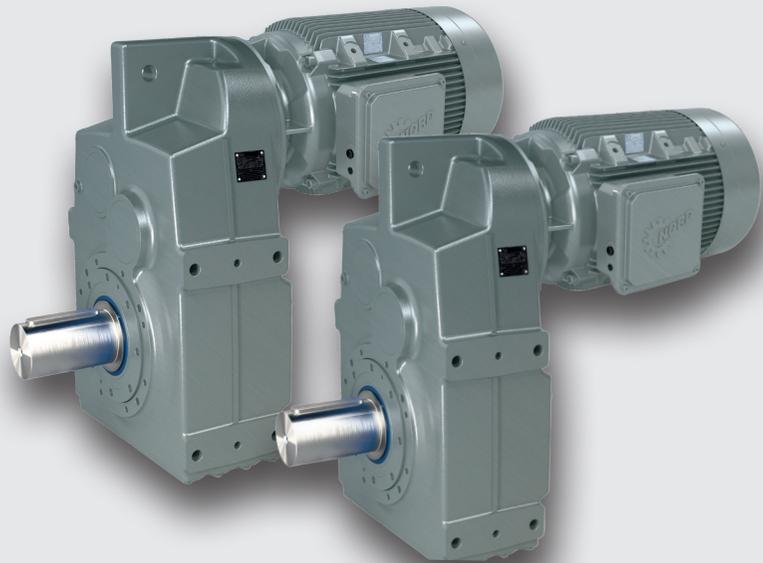

Since 1965, NORD has become well established in the power transmission industry and grown to global proportions on the strength of product performance, superior customer service, and intelligent drive solutions. NORD is constantly improving and expanding its products to meet a never-ending variety of industrial challenges.

NORD designs and manufactures drive systems engineered for adaptability. NORD's innovative drive solutions are specified and utilized for a range of applications in nearly every industry throughout the world.

NORD Drivesystems' product portfolio is extensive and continuously evolving in order to meet the needs of today's fast-changing markets. NORD's range of drive equipment includes: helical in-line, helical shaft-mount, helical-bevel, helical-worm and worm gear units with torques from 90 lb-in to 2,200,000 lb-in, readily available AC motors and from 1/6 HP to 250 HP, variable frequency drives up to 250 HP, and mechanical variable speed drives.

But NORD does far more than manufacture the world's finest drive components. We provide our customers with optimum drive configurations for their specific purposes, providing each and every one with truly complete and efficient systems at a price/quality ratio unmatched in today's competitive markets.

NORD makes its wide product range easily available through a global network that includes representation in over 60 countries. By providing all of our customers with prompt delivery, and expert support services, we are firmly committed to exceeding customer expectations and being responsive to the ideas and specifications of every customer, anywhere in the world.

### CLINCHER™ Parallel Shaft Gear Units

The CLINCHER™ Parallel Shaft gear units have an offset between the input and output shaft resulting in a shorter or flatter design in comparison with other gear units. The CLINCHER™ Parallel Shaft reducers and gearmotors feature a torsionally rigid UNICASE® housing. The CLINCHER™ gear units are available as foot, shaft or flange-mounted products. Modular design allows many input options including an integral motor, NEMA or IEC adapter, or a solid input shaft.

The CLINCHER™ Parallel Shaft gear units are also offered in a spread bearing/flange-mount (B5) design and are commonly specified on agitators, mixers, overhead conveyors and shredders. The lower bearing is an oversized, double row, re-greaseable spherical bearing designed to absorb high load conditions and provide longer service life. Clincher units include options for an oil-safe dry cavity or drywell design. The oil safe dry cavity contains any unlikely seal leaks from the reducer sump and is fitted with a site tube indicator or optional oil proximity switch to warn you if a leak occurs. The drywell design prevents oil leakage through the output flange by providing a physical barrier to separate the oil sump from the rotating equipment.

#### Features and Benefits

- Robust UNICASE® housing
- Case-hardened, high-quality gearing
- Oil-safe QUADRALIP™ seal system
- AUTOVENT™ regulates internal pressure and keeps contaminants out
- High performance inverter/vector duty motors & brakemotors
- Modular design for adaptability
- Spread-bearing / flange mount designs ideal for agitator, mixers, & overhead conveyor applications
- Optional screw conveyor package utilizing CEMA standards (G1129)
- Stainless steel (316) protective paint coating – USDA/H1 compliant
- Protective features and options for severe duty & washdown environments

## Company Overview

Since 1965, NORD has become well established in the power transmission industry and grown to global proportions on the strength of product performance, superior customer service, and intelligent drive solutions.

NORD designs and manufactures drivesystems engineered for adaptability. NORD's improving, expanded and innovative drive solutions are specified and utilized for a range of applications in nearly every industry throughout the world.

NORD Drivesystems' product portfolio is extensive and continuously evolving in order to meet the needs of today's fast-changing markets. NORD's range of drive equipment includes: helical in-line, helical shaft-mount, helical-bevel, helical-worm and worm gear units with torques from 90 lb-in to 2,200,000 lb-in, readily available AC motors from 1/6 HP to 250 HP, variable frequency drives up to 250 HP, & mechanical variable speed drives.

NORD does far more than manufacture the world's finest drive components. We provide our customers with optimum drive configurations for their specific purposes, providing each and every one with truly complete and efficient systems at a price/quality ratio unmatched in today's competitive markets.

## Short, On-Time Delivery

As a NORD customer, you can rest assured that your order will be delivered on time. Because NORD has both decentralized assembly and manufacturing operations and a linked global network, we offer our customers:

- Fast, reliable delivery
- Greater product versatility
- Shorter lead times
- Timely shipping
- Global Availability

## Global Availability

NORD makes its wide product range easily available through a global network that includes representation in over 60 countries. Providing all customers with prompt delivery, and expert support services, we are firmly committed to exceeding customer expectations and being totally responsive to the ideas and specifications of every customer, anywhere in the world.

## Increased North American Presence

NORD covers North America with over 30 district offices and over 500 distributor branches. NORD operates a manufacturing and assembly facility in Waunakee, WI, Charlotte, NC, Corona, CA, Brampton, ON, and Monterrey, Mexico, resulting in an ever-increasing capacity in the United States and Canada and giving our customers the shortest lead times in the industry.

## Manufacturing

NORD Gear continually invests in the latest research, manufacturing and automation technology. This ensures our ability to provide you with the utmost quality at an affordable price. Not only do we invest in our North American facilities, we invest in our factories throughout the world. We continually try to improve our practices to provide our customers with the most superior product available.

## Quality

Quality is assured at NORD assembly and manufacturing facilities, based on ISO 9000 standards — from careful inspection of incoming materials to closely monitored machining operations including gear cutting, turning, hardening & grinding as well as finishing and assembly.

## Worldwide Standards

NORD products are designed and manufactured based on the latest North American and global standards.

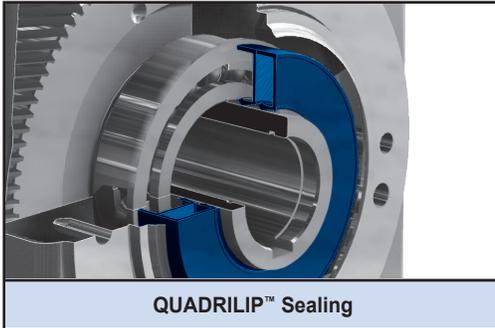

## Energy Efficiency

Lowering your operating costs is one of our greatest goals! NORD research and development focuses on energy efficiency, with gearboxes, motors, and frequency inverters designed for lower energy consumption. Our fully diverse line of in-line or right-angle units and motors has been developed to suit your needs.

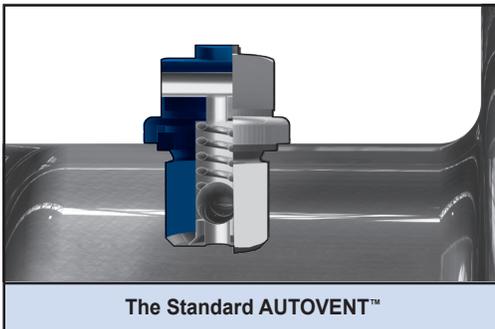

## NORD 911

Trouble? Just call 715-NORD-911 (in Canada, 905-796-3606). Emergency service is available 24 hours a day, 7 days a week. We'll answer your call, ship the parts, or build a unit and have it shipped directly to you to provide what you need, when you need it.

QUADRILIP™ Sealing

The Standard AUTOVENT™

## CLINCHER Key Features and Product Range

The CLINCHER™ Parallel Shaft gearmotors and gear reducers feature a torsionally rigid UNICASE® housing that integrates internally ribbed construction features with bearing seats and mounting faces that are precisely machined in one set-up. The high-strength UNICASE® housings combined with high-capacity bearings and quality gearing provides precise shaft and gear alignment, quieter operation, and a longer operating life. NORD's CLINCHER™ gear units also feature the QUADRILIP™ seal system on the output shaft.

The QUADRILIP™ seal system includes an outer double lip seal with trash guard, single lip inboard seal and grease pack barrier between the seals to offer superior protection against oil leaks and outside contaminants. The standard Autovent™ breather helps to prevent oil contamination as well as bearing and gear damage by acting like a check valve. The breather blocks out foreign materials, allows a safe release of pressure when it is needed, and closes tightly when the pressure reaches a safe operating level.

CLINCHER™ modular designs are engineered to provide application adaptability. The available mounting options include: shaft-mount, flange-mount & foot-mounted products. Input options include: integral motor, NEMA or IEC adapter, servo motor adapter, solid input shaft, motor mount platforms and scoop mount platforms. The CLINCHER™ spread-bearing/flange-mount designs are ideal for agitator, mixer, as well as overhead conveyor applications; these units feature an oversized, double row, re-greaseable spherical bearing designed to absorb high load conditions and provide longer service life. CLINCHER™ screw conveyor packages additionally provide CEMA standard shaft and flange mounting capabilities.

### Product Range:

<b>Sizes:</b>	14
<b>Power Range:</b>	0.16 - 250 Hp
<b>Efficiency:</b>	97% (2-stage) / 95.5 % (3-stage)
<b>Torque Range:</b>	575 – 680,180 lb-in
<b>Ratio Range:</b>	4.03:1 – 6,616.79:1

### Features:

- Robust UNICASE® housing
- Case-hardened, high-quality gearing (Rockwell 60 C typical / up to AGMA Class 13)
- Oil-safe QUADRILIP™ seal system
- AUTOVENT™ breather regulates internal pressure and keeps contaminants out
- High performance inverter/vector duty motors and brakemotors
- Modular design for application adaptability
- Spread-bearing / flange mount designs ideal for agitator, mixers, and overhead conveyor applications
- Optional screw conveyor package utilizing CEMA standards (Catalog G1129)
- Stainless steel (316) protective paint coating – USDA/H1 compliant
- Protective features and options for severe duty and washdown environments

## Gearbox Selection

A number of factors are considered when selecting a gear unit, including gearbox rating, service factor, speed and speed variation, horsepower, thermal capacity, ratio, physical size, ambient conditions and cost. Below are some guideline steps to help aid in the gear unit selection.

### Selection steps

1. Determine the speed and/or gear ratio
2. Determine the required power or torque
3. Determine Service Factor
4. Select the basic gearbox type and input
5. Determine the required mounting position
6. Select options
7. Checks – overhung load, thrust load, NEMA motor weight, thermal considerations, and other application considerations

#### 1. Determine the speed and/or gear ratio

The first step in selecting a gear unit is determining the final output speed or speeds you need. This speed is normally described in revolutions per minute (rpm). This output speed or speeds is determined by the input speed to the gear unit divided by its gear ratio. Their relationship is described by the following formulas.

$$i \text{ (gear ratio)} = \frac{\text{Input speed [rpm]}}{\text{Output speed [rpm]}}$$

$$\text{Output speed [rpm]} = \frac{\text{Input speed [rpm]}}{i \text{ (gear ratio)}}$$

To specify a gear unit, you can identify either gear ratio needed or the output speed (rpm) if the input speed is known.

#### 2. Power and Torque

The second step for selecting a gear unit is the required power or torque needed to power the load. Torque in this catalog is normally expressed in pound-inches [lb-in].

$$\text{Power [hp]} = \frac{\text{Torque [lb-in]} \times \text{speed [rpm]}}{63025}$$

$$\text{Torque [lb-in]} = \frac{\text{Power [hp]} \times 63025}{\text{speed [rpm]}}$$

For a proper selection, please ensure that the motor or other prime mover can produce enough torque or power and that the gear unit has adequate torque or power capacity. You must also consider if the power or torque is specified at the input or output of the gear unit. The Helical-worm gear units have lower efficiency than in-line or bevel gear units, therefore helical-worm products efficiency may need to be considered in the selection.

To specify a gear unit you can identify your selection with either torque or power.

### 3. Service Factor or Service Class

In addition to power or torque, service factor must also be considered. A service factor is essentially the ratio of extra capacity in a gear unit compared to the power or torque that is needed to run that application. The goal of selecting a gear unit with extra capacity (service factor) is to provide adequate service life in operation.

One reason to apply a larger service factor is if a unit operates more hours per day. If a unit runs 24 hours per day it should normally have a higher service factor than a unit that runs 8 hours per day if you expect the same calendar life.

A second reason for applying a larger service factor is to cope with a more difficult application. Even if it takes the same power and speed to operate a rock crusher as it does a fan, the rock crusher needs a stronger gearbox (higher service factor) to give the same operating life as the gear unit powering the fan.

The following are four possible methods of service factor specification.

#### a. Customer or User Specification

Many customers will have their own service factor guidelines or specifications.

#### b. AGMA Service Factoring

American Gear Manufacturers Association (AGMA) publishes lists of recommended service factors for different applications. These service factor recommendations have been determined from the experience of many gear manufactures and are in AGMA standard 6010. See page 46 for additional detail.

#### c. AGMA Service Classes

American Gear Manufactures Association (AGMA) has another method for selecting gear units service factors. AGMA standard 6009 lists many applications by a service class (I, II, III) with class I being the simplest applications and class III being the hardest. These application service classes are associated with a range of service factors by the following table.

AGMA Service Class	Service Factor
I	1.00 to 1.39
II	1.40 to 1.99
III	2.00 and above

In the gearmotors selection table each unit is also classified by an AGMA service class. See page 42 for additional detail.

#### d. NORD Mass Acceleration Service Factoring

NORD often uses a calculation based system to properly assign a service factor. This system considers hours of operation per day, the severity of the application and the number of times the equipment is cycled. See page 40 for additional detail.

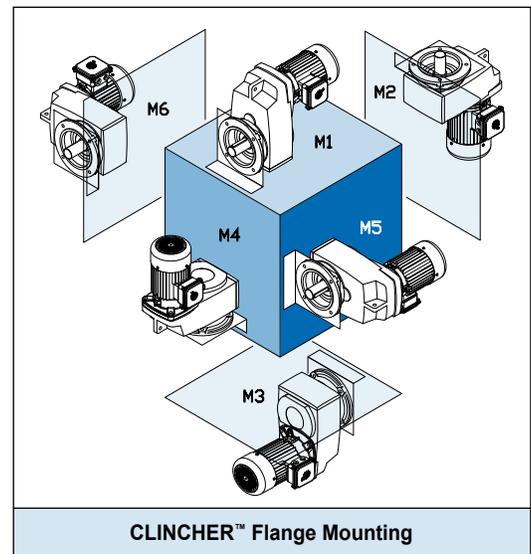

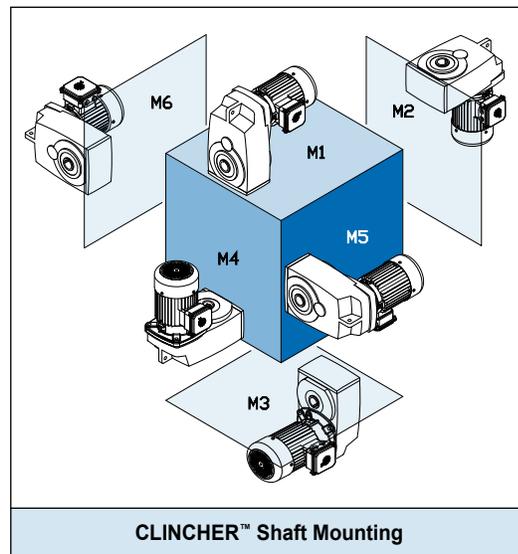

## 4. Gearbox Input

NORD's modular design allows for a number of different inputs to be added to our reducers including:

- Integral motor
- NEMA-C and IEC motor adapter
- Solid input shaft
- Servo motor adapter
- Scoop mount
- Motor mount platform

## 5. Mounting Position

The gearbox mounting position is an important and often overlooked specification. The mounting position determines how much oil the gear reducer requires, in addition to determining the position of the oil drain, oil fill and vent on the gear drive. NORD offers six basic mounting positions. If your application requires a variation from the six basic mounting positions, please contact NORD.

## 6. Options

NORD offers a number of mechanical, protective, and paint & lubrication options for our gear reducers & motors. Please see page 70 for gear unit options & refer to page 300 for motor options.

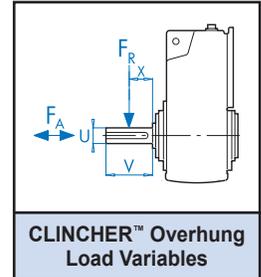

## 7. Checks

### a. Overhung Load

An overhung or radial load exists when a force is applied at right-angles to a shaft beyond the shaft's outermost bearing. Pulleys, sheaves and sprockets will cause an overhung load when used as a power take-off. The amount of overhung load will vary, depending on the type of power take-off used and where it is located on the shaft.

Overhung load [FR] can be found in the gearmotor rating tables and input shaft overhung load ratings [FR1] can be found on pages 31 - 38. Overhung load capacities should not exceed the values in the table to ensure long bearing life. Overhung load capacities are to be applied at the midpoint of the shaft extension and without thrust loads.

To calculate overhung load see page 31.

### b. Thrust Loads (Axial)

Loads that are directed towards or away from the gearbox along the axis of the shaft are called thrust or axial loads. Output shaft thrust capacity [FA] can be found in the gearmotor rating tables. Input shaft capacity [FA1] can be found on pages 34. Thrust load capacities should not exceed the values listed in the tables to ensure long bearing life. Thrust load capacities are listed for pure axial loads with no overhung load. Contact NORD for combination loads or a more exact examination of the application.

### c. C-face Motor Weight Limits

When mounting a motor to a NORD motor adapter it is important to consider the motor's weight. The following are tables that includes the maximum motor weight the NEMA or IEC adapters can support. If the motor exceeds the listed weight it must be externally supported. When a C-face mounted motor is externally supported care must be taken to ensure that the support system does not impose additional pre-loads on the motor adapter.

#### NEMA Motor Weight Limit

Motor FRAME	56C	143TC	145TC	182TC	184TC	210TC	250TC	280TC	324TC	326TC	365TC
Max Motor Weight [lb]	66	88	110	130	175	220	440	550	770	1100	1540

#### IEC Motor Weight Limit

Motor FRAME	63	71	80	90	100	112	132	160	180	200	225	250	280	315
Max Motor Weight [lb]	55	66	88	110	130	175	220	440	550	770	1100	1540	2200	3300

## General Warnings & Cautions

Applications with risk of personal injury should be reviewed together with NORD. Examples include hoists, lifts or other applications where people may be at risk.

### Vertical Reducer Mounting Positions

Gear units and gear motors may be mounted in positions with vertical shafts. For these mounting positions, the gear units are filled with increased amounts of lubricant. In some instances they may also be equipped with specially sealed, grease lubricated bearings. Gear units with vertical shafts have increased oil-splashing-losses resulting in a higher temperature rise during operation.

Consult NORD for determination of the thermal power capacity if the gear reducer is mounted as follows:

- In the reducer in upright or standing mounting position (M2 or M4).
- Right-angle reducer with vertical-down or vertical-up output-shaft mounting position (M5 or M6).

Page 18 displays the mounting positions.

### Vertical Motor or Vertical Input Shaft

Gear reducers mounted in M4 position or with the motor or input shaft vertical-up are designed with a higher oil level in order to assure the lubrication of the first stage gearing. These operating conditions result in increased oil churning or splashing losses and additional heating inside the gear unit.

For these applications it is critical to consider whether or not an Oil Expansion Chamber (OA) or Oil Reservoir Tank (OT) is required. Please consult pages 55-30.

### Ventilation

Gear units (except for SK0182NB, SK0282NB and SK 1382NB) typically include a vent to compensate for the difference in air pressure between the interior of the gear unit and its environment. The standard open vent and optional pressure vent are sealed for delivery with a transportation plug that must be removed prior to the reducer's activation.

### Multi-stage Gear Units

With 4-, 5-, 6-stage multi-stage gear units, there are additional no-load loss due to the added rotating parts and the relatively small drive input power. Thus, a no-load loss of approximately 40 watts for 4-pole motors up to 1 HP (0.75 kW) is accounted for in the performance tables.

## NEMA and IEC Adapters

NEMA/IEC adapters have an additional shaft coupling and additional bearing seats compared to integral motors. This means that there are higher no-load losses with NEMA or IEC adapters. We recommend mounting the motor directly, since it offers technical and cost advantages.

NEMA and IEC adapters used in hoist, lifts and other applications with danger of personal injury should be reviewed together with NORD.

### NEMA C-Face Adapter Capacity

The NEMA adapters are designed to handle the torques produced by the standard NEMA power assignment at 4 pole (1800 rpm) motor speeds. If a larger motor power is used than the power below NORD should be consulted. Also if a NEMA adapter is being used for other than an AC induction motor NORD should be consulted.

Adapter	Max Power [hp]	Adapter	Max Power [hp]
56C	1	250TC	20
140TC	2	280TC	30
180TC	5	320TC	50
210TC	10	360TC	75

### Overload Conditions

Loads that exceed the gearbox ratings are considered overloads. An overload may either be momentary or periodic in duration, as well as quasi-steady or vibratory in nature. The load magnitude and the number of stress cycles need to be considered and analysis is required to prevent low-cycle fatigue or yield stress failure.

Refer the following load conditions to the factory:

- The peak momentary or starting load exceeds 200% percent of gear unit's rated capacity.
- Frequent load reversals occur and develop high peak torques during the changes in load direction.
- Heavy repetitive shock loads may occur.
- When high-energy loads must be absorbed and high peak torques develop, such as when stalling conditions occur.

## Oversized Prime Movers

High torque motors or oversized prime movers are sometimes needed to overcome high energy loads. Recommended operating service factors do not cover instances where oversized prime movers are required. These applications should be reviewed by the factory.

## Variable Speed or Multi-Speed Applications

Gear reducer ratings in this catalog are based upon single speed operation of the gear unit. When selecting gear drives for multi-speed or variable speed applications, determine the speed at which the greatest torque is developed and make the initial selection of the gear drive on that basis.

The following information is essential in order for NORD to verify adequate oil distribution, thermal capacity and whether or not there is any need for an oil distribution system or special cooling options:

- Indicate the operating speed requirements and gear ratio.
- Provide the minimum and maximum speeds along with the speed duration cycles.

NORD Gear specifies different oil levels for various gear reducer sizes, speeds, ratios and mounting positions; If one intends to operate an existing gear drive at a different speed from those shown on the nameplate, the full application and nameplate information must be reviewed by the factory.

## Brake Equipped Applications

When a brake is either supplied between the motor and the prime mover or included with a motor, the gear drive must be selected by either the brake's rating or the highest equivalent input power, whichever is greater. If the brake rating is higher than 200% of the rated gear unit capacity or if the brake is located on the output shaft of the gear drive, the application should be reviewed by the factory.

Protection against Moisture

## Wet or Damp Outdoor Installation

Special seals and anti-corrosion measures are required for installation outdoors, in wet or damp environments or in tropical climates.

## Exposure to Solar Heating

If a drive is exposed to radiant or solar heating, while operating in the sun at ambient temperatures of 104°F (40°C) or higher, then special protection measures are recommended. This protection can consist of a canopy over the gear drive or reflective paint on the gear drive. If neither is possible, a heat exchanger or other cooling device may be required.

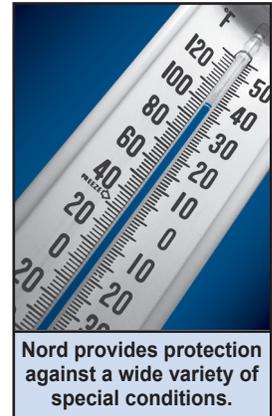

Protection against Solar Heating

## Special Conditions

Consideration must be taken during unit selection when special environmental or extraordinary conditions are present during transportation, storage or operation. Please consult NORD for assistance. Special conditions may include (but are not limited to):

- Exposure to aggressive corrosive materials (contaminated air, gasses, acids, bases, salts, etc.).
- Exposure to very high relative humidity (installed outside, in damp rooms, or used in tropical environments).
- Direct contact between the motor and liquid.
- Material build-up on the gear unit or motor (dirt, dust, sand, etc.).
- High atmospheric pressure.
- Radiation exposure.
- Extreme high or low temperatures or large temperature fluctuations.
- High vibration, rapid accelerations or decelerations, shock or impact.
- Other abnormal conditions

## Special Applications

Severe operating conditions typically apply for gear drive applications such as agitators, mixers, ventilators, fans, and cooling towers.

Often these applications may involve one or more of the following operating conditions:

- 24-hour continuous operation at or near full-load motor power or full-load torque.
- A large inertia or moving mass at the reducer output with a small gear ratio generating very high load conditions at the reducer's input.
- Vibrations may be common, such as those found when an external drive chain or belt is used.
- A direct gear drive connection to a mixer or fan shaft that produces high oscillating and bending movements as well as high load forces to the reducers drive shaft and internal bearings.
- Vertical reducer configuration is needed & special reducer options are often necessary.
- Outdoor installation (i.e. humidity and aggressive media, as well as sudden changes in temperature with the possibility of condensation).
- A high degree of environmental protection is required (special sealing, biodegradable oil, special maintenance and servicing needs, low noise, etc.).

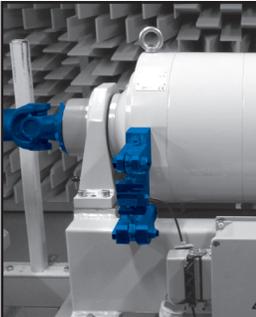

NORD has experience with many unique applications and has developed a package of design options in order to meet these requirements. Please consult NORD when selecting a gear unit for special applications.

## Storage Before Installation

The gear units and motors should be stored in a dry area before they are to be installed. Special measures are required for longer storage. Please request long term storage instructions from NORD Gear or from the NORD web site.

## Gear Reducer Ratings

A torque dynamometer set up for operation in our test facility

The permissible continuous power limit of gear reducers is limited by both the mechanical rating and the thermal rating. The mechanical rating depends upon the material strength of the gear reducer's gears, bearings, housing, shafts, etc. The mechanical input power limit to the reducer is also a function of the mechanical power rating divided by the relevant reducer service factor.

The thermal rating or thermal limit depends upon the amount heat generated within the reducer and is influenced by a variety of factors including:

- Churning or splashing losses in the lubricant which depend upon reducer type, ratio, input style, mounting position or oil fill-level, and the circumferential travel velocities of the gear wheels.
- The actual speed and load conditions. These factors determine load-dependent losses in the gears and frictional losses in the gears, bearings and seal areas.
- Ambient Conditions:
  - Ambient Temperature.
  - Amount of free air circulation around the drive.
  - Possible near-by heat sources.
  - Heat dissipation or the ability of the reducer to transfer heat through the housing, shafts, and the mating sub-structure or mounting surface.

## Observing the Reducer's Thermal Limit

### When to Contact NORD

Through computer program analysis NORD can evaluate application conditions and the impact they have on a reducer's thermal capacity.

When applying helical in-line, Clincher™ shaft mount, & helical-bevel gear units of case sizes 6 & larger (SK62, SK6282 and SK9072.1 and larger), consult NORD if any two or more of the following conditions apply:

- Gear ratio,  $i_{total} \leq 24:1$  or  $\leq 48:1$  for helical-bevel units
- Input power,  $P_1 \geq 60$  hp (45 kw)
- Input speed,  $n_1 > 1800$
- Vertical positioning (mounting position M2 or M4)
- Input configuration: NEMA C-face, IEC, servo adapter or solid-shaft input (Type-W)
- Elevated ambient temperature  $\geq 86^\circ$  F ( $30^\circ$  C)

Advise NORD of any special application considerations:

- Confined space or limited air circulation
- Exposure to other near-by radiant heat sources
- Dirty or dusty environments
- High altitude operation  $> 3,280$  ft (1000 m) a.s.l.

Special considerations may be taken for operation in extreme thermal environments

## Dangers of Reducer Overheating

The following problems may result when a reducer’s thermal capacity or maximum oil sump temperatures are exceeded:

- Lubrication oxidation, breakdown & deterioration.
- A decrease in lubrication viscosity & film thickness.
- Loss of critical bearing and gear clearances required for proper lubrication.
- Increased contact pressures & increased operating temps. in the critical load zones of the gearing and bearings.
- An increased possibility for metal-to-metal contact and premature component wear.
- A significant reduction in the lubricant’s ability to prevent scuffing, pitting, and in extreme cases galling or welding.

## Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer’s maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation, depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85 °C (176-185 °F)	95 °C (203 °F)
Synthetic	105 °C (220 ° F)	107 ° C (225 ° F)

## Measures to Expand the Application Range

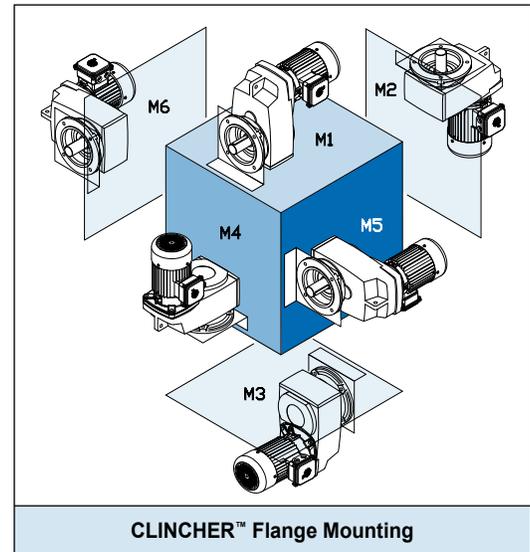

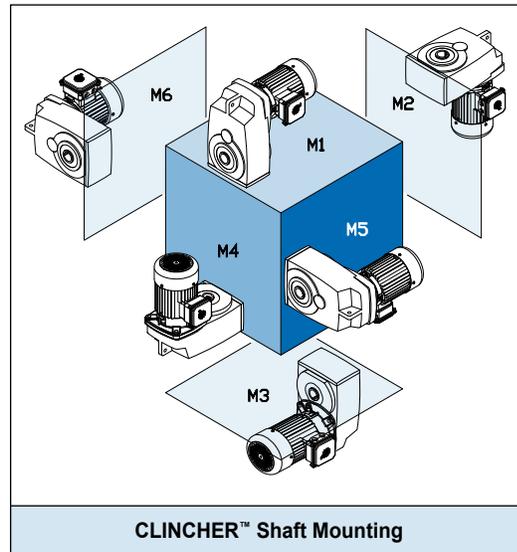

There are a variety of measures that may be taken in order to protect against thermal overload and expand the application range of the gear reducer. Common examples include the following:

- Recommending a change in lubrication viscosity and/or a specific synthetic lubricant type.
- Applying high-temperature seals.
- Increasing air flow around the gear unit.
- Protecting the reducer from high heat sources.
- Considering an integral motor instead of the bolt-on input assembly covers. In many cases the motor fan will substantially increase air-flow around the gear unit.
- Add an Oil Expansion/Overflow Chamber (Option “OA”) or an Oil Reservoir (Option “OT”).
- Oil Cooler (Option “OC”).
- Water Cooling Cover (Option “WC”)

## Mounting Positions

The reducer mounting position determines the approximate oil fill level and the appropriate vent location. In some cases mounting position may dictate possible variation in final reducer assembly. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering.

## Mounting Configuration

NORD provides gearmotors, speed reducers and motors that can be configured very flexibly to suit customer needs. When ordering it is beneficial that the drive be specified exactly the way you want it delivered.

## ATEX Definitions

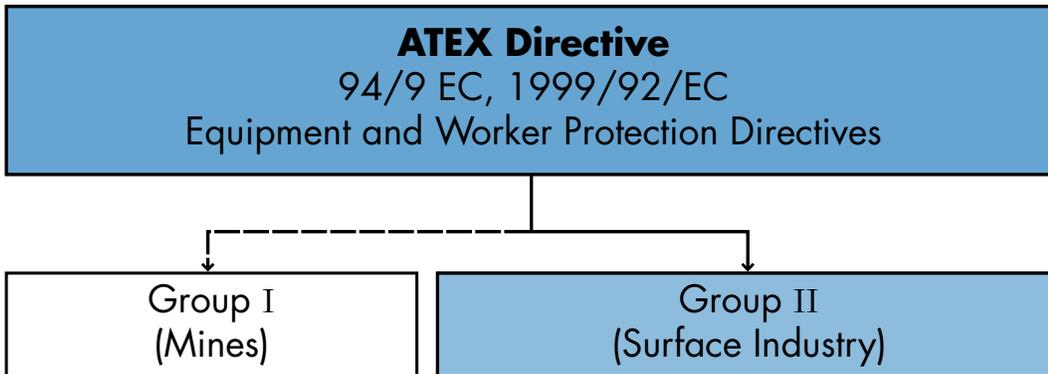

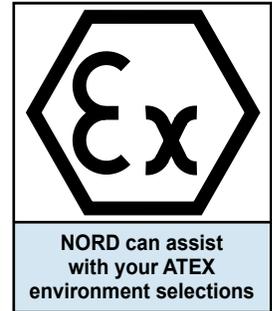

### Group

The ATEX directive distinguishes between two equipments groups. Group I applies to equipment intended for use in mines and Group II applies to all other areas or the surface industry. NORD offers drives for Group II.

### Category

The equipment category distinguishes the level of equipment protection needed and if the protection is for gas-air or dust-air mixtures. ATEX distinguishes three category levels; 1, 2 and 3 based upon the duration of exposure to a potentially explosive atmosphere with category 1 being the most dangerous.

Following the category number is a letter G for gas or D for dust. If dust-air hazards are present, the dust must be classified as electrically conductive or electrically non-conductive. NORD offers drives for categories 2G, 2D, 3G and 3D for both conductive and non-conductive dust areas.

### Zones

ATEX guideline 1999/92/EC requires plant operators and approved authorities to classify places at the workplace where explosive atmospheres may occur into hazardous or non-hazardous areas. Hazardous areas are further divided into zones. Atmospheres with gas-air mixtures are divided into zones 0, 1, and 2 with zone 0 being the most hazardous. Atmospheres with dust-air mixtures are divided into zones 20, 21, and 22 with zone 20 being the most hazardous.

The relationship between workplace Zones and equipment Categories is defined in the table below.

Zone (workplace)	Category (equipment)	Atmospheric Hazard	Definition	Exposure (hrs/year)	Does NORD offer drives?
0	1G	Gas	Explosive atmosphere is present continuously or frequently due to malfunctions.	> 1000	No
20	1D	Dust			
1	2G	Gas	Explosive atmosphere is present occasionally or due to anticipated malfunctions.	10 - 1000	Yes
21	2D	Dust			
2	3G	Gas	Explosive atmosphere is unlikely to occur in normal operation & if it occurs, it will be for a short period of time.	< 10	Yes
22	3D	Dust			

## Production Type

Following the equipment category in the explosion protection declaration is the lower case letters that indicate the exact protection type of the equipment. Depending on the zone and equipment category different solutions are possible.

Motors:	
Flameproof enclosure	d
Increased safety	e
Non-sparking	n

Gear Units:	
Constructional safety	c
Liquid immersion	k

### Flameproof Enclosure “EEx d”

Flameproof motors are designed with stronger walls and specific ignition gaps to prevent internal explosions from transmitting to the surrounding atmosphere. Flameproof motors are frequently used for inverter operations, brakes, encoders and when a very high degree of safety is required. Specifically flameproof motors:

- Have housings that can withstand internal explosion pressures
- Have ignition gaps designed to dissipate the pressure arising from an internal explosion
- Are designed so that generated hot gases are significantly cooled by the time they escape the motor body so they do not potentially ignite the potentially explosive environment

### Increased Safety “EEx e”

Increased safety motors are designed with higher quality insulation and larger clearances between rotating parts. This prevents sparking as well as high surface and internal temperatures even during motor malfunction. Increased safety motors are less expensive than flameproof motors, but use special windings that generally result in lower performance than flameproof motors.

### Non-Sparking “EEx n”

Non-sparking motors resemble increased safety “e” motors, but do not achieve the same protection level. They do however have the same power output of flameproof motors and can be used in conjunction with approved inverters.

### Constructional Safety “EEx c”

Construction safety for gear units takes into account measures including ignition protection from hot surface temperatures, sparks, moving parts and adiabatic compression even under expected gear unit failures. NORD provides gear units with constructional safety protection.

### Liquid Immersion “EEx k”

Liquid immersion protection type “k” ensures partial or complete submersion in a protective fluid or constant wetting of a potentially combustible surface.

## ATEX Temperature Specification

In a dust-air mixture surface temperature is a critical thermal factor, therefore the maximum surface temperature is declared based upon the dust type that is present. The goal is to keep surface temperatures below the smoldering and ignition temperature of a dust-air mixture. NORD displays a maximum surface temperature on the reducer nameplate, typically 125°C.

Gas-air mixtures are grouped into temperature classes. The following table shows the maximum surface temperature and temperature ignition ranges and the for each temperature class.

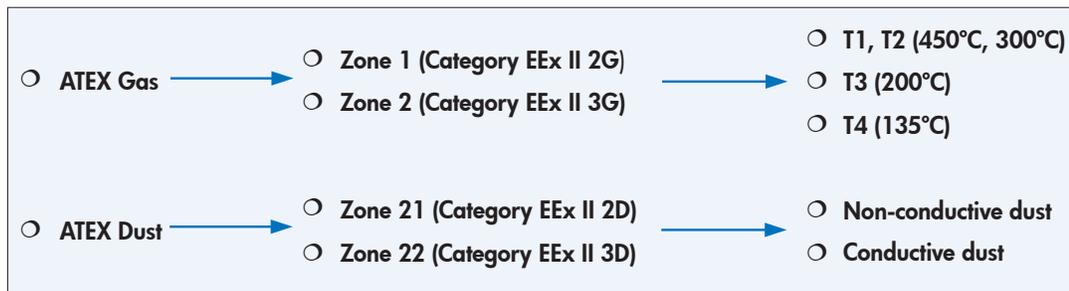

Temperature Class	Maximum Surface Temp. °C	Ignition Temperature °C
T1	450	> 450
T2	300	300 ... 450
T3	200	200 ... 300
T4	135	135 ... 200
T5*	100	100 ... 135
T6*	85	85 ... 100

\* Not satisfied with AC gear drives

## ATEX unit Selection

Since the selection of gear units for hazardous locations requiring ATEX certification can be somewhat confusing, NORD has simplified the process.

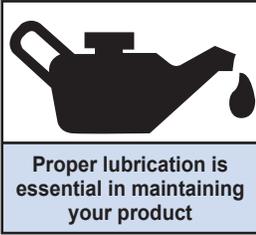

1. Select a gear unit based upon power, speed and service factor
2. Contact NORD to request the ATEX inquiry form. The form is also available at [nord.com](http://nord.com).
3. Fill in the ATEX inquiry form
  - Select the hazard, Gas or Dust
  - Select the zone
  - Select the temperature class (for gas) or select electrically conductive or non-conductive for dust hazards

4. Return the completed ATEX inquiry form found online at
5. NORD engineers will review your selection to ensure it conforms to ATEX guidelines
6. If your selection is approved, customer service will quote the unit. If not, NORD engineers will make additional recommendations.

## ATEX Documentation

ATEX applications require more documentation than gear drive equipment used in non-hazardous locations. Each ATEX certified NORD gear drive undergoes verification to ensure it will safely operate within the limits of the ATEX specification. NORD stores and supply this document to the customer upon request. In addition, ATEX specific operation & maintenance instructions are included with each equipment delivery in the language of the equipment builder and end user.

Proper lubrication is essential in maintaining your product

## The Importance of Proper Lubrication

Proper gearbox lubrication is essential in order to reduce friction and component wear, and protect against corrosion and rust. Gear lubricants reduce heat and wear by inserting a load-sharing “protective fluid film” between mating parts and preventing direct metal to metal contact. Properly selected lubricants will operate under various film conditions, improve heat transfer, optimize reducer efficiency, absorb shock loads, reduce noise, inhibit foaming, and separate water readily.

## Design Considerations

Along with many other factors, the gear designer must consider the type of gearing (helical, bevel, worm, etc.), the gear load and speed conditions, and the expected operating oil temperatures. These factors help determine a generally suitable oil category, a desired additive package, preferred base-oil type, and oil viscosity.

It is important that the consumer be aware of these many design factors before making any changes in the critical areas (oil category, base-oil type, viscosity, etc.) One should consult their preferred lubrication supplier or NORD Gear when questions arise.

## Gear Oil Types, Categorized by Base Oil

### *Mineral Oil with an EP Additive (DIN 51517, Type CLP)*

High performance mineral gear oils are carefully engineered and manufactured to improve aging characteristics, minimize friction, offer good wear protection, provide corrosion and oxidation resistance, minimize foam, and separate water. Mineral gear oils are classified as API Group I or II oils, depending upon viscosity.

The standard NORD mineral gear oil has an extreme pressure (EP) additive ISO Viscosity Grade EP220 (AGMA 5 EP) and is generally acceptable for helical and helical-bevel gear units. Good quality mineral oil should have the ability to operate at moderate sump temperatures (up to 80-85 °C) without losing viscosity or thickness. A minimum viscosity index (VI) of 93 or higher is suggested. The oil must also have good film strength to handle shock loads, high torque, and start-up conditions. A minimum FZG Scuffing Load Stage 12 is desirable.

### Advantages:

- Most economical of all the gear oil types.
- Offers good compatibility with shaft seals, gaskets, paint finishes, etc.
- Offers good corrosion and oxidation protection.
- Effectively reduces internal friction and wear.

## **Synthetic Oils**

Synthetic gear oils are suggested when mineral gear oils have reached their performance limit or when they no longer meet certain application requirements. NORD may recommend synthetic oil for any one of the following conditions:

- Severe duty applications or when gears are exposed to frequent starts and stops, high-load or shock.
- For applications in low or high temperature service.
- To extend oil service interval requirements.
- To eliminate the necessity for seasonal oil changes.
- To extend service life of factory-sealed or maintenance-free gear units.
- To take advantage of performance benefits: shear resistance, low traction coefficient, reduced internal friction, improved lubricity, reduced operating temperatures, improved gear efficiency, etc.

### **Advantages:**

Compared to mineral oils, synthetic oils provide several performance advantages including:

- Ability to operate at higher temperatures without losing viscosity or thickness, due to a much improved viscosity index.
- Improved low-temperature stability due to a lower pour point
- Increased oil change intervals due to superior oxidative and wear resistance
- Lower tendency to form residues and increased resistance to foaming.
- Other benefits may include: very good shear resistance, low traction coefficient, reduced internal friction, improved lubricity, reduced operating temperatures, improved gear efficiency, and extended component life and wear protection.

When application conditions warrant the use of synthetic oil, NORD may suggest a particular type of synthetic oil, depending upon the gear unit type and the application.

### **Synthetic Hydrocarbon/Polyalphaolefin Oil (DIN 51517, Type CLP-HC)**

Synthetic Hydrocarbons (SHC) or Polyalphaolefin (PAO) synthetic base oils offer good miscibility with mineral base oils and are very readily available. SHC/PAO oils are classified as API Group IV oils. They can be formulated with or without anti-wear (AW) or extreme pressure (EP) additives. They can also be formulated for acceptance in food-grade applications.

### **Advantages:**

- Higher viscosity index and therefore greater high-temperature stability than mineral oil.
- Better low-temperature stability and lower pour point than mineral type gear oils
- High surface tension and lower tendency to foam compared to mineral oil, and water-soluble polyglycol gear oils.
- Compatible (miscible) with mineral oil.
- Better water separability demulsibility than PG oils.

## ***Polyalkylene Glycol or Polyglycol Synthetic Oil (DIN 51517, Type CLP-PG)***

Polyalkylene glycol or polyglycol (PAG or PG) synthetic gear oils are made readily available through many lubrication suppliers. PG oils are classified as API Group V gear oils. They can also be formulated for acceptance in food-grade applications.

PG gear oils possess extremely low traction coefficients and a viscosity index higher than any of the other synthetics (often greater than 220 VI), resulting in excellent heat resistant, shear stability, and natural anti-wear properties.

Typical PG gear oils are formulated with a 1:1 or higher ratio of ethylene oxide to propylene oxide (50:50 or 60:40 is common); this makes PG gear oils water soluble, providing them with very good corrosion resistance even when water is present in concentrations that are higher than what is normally allowed.

### **Advantages:**

- PG oils offer the highest viscosity index of any other synthetic resulting in excellent heat resistant, shear stability, and superior natural anti-wear properties without requiring EP-additives.
- PG gears oils minimize internal friction and often result in improved gear efficiency.
- PG oils have significantly higher film strength than mineral and SHC/PAO oils and out perform these oils at higher operating oil temperatures (approaching 80°C or higher).

### **CAUTION**

Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil, hydrosynthesized synthetic or PAO synthetic oils.

### ***Food-Grade Lubricants***

Food-grade lubricants should be manufactured in compliance with FDA 212 CFR 178.3570 and should either satisfy the former 1998 USDA Guidelines as an H1 lubricant or currently qualify as a NSF-H1 lubricant. Please consult with lubrication manufacture for more information or visit [www.nsf.org](http://www.nsf.org)

H1 food grade oil can only contain additives which appear on the FDA “approved list” for food safe compounds. H1 oils are generally absent of common zinc-based AW additives, and sulfur-phosphorus based, EP chemistries, commonly found in many industrial gear oils. Food manufactures control risk and liability by following detailed guidelines outlined by the HACCP (Hazard Analysis and Critical Control Point) program, which includes food-grade H1 lubricants. Food grade H1 lubricants may be formulated as highly refined mineral oils (white oils), SHC/PAO synthetic oils or PG synthetic oils.

The highly refined nature of good-quality food-grade white-oils provides good long-term oxidative stability and in most cases adequate lubrication under high-load (boundary) conditions. So long as food-grade white oils meet the minimum anti-wear requirements of the normally specified non-food grade oil, they are often acceptable. Both food-grade white oils and PAO’s have an inherent “purity” and absence of polar compounds, making them better than the average mineral oil or even PG oil in terms of demulsibility (water seperability).

### **Advantages:**

Compared to food-grade white-oils, food-grade synthetic PAO or PG oils typically provide:

- Better wear and oxidation resistance.
- Improved high-temperature characteristics.
- Better cold-temperature behavior.

## The Importance of Oil Viscosity

Viscosity or the oil's resistance to shear under load, is often considered the single most important property of any gear oil.

NORD Gear Designers have selected the most appropriate ISO viscosity grade of oil, for each type or class of gear reducer. Gear oil viscosity is selected by assuming typical ambient conditions, at rated speed and load conditions.

### Important Considerations:

- The correct viscosity selection helps provide proper lubrication and assures that a minimum film thick-ness is maintained between interacting surfaces.
- The degree to which viscosity changes with temperature or the viscosity index, varies from oil to oil, and depends upon the type of lubricant and additive agents used.
- Selecting too low of a viscosity can result in mixed-boundary (partial metal-to metal contact) or boundary lubrication (full metal-to-metal contact) conditions, increasing internal friction heat build-up and wear.
- Selecting too high of a viscosity results in increased churning and squeezing losses in the load zone and excessive heat (especially when peripheral gear speeds are high); Ultimately, this causes the oil temperature to rise and the viscosity to go down, decreasing the effectiveness of the lubricant.

### Considering an Oil Viscosity Change

There are three primary reasons to consider a lubrication viscosity change as follows:

1. Low temperature gear oils should be selected so that the pour point is at least 9°F (5°C) lower than the expected minimum ambient temperature. In extreme cases, consider a lower ISO Viscosity rating and test the critical performance of the gear box under cold start-up.
2. High temperature applications may require an increase in the lubricants viscosity to assure proper lubrication conditions in the critical load zones of the gear unit. NORD also recommends switching to synthetic oil if oil sump temperatures exceed 176-185 °F (80-85 °C).
3. In cases of extreme load conditions, gear pairs and antifriction bearings may be more susceptible to scuffing wear. In these operating conditions, it may be beneficial to consider an increased lubrication viscosity and/or lubrication with improved antiwear additive packages.

NORD recommends that the user consult with their primary lubrication supplier when considering changes in oil viscosity.

### Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation, depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85 °C (176-185 °F)	95 °C (203 °F)
Synthetic	105 °C (220 ° F)	107 ° C (225 ° F)

## Lubrication Types

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective “fluid boundary” between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

Mounting position not only determines the proper fill-level but may also have some effect on final reducer assembly. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering. Unless otherwise specified, NORD supplies most all gear units (\*) factory-filled with the standard lubrication type and the appropriate amount of lubricating oil.

\* Gear units SK10382, and SK11382 are supplied without oil.

Standard Oil Lubricants				
ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG220	MIN-EP	0 to 40°C (32 to 104°F)	Mobilgear 600XP220	①
	PAO-EP	-35 to 60°C (-31 to 140°F)	Mobil SHC Gear 220	②
	FG	-5 to 40°C (23 to 104°F)	Fuchs FM220	③

## Optional Oil Lubricants

ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG460	PAO-EP	-35 to 80°C (-31 to 176°F)	Mobil SHC Gear 460	-
	FG-PAO	-35 to 80°C (-31 to 176°F)	Mobil SHC Cibus 460	-
VG220	FG-PAO	-35 to 60°C (-31 to 140°F)	Mobil SHC Cibus 220	③
VG150	PAO-EP	-35 to 25°C (-31 to 77°F)	Mobil SHC Gear 150	-

## Grease Options (applied to greased bearings and seal cavities)

NLGI Grade	Grease Thickeners	Grease Base Oil	Ambient Temperature Range	Manufacturer Brand/Type	Notes
NLGI 2	Li-Complex	MIN	-30 to 60°C (-22 to 140°F)	Mobil Grease XHP222	①
	Li-Complex	PAO	-40 to 80°C (-40 to 176°F)	Mobil / Mobilith SHC 220	②
	Polyurea	FG-PAO	-30 to 80°C (-22 to 176°F)	Mobil SHC Polyrex 222	③

### ③ Stocked Lubricants

- ① Standard product on serviceable gear units
- ② Standard product on maintenance free gear units ordered with and on units ordered with synthetic gear oil.

### Oil Formulation Codes

MIN-EP	Mineral Oil with EP Additive
PAO	Synthetic Polyalphaolefin Oil
PAO-EP	Synthetic Polyalphaolefin Oil with EP Additive
FG	Food-Grade Oil
FG-PAO	Food-Grade, Synthetic Polyalphaolefin Oil

⚠

### IMPORTANT NOTES

⚠

- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacture for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility & to obtain recommended cleaning or flushing procedures.
- Do not mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil, or Polyalphaolefin (PAO) oil.
- Please Consult NORD if considering cold-temperature oils below an ISO Viscosity VG100 or lower.

## Ventilation

Most gear reducers (except for SK0182NB, SK0282NB and SK1382NB) are equipped with a vent which helps compensate for air pressure differences between the inner space of the gear unit and the atmosphere.

The spring-pressure vent (AUTOVENT™) is commonly supplied and factory-installed. Normally open vents may also be supplied as an option; normally-open vents are closed upon delivery in order to prevent oil leakage during transport. When normally open vents are supplied, the sealing plugs must be removed prior to commissioning the reducer.

Prior to reducer start-up, it is important to check the maintenance manual to verify that the vent is properly located with respect to mounting position.

## Mounting Position

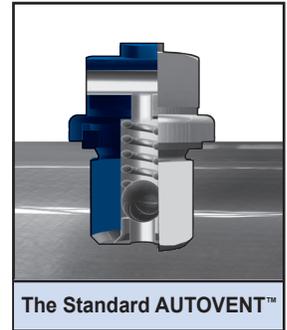

The reducer mounting position determines the approximate oil fill-level and the appropriate vent location. In some cases mounting position may dictate possible variation in final reducer assembly.

If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering.

## Oil Fill Quantities

Oil fill quantities shown in the catalog or maintenance instructions are approximate amounts. The actual oil volume varies depending upon the gear ratio. Prior to commissioning the reducer, the oil-fill level should be checked using the reducer's oil-level plug. It may be necessary to drain excess oil or add additional oil.

Unless otherwise specified, NORD supplies most all gear units factory-filled with the standard lubrication type per the specified mounting position. Gear units SK10382.1, and SK11382.1, are supplied without oil.

## Lubrication Replacement

If the gear unit is filled with mineral oil, the lubricant should be replaced at least after every 10,000 operating hours or after every two years. If the gear unit is filled with synthetic oil, the lubricant should be replaced at least after every 20,000 operating hours or after every four years.

Often gear reducers are exposed to extreme ambient conditions, hostile environments, wet conditions, or dirty and dusty operating areas. Especially in these situations, it is important to change the reducer lubricant more often than what is suggested as a typical guideline.

## The Importance of Routine Oil Analysis

Routine oil analysis, sound lubrication practices, and good tracking of oil performance trends as related to specific equipment, will help establish proper lubrication maintenance and change-out intervals.

To maximize equipment reliability, NORD Gear generally recommends a condition-based lubrication maintenance program. One may take exceptions to this general recommendation on sealed-for-life or maintenance-free gear units or smaller and less costly gear units. In these instances, the replacement cost of the gear unit is often small compared to the costs associated with this type of oil analysis program.

NORD suggests replacing the gear oil if oil analysis indicates any of the following:

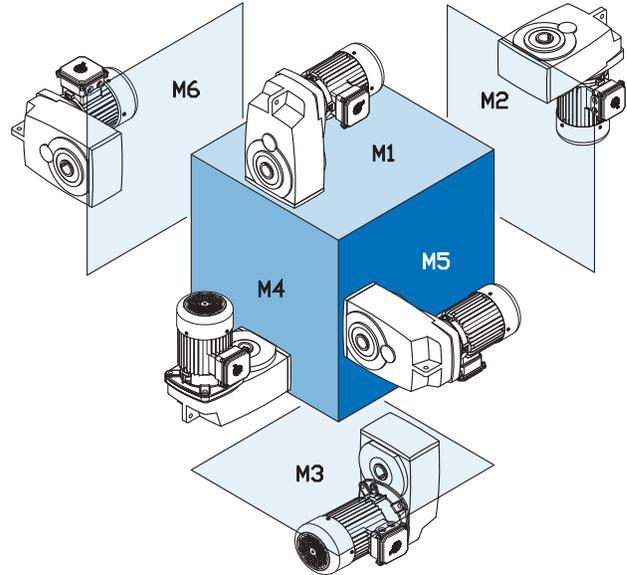

- Viscosity has changed by approximately 10% or more.
- Debris particles (silicon, dust, dirt or sand) exceed 25 ppm.
- Iron content exceeds 150-200 ppm.
- Water content is greater than 0.05% (500 ppm).
- Acid number tests indicate a significant level of oxidative break-down of the oil and a critical reduction in performance.

# CLINCHER™ Mounting Positions & Oil Fill Quantities

## CLINCHER™ lubrication

Unless otherwise noted below, the following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the “Oil Plug & Vent Locations” documentation for your gear unit.

STOP
HARMFUL SITUATION
STOP

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer’s oil level plug and drain or add additional oil as needed. The minimum acceptable oil level is 0.15 in (4 mm) below the oil level hole.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

# CLINCHER™ Oil Plug & Vent Locations

## Oil plug connections

Prior to commissioning the reducer, check the oil-fill level using the reducer's oil-level plug and drain or add additional oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole. **For mounting orientations other than shown please consult NORD Gear. New plug locations may be required.**

Engineering

▽ = Vent      ▼ = Oil Level      ■ = Oil Drain

\* Oil level for 3 stage units

\* Oil level should be verified using the dip stick located in the oil tank for the M4/H5 position.

## Radial Overhung Load (OHL)

Any radial force or side force applied to the reducer shaft is a source of OHL and should be examined during the reducer selection process. An overhung load is radial a force that pulls (or pushes) against the reducer's output (or input) shaft.

OHL is produced by one or more of the following conditions:

- Transferring power at a right angle to the reducer's shaft, through an externally mounted power transmission device, such as a belt pulley, chain sprocket, or gear.
- By tensioning of the external belt or chain, which is required to keep belts from slipping, or to assure proper chain wrap around sprockets.
- The hanging weight of a pulley, sprocket or gear, mounted on the reducer shaft.

$F_{OHL}$  = Applied overhung load condition at output shaft [lb]

$F_{OHL1}$  = Applied overhung load condition at input shaft [lb]

## OHL Rating – General Conditions

The catalog OHL ratings are based upon the following:

- The applied OHL is at the midpoint of the shaft.
- The worst-case direction of shaft rotation.
- There are no axial or thrust load conditions applied to the reducer shaft.

The above conditions apply whether or not one is evaluating the output shaft or input shaft OHL conditions.

## Output Shaft OHL Rating

The maximum permissible output shaft OHL rating is found in the gearmotor selection tables. Output shaft OHL ratings apply to integral gearmotors, C-face reducers, and reducers with solid input shaft.

This is done by identify the power of the gear unit's driving motor or prime mover, and then using the selection tables to match the output shaft OHL rating with the selected gear unit type, power, ratio and output speed condition.

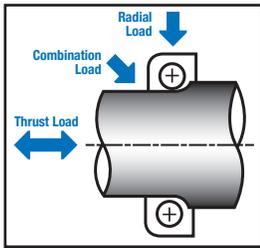

$F_R$  = Output shaft OHL rating, at shaft center [lb]

## Input Shaft OHL Rating

Input shaft (Type W) OHL ratings are given on page 34 and are represented by unit type and input power.

$F_{R1}$  = Input shaft OHL rating, at shaft center

# Radial Overhung (OHL) & Axial Thrust Loads

## Axial Load or Thrust Load

Loads that are directed towards or away from the gearbox, along the axis of the shaft, are considered to be axial loads and are more commonly called thrust loads. Thrust loads can result from the following conditions:

- There is a hanging weight connected to the reducer shaft. This is common in mixer applications.
- While operating the equipment, a net axial force is directed towards or away from the reducer, along the shaft axis. This is common in many screw conveyor or mixer applications.

$F_{\text{THRUST}}$  = Applied axial thrust load condition at output [lb]

$F_{\text{THRUST1}}$  = Applied axial thrust load condition at input [lb]

## Thrust Rating – General Conditions

The published thrust ratings are based upon the following:

- The thrust capacity shown represents the worst case, and is independent of direction.
- Application loads can not exceed the values shown in the tables.
- There is no applied overhung load on the shaft.

## Output Shaft and Input Shaft Thrust Rating

The output shaft thrust capacity can be found in the gearmotor selection tables, adjacent to the OHL ratings.

$F_A$  = Output shaft thrust rating [lb]

$F_{\text{AVL}}$  = Output shaft thrust rating with radial (VL) bearing upgrade [lb]

The input shaft thrust capacity is given on page 34.

$F_{\text{A1}}$  = Input shaft thrust rating [lb]

### IMPORTANT NOTE

To validate the gear unit selection, assuming negligible OHL, the applied thrust condition must be less than the shaft thrust rating.

## Combined OHL and Thrust Load Conditions

Published values for both overhung load and thrust capacity are based upon the presence of a single condition and assume the other condition is absent from the application. In many applications, it is feasible to have both overhung load and thrust at the same time.

*Please contact NORD for more exact examination of the application, when both OHL and thrust conditions exist at the same time.*

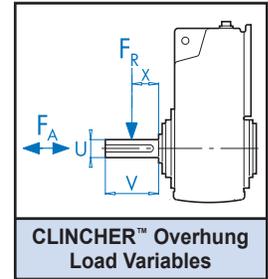

## 1. Calculate the applied OHL at the designated shaft

The most common radial OHL forces are created by transferring power at a right angle to the reducer's shaft, through an externally mounted power transmission device, such as a belt pulley, chain sprocket, or spur gear.

Included in the overhung load formula is an additional factor that is called the power transmission component factor ( $f_z$ ). The ( $f_z$ ) factor accounts for the extra radial force caused by proper tensioning of belts or chains or the additional forces created by the action of meshing gears.

The following equations are used to calculate the OHL forces generated by a belt pulley, chain sprocket, or spur gear and they also account for the extra radial force caused by proper tensioning of the transmission component. These equations treat the hanging weight of the transmission component as being negligible.

### Variable definitions

- $F_{OHL}$  = Calculated shaft overhung load at output
- $F_{OHL1}$  = Calculated shaft overhung load at input
- $T_2$  or  $T_1$  = Load Torque [lb-in]
- $n_2$  or  $n_1$  = Shaft speed [rpm]
- $P_1$  = Load power at input
- $h$  = Gear reducer efficiency [%] ❶
- $d_{OHL}$  = Pitch diameter of power transmission component [in]
- $f_z$  = Power transmission component factor

❶ Gear reducer efficiency can generally be ignored unless considering compounded gear units.

### Output shaft equations

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z \text{ (common equation)}$$

$$F_{OHL} = \frac{2 \times P_1 \times 63025 \times \eta}{n_2 \times d_{OHL} \times 100} \times f_z \text{ (alternate equation)}$$

### Input shaft equations

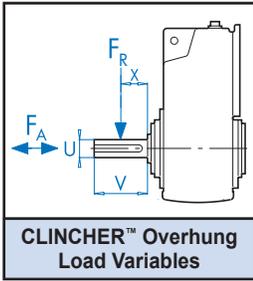

$$F_{OHL1} = \frac{2 \times P_1 \times 63025}{n_1 \times d_{OHL}} \times f_z \text{ (common equation)}$$

$$F_{OHL1} = \frac{2 \times T_1}{d_{OHL}} \times f_z \text{ (alternate equation)}$$

### $f_z$ factor table

Transmission Component	Factor $f_z$	Notes
Gear	1.00	17 teeth or less
Gear	1.15	18 teeth or more
Chain Sprocket	1.40	13 teeth or less
Chain Sprocket	1.20	13 to 20 teeth
Chain Sprocket	1.00	20 teeth or more
Timing Belt Pulley	1.50	-
V-Belt Pulley	1.70	-
Flat Belt Pulley	2.50	-

# Radial Overhung (OHL) & Axial Thrust Loads

## 2. Determine the permissible shaft OHL rating

### Output shaft OHL rating

Whether considering an integral gearmotor, C-face reducer, or reducer with solid input shaft, the maximum permissible output shaft OHL rating is found in the gearmotor selection tables. Establish the output shaft OHL rating as follows:

- ❶ First, identify the power of the gear unit's driving motor or prime mover.
- ❷ Then, use the gearmotor selection tables to identify the output shaft OHL rating, by selecting the appropriate gear unit type, power, ratio and output speed condition.
- ❸ Next, identify the output shaft OHL rating.

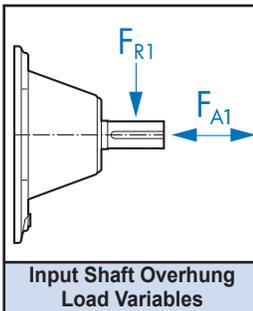

$F_R$  = Output shaft OHL rating, at shaft center [lb]

$F_{RVL}$  = Output shaft OHL rating with radial (VL) bearing upgrade [lb]

### Input shaft OHL rating

Input shaft (W) OHL ratings are below and are represented by unit type and input power.

$F_{R1}$  = Input shaft OHL rating at shaft center [lb]

# Radial Overhung (OHL) & Axial Thrust Loads

### 3. OHL rating correction – applied load is not at the shaft center or midpoint.

If the OHL force is not applied at the midpoint of the shaft, an overhung load rating correction must be applied to the catalog listed OHL rating. This OHL load correction is evaluated in two steps.

**Formula I. Verify the bearing OHL capacity (Formula I).**

**Formula II. Verify the shaft OHL capacity (Formula II).**

#### Overhung Load Variables

- $F_R$  = Output shaft OHL Rating, at shaft center [lb]
- $F_{RVL}$  = Output shaft OHL Rating, at shaft center with radial (VL) bearing upgrade [lb]
- $F_{R1}$  = Input shaft OHL Rating, at shaft center [lb]
- $F_{RX}$  = Standard Bearing Capacity Rating, with OHL applied at output shaft location “x” [lb]
- $F_{RXVL}$  = Radial (VL) Bearing Capacity Rating, with OHL applied at the output shaft location “x” [lb]
- $F_{RX1}$  = Input Shaft Bearing Capacity, with OHL applied at Input shaft location “x” [lb]
- $F_{RXW}$  = Output shaft OHL Rating, at applied load location “x” with standard bearings [lb]
- $F_{RXWVL}$  = Output shaft OHL Rating, at shaft location “x” with radial (VL) bearing upgrade [lb]
- $F_{RXW1}$  = Input shaft OHL Rating, applied at shaft location “x” [lb]
- $x$  = applied OHL location with respect to shaft shoulder [in]

#### Refer to Calculation Table Below

- $z$  = Factor from table [lb-in]
- $y$  = Internal Geometry Factor from table [in]
- $f$  = Internal Geometry Factor from table [in]
- $c$  = Internal Geometry Factor from table [lb-in]
- $c_{VL}$  = Internal Geometry Factor from table [lb-in]

Make certain to apply the proper table values for the shaft (output or input) that is being evaluated.

#### Formula I – Verifying Bearing Capacity

1. Output shaft (Standard bearings)

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z$$

2. Output shaft (VL bearings)

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z$$

3. Input shaft

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z$$

#### Formula II – Calculating shaft OHL capacity

1. Output shaft (Standard bearings)

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z$$

2. Output shaft (VL bearings)

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z$$

3. Input shaft

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z$$

#### IMPORTANT NOTE

Calculations should always be made in accordance with Formula I (bearing capacity) and Formula II (shaft capacity). The corrected OHL rating (for loads not at the shaft midpoint) will always be the lower of the two limiting values based upon direct application of Formula I or Formula II.

# Radial Overhung (OHL) & Axial Thrust Loads

**Formula I - Output Shaft**

## 4. Compare the applied OHL to the OHL rating

To validate the unit selection (assuming negligible thrust loading), the applied OHL condition must be less than the rated OHL capacity as shown below.

### Output Shaft (standard bearings)

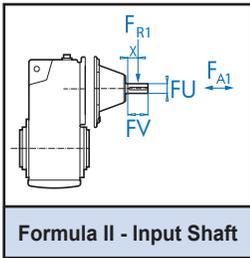

$$F_{OHL} < F_R \quad (\text{OHL at shaft center})$$

$$F_{OHL} < F_{RX} \quad (\text{OHL not at shaft center})$$

### Input Shaft

$$F_{OHL} < F_{R1} \quad (\text{OHL at shaft center})$$

$$F_{OHL} < F_{RX1} \quad (\text{OHL not at shaft center})$$

**Formula II - Input Shaft**

### Output Shaft (VL bearings)

$$F_{OHL} < F_{RVL} \quad (\text{OHL at shaft center})$$

$$F_{OHL} < F_{RXVL} \quad (\text{OHL not at shaft center})$$

### Output Shaft Comparisons

$$\frac{F_{OHL}}{F_{OHL}} < \frac{F_R}{F_R} \quad \text{or} \quad \frac{F_{OHL}}{F_{OHL}} < \frac{F_{RX}}{F_{RX}} \quad (\text{From Step 3})$$

### Input Shaft Comparisons

$$\frac{F_{OHL1}}{F_{OHL1}} < \frac{F_{R1}}{F_{R1}} \quad \text{or} \quad \frac{F_{OHL1}}{F_{OHL1}} < \frac{F_{RX1}}{F_{RX1}} \quad (\text{From Step 3})$$

## 5. Evaluating Thrust Capacity

To validate the unit selection (assuming negligible thrust loading), the applied thrust condition must be less than the rated thrust capacity as shown below.

### Output Shaft

$$F_{THRUST} < F_A$$

### Input Shaft

$$F_{THRUST1} < F_{A1}$$

The output shaft thrust capacity ( $F_A$ ) can be found in the gearmotor selection tables, adjacent to the OHL ratings. The input shaft thrust capacity ( $F_{A1}$ ) can be found in the table on pages 34.

$$\frac{F_{THRUST}}{F_{THRUST}} < \frac{F_A}{F_A}$$

(Supplied by customer)      (Gearmotor Selection)

$$\frac{F_{THRUST1}}{F_{THRUST1}} < \frac{F_{A1}}{F_{A1}}$$

(Supplied by customer)      (Gearmotor Selection)

### IMPORTANT NOTE

Please contact NORD for a more precise examination of the application when both OHL and thrust conditions exist at the same time.

## Computer Program Analysis Capabilities

Upon request, NORD can calculate the bearing service life and check the shaft durability for a specific gear unit type and ratio, if provided with the following:

- Type** = Complete gearmotor or reducer model or type
- i** = Gear ratio
- P<sub>1</sub>** = Load power at input [Hp]
- n<sub>2</sub>** = Operating reducer output speed [rpm]
- F<sub>OHL</sub>** = Applied shaft overhung load [lb]
- F<sub>THRUST</sub>** = Applied thrust load condition [lb]
- DIR** = Applied thrust direction (towards or away) from gear unit.
- x** = applied OHL location with respect to the shaft shoulder [in]
- L10h** = Desired bearing service life L10h [hours]

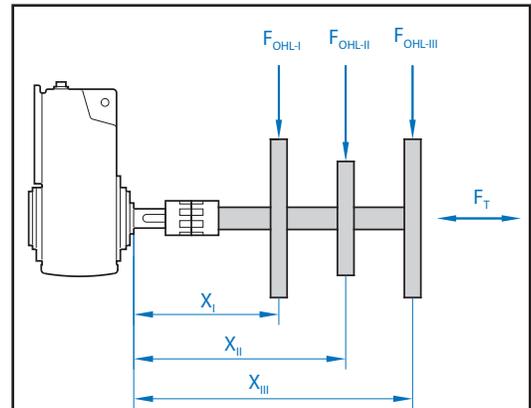

When provided the proper information NORD Engineering can provide detailed analysis using a proprietary calculation program.

## Multiple Impeller Mixer

Multiple impeller mixers are good examples where a computer program analysis is encouraged.

Computer Program Analysis

Multiple Impeller Mixer Example

### IMPORTANT NOTE

In agitator or mixer applications, where multiple impellers are mounted to the same mixer shaft, please provide each individual radial load force (F<sub>OHL</sub>) and location distance (x).

## Mass Acceleration Service Factor

The mass acceleration factor ( $m_{af}$ ) uses a ratio of the load inertia to motor inertia. This method of service factor calculation can be used for both gearmotors and speed reducers and is valid for helical and helical-bevel gear units. For helical-worm units additional factors will need to be taken into account including an ambient temperature factor and duty cycle factor.

Short-term and infrequent torque impulses significantly influence the load and selection of a gear unit. The gear unit service factor,  $f_b$ , takes this and other affects on the gear unit into account.

The mass acceleration factor,  $m_{af}$ , represents the relationship between external low-speed output side and high-speed input side masses. The mass acceleration factor significantly influences the level of torque impulses in the gear unit upon start-up and braking procedures, and upon vibration. The external mass moments of inertia also include the load, such as the material transported on conveyor belts. We ask you to consult with NORD if the  $m_{af} > 10$ , if there is a large play in transfer elements, vibration in the system, uncertainty regarding the load classification, or you are in doubt.

For applications with relatively high external mass moments of inertia,  $m_{af} > 2$  (i.e. travel drives, slewing gears, rotary tables, gear drives, agitators, and surface aerators), we recommend braking torque that does not exceed 1.2 times the rated motor torque. If a higher braking torque is to be used, this must be considered when selecting the gear unit.

1. Calculate mass acceleration factor:

$$m_{af} = \frac{J_{load}}{J_m} \times \left( \frac{1}{\text{reducer ratio}} \right)^2$$

$J_{load}$  = External load inertia including all components of the system outside of the reducer

$J_m$  = Motor inertia. For NORD motors see pages 315 - 334

### If $m_{af} \leq 0.25$ use curve A (uniform operation)

Light conveyor screws, fans, assembly lines, light conveyor belts, small agitators, elevators, cleaning machines, filling machines, inspection machines, belt conveyors.

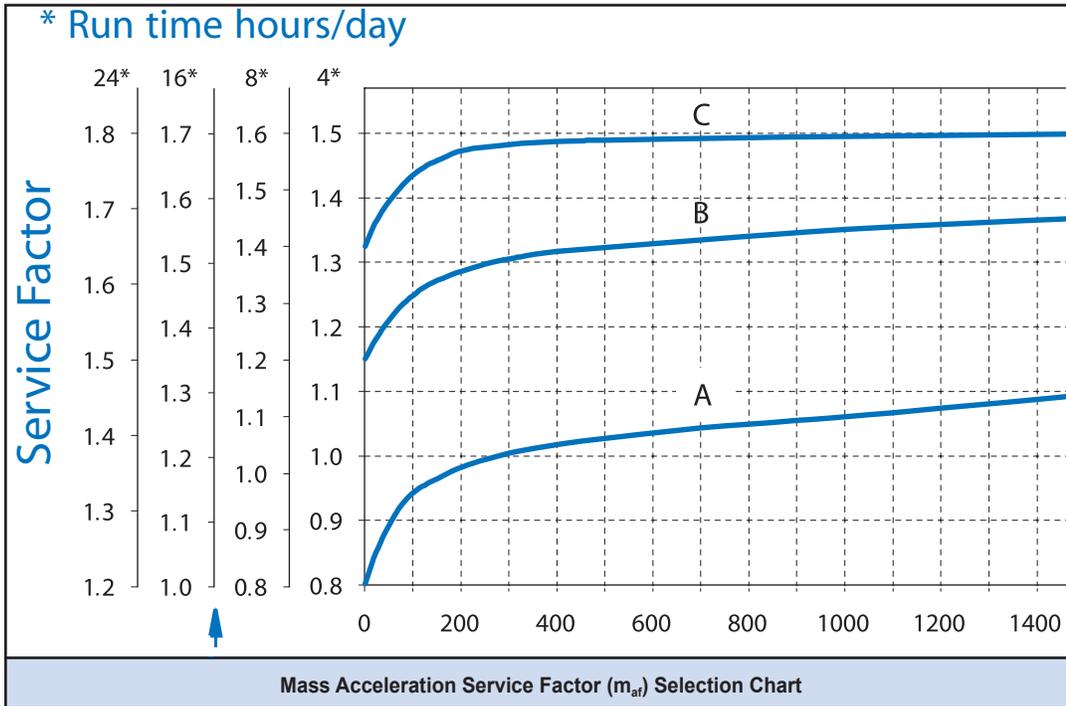

### If $0.25 < m_{af} \leq 3.00$ use curve B (moderate shocks)

Coilers, feed-mechanism drivers for woodworking machines, dumbwaiters, balancing machines, thread cutting machines, medium-sized agitators and mixers, heavy conveyor belts, winches, sliding doors, manure scrapers, packing machines, concrete mixers, overhead crane traveling mechanisms, mills, bending machines, gear pumps.

### If $3.01 \leq m_{af} \leq 10.00$ use curve C (heavy shocks)

Heavy mixers, shears, presses, centrifuges, rolling stands, heavy winches and lifts, grinding mills, stone crushers, bucket elevators, punching machines, hammer mills, eccentric presses, folding machines, roller tables, tumbling barrels, vibrators, shredders.

2. Determine the cycles/hour. A cycle is a start or hard stop, where a hard stop decelerates the motion of the system when a mechanical brake is activated.
3. Determine the run time in hours/day.
4. Using the chart; locate the cycles/hour on the horizontal axis and move vertically up to intersect curve A, B, or C based on the  $m_{af}$ . From the intersection point, move horizontally left to the service factor  $f_b$  based on the run time in hours/day.

### Selection Example:

A smooth running conveyor operates 24 hours/day with 500 cycles/hour.

The calculated  $m_{af} = 0.16$ , therefore use curve A for this type of application.

From the chart, find 500 cycles/hour and follow the axis vertically up until you intersect curve A. From the intersection point, move horizontally left to find the service factor  $f_B = 1.4$  based on 24 hours/day operation. Consult the selection pages of the catalog to find a gearmotor with a service factor  $f_B = 1.4$  or greater.

## AGMA Service Class Selection for Gearmotors and Motorized Reducers

Before a gearmotor is selected, an application class number must be determined. Since application classification represents the normal relationship between gear design power rating and the maximum potential transmitted power, it is suggested that the application class number be applied to the nameplate rating of the electric motor. The application class numbers are I, II, and III. Their relationship to service factor is:

Class Numbers	$f_B$
I	1.0 - 1.39
II	1.4 - 1.99
III	$\geq 2.0$

Application class numbers may be selected from the table. Some operational characteristics that affect an application's classification are:

- **Starting conditions:** Starting conditions where peak loads exceed 200 percent of rated load, applications with frequent starts and stops and reversing applications require special analysis. Rated load is defined as the unit rating with an application class number of I (1.0 - 1.39 service factor).
- **Overloads:** Loads in excess of the rated load are considered overloads. Overload can be of momentary duration, periodic, quasi-steady state, or vibratory in nature. The magnitude and the number of stress cycles require special analysis to prevent low cycle fatigue or yield stress failure. Applications with high torque motors, motors for intermittent operation and applications where extreme repetitive shock occurs or where high-energy loads must be absorbed as when stalling require special consideration.
- **Brake equipped applications:** When a gear drive is equipped with a brake that is used to decelerate the motion of the system, select the drive based on the brake rating or the equivalent power, whichever is greater. If the brake is located on the output shaft of the gear drive, special analysis is required.
- **Reliability and life requirement:** Applications requiring a high degree of reliability or unusually long life should be given careful consideration by the user and NORD GEAR before assigning an application class number. High reliability and life should be addressed by using an increased safety factor agreed to between NORD and the purchaser.

Synchronous motors, certain types of high torque induction motors and generator drives require special analysis. Synchronous motors have high transient torque during starting and restarting after they trip out momentarily.

Induction motors of special high slip design can produce extremely high starting torque. High torque loads are produced when the motor trips out for a very short time and then the trip re-closes.

Generators have extremely high loads when they are out of phase with the main system and when there are across the line short circuits.

Adjustments to the gear drive selection may be necessary when one or more of the following conditions exist:

- Ambient conditions. Extremes of temperature and environment.
- Lubrication. Any lubricant not in accordance with NORD's recommendations.
- Misalignment and distortions due to inadequate foundations.
- Reversing applications.
- High-risk applications involving human safety.

## Service Class Tables

The service class tables provide a guide in the selection and application of gear drives designed and rated in accordance with AGMA Standard 6013-A06.

The service class tables have been developed from the experience of manufacturers and users of gear drives for use in common applications and has been found to be generally satisfactory for the listed industries when gears are applied using AGMA standards. It is recommended that the user and NORD Gear agree upon class numbers for special applications when variations from the table may be required.

#### Notes to GEARMOTOR SERVICE FACTOR table:

- 1) Crane drives are to be selected based upon the gear tooth bending strength using the numeric service factors shown in the table or by analysis such as Miners' Rule. In all cases, the pitting resistance service factor shall be a minimum of 1.0. Contact NORD Gear for selection assistance.
- 2) Service factors for paper mill applications are applied to the nameplate rating of the electric drive motor at the motor rated based speed.
- 3) Anti-friction bearings only.
- 4) A Class Number of I may be applied at base speed of a supercalendar operating over a speed range of part-range constant horsepower and part-range constant torque where the constant horsepower speed range is greater than 1.5 to 1. A Class Number of II is applicable to supercalendars operating over the entire speed range at constant torque or where the constant horse-power speed range is less than 1.5 to 1.

## AGMA Service Factor Selection for Speed Reducers

Before an enclosed speed reducer or increaser can be selected for any application, an equivalent unit power rating (service factor = 1.0) must be determined. This is done by multiplying the specified power by the service factor. Since the service factor represents the normal relationship between the gear unit rating and the required application power, it is suggested that the service factor be applied to the nameplate rating of the prime mover or driven machine rating, as applicable.

NORD Gear and the user must agree upon which power, prime mover rating or driven machine requirements, should dictate the selection of the gear drive. It is necessary that the gear drive selected have a rated unit capacity equal to or in excess of this "equivalent unit power rating".

All service factors listed are 1.0 or greater. Service factors less than 1.0 can be used in some applications when specified by the user and agreed to by NORD Gear.

The service factor tables should be used with caution, since much higher values have occurred in some applications. Values as high as ten have been used. On some applications up to six times nominal torque can occur, such as: Turbine/Generator drives, Heavy Plate and Billet rolling mills.

It has been developed from the experience of manufacturers and users of gear drives for use in common applications. It is suggested that service factors for special applications be agreed upon by the user and NORD GEAR when variations of the values in the table may be required.

Service factors shown are for reducers driven by motors (electric or hydraulic) and turbines (steam or gas) according to AGMA 6013-A06. When the driver is a single cylinder or multi-cylinder engine, the service factors from the table must be modified for the appropriate type of prime mover.

As an example, if the application is a centrifugal blower, the service factor from the reducer service factor table is 1.25 for a motor or turbine. The service factor conversion table changes this value to 1.75 for a single cylinder engine and 1.50 for a multi-cylinder engine.

	<b>CAUTION</b>	
Any user of enclosed gear drives should make sure that the latest available information affecting the selection of a gear drive is used. When better load intensity data is available on the driving or driven equipment, this should be considered when a service factor is selected.		

**Service Factor Conversion Table for Engine Driven Applications**

**Notes to REDUCER SERVICE FACTOR table:**

- 1) Crane drives are to be selected based upon the gear tooth bending strength using the numeric service factors shown in the table or by analysis such as Miners' Rule. In all cases, the pitting resistance service factor shall be a minimum of 1.0. Contact NORD Gear for selection assistance.
- 2) Service factors for paper mill applications are applied to the nameplate rating of the electric drive motor at the motor rated based speed.
- 3) Anti-friction bearings only.
- 4) A Class Number of I may be applied at base speed of a supercalendar operating over a speed range of part-range constant horsepower and part-range constant torque where the constant horsepower speed range is greater than 1.5 to 1. A Class Number of II is applicable to supercalendars operating over the entire speed range at constant torque or where the constant horse-power speed range is less than 1.5 to 1.

$$\text{fpm} = 0.2618 \times \text{Dia}_{(\text{in})} \times \text{rpm}$$

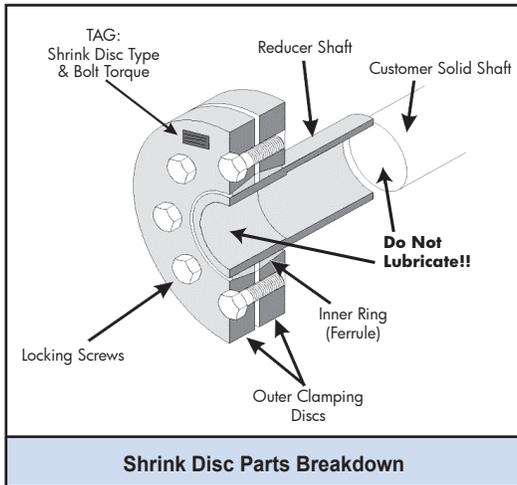

$$\text{rpm} = \frac{\text{fpm} \times 3.820}{\text{Dia}_{(\text{in})}}$$

## Metric M Threads

For metric "M" threads, it is customary to omit the thread pitch for coarse threads. For example, if a thread is called out as an M8 with no pitch shown, it is automatically a coarse pitch thread.

Coarse threads and pitch
M6 x 1
M8 x 1.25
M10 x 1.5
M12 x 1.75
M16 x 2
M20 x 2.5
M24 x 3

# Keyless Shaft Connections Shrink Discs

## Shrink Discs (S & VS)

Shrink discs can be utilized to provide a keyless frictional connection between a gear reducer's hollow-bore and the driven machine shaft. NORD hollow bore gear reducers (Type AZ) can be offered with a Shrink Disc (S) and a Heavy Duty Shrink Disc (VS) and are available in a wide variety of inch and metric bore sizes.. The Heavy Duty Shrink Discs (VS) offer increased clamping force and a higher degree of safety against slippage for severe applications. Standard shrink disc bore sizes are optimized to take full advantage of each gear reducer's maximum rated torque capability and range offered gear ratios. Consult NORD if alternate bore sizes are required.

### NORD Shrink Discs offer a number of advantages

- The resultant high capacity interference fit provides all the positive benefits of traditional interference fits, without the typical assembly and disassembly problems.
- Generous assembly clearances ensure ease of mounting
- Proper assembly tolerances assure connections can be released even after long periods of operation.
- Eliminating the need for keys or keyways results in a stronger solid shaft and eliminates key crushing or pounding failures.
- Shrink disc connections are backlash free, extremely concentric, well-balanced, and ideal for positioning applications, reversing applications, and higher speed applications.
- Shrink discs help eliminate shaft fretting corrosion, by nature of the interference fit achieved upon final assembly.
- Shrink discs provide for easy alignment and simple axial and angular timing of mounted or driven shaft components.

### Shrink Disc Working Principal

By tightening the high-strength locking screws, the outer clamping discs are pulled together and the double-tapered inner ring provides a high-ratio conversion of the clamping loads into radial contact pressure. As the slotted inner ring is contracted, the assembly clearance between the customer solid shaft and the reducer hollow bore is absorbed. The result is a high capacity mechanical interference fit. The working pressures and the frictional bond between the components allow the shrink disc connection to transmit torque and combined loading conditions. Proper design of the mating components assures that the contact pressures are well within the elastic limits of the shrink disc, hollow bore and solid shaft components; therefore, simply loosening the locking screws releases the interference fit and restores the original assembly clearance.

## Shrink Disc Torque Capacity

The shrink disc torque capacity ( $T_{SH}$ ) is displayed in the shrink disc ratings tables on page 57. The transmissible torque capacity of the shrink disc is independent of any axial load or thrust force ( $F_{aSH} = 0$ ). The shrink disc torque capacities are based upon proper mating shaft design. The Shrink Disc Torque Capacity ( $T_{SH}$ ) is calculated without using a safety factor and should be considered the point where a connection could slip if a higher torque is applied. Overload conditions or excessive high torque can cause the shrink disc connection to slip.

## Shrink Disc Axial Force (Thrust) Capacity

Loads directed away from or towards the gearbox along the center axis of the driven shaft are called axial loads or thrust loads. The shrink disc thrust capacity ( $F_{aSH}$ ) is also displayed in the shrink disc ratings tables on pages 57. The presence of a thrust load condition will decrease the torque capacity of the shrink disc. When combined torque and thrust load conditions are present in the driven system, calculations must be completed in order to determine the resultant torque and safety factor against slipping.

## Bending Moment or Radial Load

Bending moments occur when a radial load force acts outside the shrink disc connection. Radial or overhung load forces act in a direction perpendicular to the center rotating axis of the driven solid shaft. Radial load forces that may induce bending moment include: the weight of mounted components, a chain or belt pull, shaft deflections of the driven shaft, etc. Generally the bending moments described change from a positive to a negative value during each shaft rotation and are designated as rotating or reversing bending moments. When there are bending moments acting upon the shrink disc, in addition to the torque and/or axial force, the rated torque and rated axial force of the shrink disc decrease compared to the values listed in the tables. Please contact NORD with application details.

## Shrink Disc Design Considerations

To ensure proper assembly & disassembly there are important shrink disc design considerations.

- The customer's solid shaft end must engage the full length of the reducer hollow shaft.
- The contact areas of the reducer hollow shaft and the mating solid shaft must be lubrication-free.
- The solid shaft and hollow-bore tolerances must be to specification in order to avoid damage or deformation to the shrink disc parts and/or reducer hollow bore.
- Proper solid shaft fit helps assure proper clamping conditions, adequate design safety against slippage, and proper shaft release during disassembly.
- The yield-strength of the driven solid shaft must be at least 52,260 lb/in<sup>2</sup> (360 N/mm<sup>2</sup>), so that the resultant compression forces needed to create adequate friction do not cause permanent shaft deformation.
- The recommend surface finish of the shaft components should be between 32-125 micro-inches (0.8-3.2 micro-meters) in order to ensure adequate friction and clamping forces. Avoid using turned, ground and polished shaft material which can result in a failure of the connection.
- All fastening screws must be of the proper grade and tightened to the specified bolt torque in a circular fashion.
- The seats between the inner ring and outer clamping discs are too be lightly lubricated with molybdenum disulfide ( $MoS_2$ ) grease. The screw threads and head contact area need to be lightly coated with multipurpose grease.

# Keyless Shaft Connections Shrink Discs

## Shaft Tolerances and Assembly clearance

To assure proper clamping forces are maintained and to prevent permanent distortion of the shrink disc components or mating shaft components, the shrink disc assembly tolerances require more precision than keyed shafts or shafts connected with bushing kits. The recommend fit between the hollow shaft and solid shaft and the maximum assembly clearance is tabulated below.

Above Ø (mm)	To & Including Ø (mm)	Solid Shaft Tolerance (ISO 286-2, h6) Ø (mm)	Reducer Bore Tolerance (ISO 286-2, H7) Ø (mm)	Minimum Assembly Clearance (mm)	Maximum Assembly Clearance (mm)

7.1250	7.5000	+0.0000/-0.0011	+0.0018/-0.0000	0.0000	0.0029

### CAUTION

Avoid over-tightening the shrink disc to compensate for excessive assembly clearance, which can result in permanent deformation of the shrink disc clamping components and the reducer's hollow bore.

## Shrink Disc Selection Method

Along with the shrink disc ratings tables on page 57, the following procedures are to be used to verifying that a given gear reducer with shrink disc is sized such that the specified shrink disc has adequate capacity to handle the application loads.

### 1. Select the Gear Unit and Shrink Disc

Record the selected gear unit type. Using the table on pages 57 indicate the shrink disc size or type, and the torque rating. Consult NORD if alternate bore sizes are required.

Gear Unit Type	=	<input type="text"/>
Shrink Disc Type	=	<input type="text"/>
F <sub>T</sub> (Thrust Load)	=	<input type="text"/>
T <sub>SH</sub> (Shrink Disc Torque Rating)	=	<input type="text"/>

### 2. Determine the Application Torque

The application torque at the shrink disc can be calculated as follows:

$$T_2 = \frac{P \times 63025}{n_2}$$

T<sub>2</sub> = Application Torque [lb-in]  
P = Power [HP]  
n<sub>2</sub> = Reducer output shaft speed [rpm]

### 3. Thrust Load

If there is a thrust load (F<sub>T</sub>) present in the system record the value below.

Thrust Load (F<sub>T</sub>) =

### 4. Determine the Resultant Torque

Applications involving simultaneous transmission of torque and additional thrust or bending moment loads require a resultant application torque to be calculated as follows:

$$T_{2R} = \sqrt{(T_2)^2 + \left(F_T \times \frac{UH}{2}\right)^2}$$

T<sub>2R</sub> = Resultant torque at reducer output [lb-in]  
T<sub>2</sub> = Application Torque [lb-in]  
F<sub>T</sub> = Thrust load [lb]  
UH = Driven shaft diameter / Reducer bore size [in]

# Keyless Shaft Connections Shrink Discs

## 5. Check the Safety Factor of the Shrink Disc Connection

Calculate the shrink disc safety (f<sub>SD</sub>) with the formula shown and compare to the specified shrink disc safety factor in the application load classification table.

$$f_{SD} = \frac{T_{SH}}{T_{2R}}$$

f<sub>SD</sub> = Resultant shrink disc design safety factor

T<sub>SH</sub> = Shrink disc torque rating from page 57 [lb-in]

T<sub>SR</sub> = Resultant torque at reducer output from Step 4 [lb-in]

Application Load Classification	Recommended Shrink Disc Design Safety Factor
Uniform Load / No Shock Load	$1.8 \leq f_{SD} < 2.0$
Light to Moderate Shock Load	$2.0 \leq f_{SD} < 2.5$
Heavy Shock Load	$3.0 \leq f_{SD}$

## Shrink Disc Selection Example

### 1. Select the Gear Unit and Shrink Disc Bore Size

Gear Unit Type	=	SK4282 AFSH-N180TC	Reducer Bore Size (UH)	=	2.000 [in]
Ratio	=	45.05:1	Torque Rating (T <sub>SH</sub> )	=	40,000 [lb-in]
Power (P)	=	5.0 [HP]	Thrust Load (F <sub>T</sub> )	=	3,260 [lb]
Output Speed (n <sub>2</sub> )	=	39 [rpm]	Axial Force Rating (F <sub>aSH</sub> )	=	40,660 [lb]

### 2. Determine the Application Torque

$$T_2 = \frac{P \times 63025}{n_2} = \frac{(5\text{HP}) \times 63025}{(39 \text{ rpm})} = 8,080$$

### 3. Thrust Load / Axial Force

$$F_T = 3,260 \text{ [lb]}$$

### 4. Calculate the Safety Factor Against Slipping from the Applied Thrust Load

$$T_{2R} = \sqrt{(T_2)^2 + \left(F_T \times \frac{UH}{2}\right)^2} = \sqrt{(8080)^2 + \left(3260 \times \frac{2.000}{2}\right)^2}$$

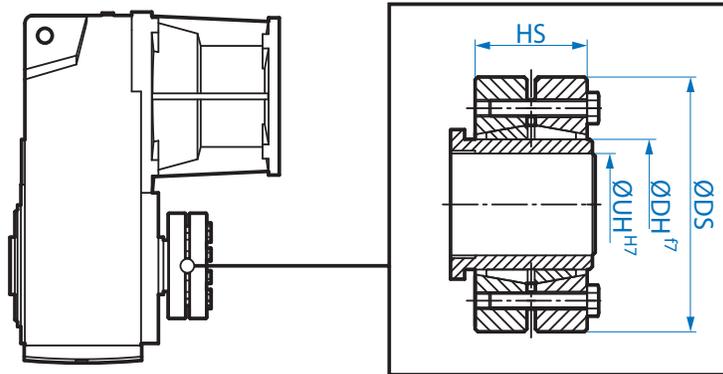

$$T_{2R} = 8713 \text{ [lb-in]}$$

### 5. Check the Safety Factor of the Shrink Disc Connection

$$f_{SD} = \frac{40000 \text{ lb}}{8713} = 4.59$$

GRIPMAXX™ Keyless Bushing System

### GRIPMAXX™ Keyless Bushing (Option M)

The GRIPMAXX™ is an innovative keyless bushing system designed and developed using the latest in Finite Element Modeling technology (FEM). GRIPMAXX™ uses the proven NORD Shrink Disc system and a unique hollow shaft design which provides both high strength and the required elasticity needed to accommodate a large number of inch and metric bushing inserts. Like the shrink disc, GRIPMAXX™ results in a high capacity interference fit.

### GRIPMAXX™ offers a number of advantages.

- Bore size flexibility – A single gear unit can be supplied with multiple bore size/bushing options.
- No special shaft tolerances – the machine builder can utilize readily available, keyless, cold finished shaft stock. The bushing absorbs the extra clearance in the system thereby eliminating the need for precise machining of the driven shaft.
- Consistent mounting location – the unique hollow bore design allows all components to utilize cylindrical active surfaces (no tapered or conical shaped bushings) allowing for a tight fit against a shouldered machine shaft. GRIPMAXX™ helps ensure a consistent mounting location and is ideal when angular timing of mounted or driven shaft components is required.
- Easy installation and removal – The loose tolerance requirements of the driven machine shaft and generous assembly clearances help ensure easy installation
- Eliminating the need for keys or keyways results in a stronger solid shaft and eliminates key crushing or pounding failures.
- High capacity/optimal fit – GRIPMAXX™ connections result in a zero-backlash interference fit ideal for positioning applications, reversing applications, and applications with frequent starts and stops. By nature of the interference fit achieved upon final assembly GRIPMAXX™ helps eliminate shaft fretting corrosion, by nature of the interference fit achieved upon final assembly.
- Corrosion Resistant - Plasma-nitrided bushings have an extremely hard, low-wear, corrosion-resistant surface. Shrink disc flanges are treated with a protective ferrous oxide finish to provide additional abrasion resistance, heat resistance and corrosion protection.

### GRIPMAXX™ Working Principal

The NORD GRIPMAXX™ Bushing System uses the NORD shrink disc locking collar, an oversized gear reducer hollow bore, and a wide range of possible split-bushing inserts intended to accommodate a variety of final bore sizes. The NORD shrink disc has a larger capacity and an increased clamping force capability than your typical commodity shrink disc clamping rings. Through tightening of shrink disc “locking screws,” large radial clamping forces are exerted upon the walls of the NORD hollow shaft. The NORD hollow shaft is uniquely designed to remain elastic, while providing considerable compressive forces. These high forces are in turn transmitted through the split bushing, producing the desired clamping forces on the driven solid machine shaft.

## GRIPMAXX™ Torque Capacity

The GRIPMAXX™ torque capacity ( $T_M$ ) is displayed in the ratings tables on Pages 5-10. The transmissible torque capacity is gear unit size and bushing size dependent as well as independent of any axial load or thrust force ( $F_{aM} = 0$ ). The GRIPMAXX™ torque capacity ( $T_M$ ) is calculated without using a safety factor and should be considered the point where a connection will slip if a higher torque is applied.

## GRIPMAXX™ Axial Force (Thrust) Capacity

Loads directed away from or towards the gearbox, along the center axis of the driven shaft are called axial loads or thrust loads. The Gripmaxx™ thrust capacity ( $F_{aM}$ ) is also displayed in the GRIPMAXX™ ratings tables on Pages 5-10. The presence of a thrust load condition decreases the torque capacity of the GRIPMAXX™ connection. The transmissible axial force or thrust capacity is gear unit size and bushing size dependent as well as independent of any applied torque condition ( $T_M = 0$ ).

## Bending Moment or Radial Load

Bending moments occur when a radial load force acts outside the GRIPMAXX™ connection. Radial or overhung load forces act in a direction perpendicular to the center rotating axis of the driven solid shaft. Radial load forces that may induce bending moment include: the weight of mounted components, a chain or belt pull, shaft deflections of the driven shaft, etc. Generally the bending moments described change from a positive to a negative value during each shaft rotation and are designated as rotating or reversing bending moments.

GRIPMAXX™ is optimally designed for shaft mounted or torque-arm mounted gear reducer applications. It is possible to use GRIPMAXX™ on flange-mounted gearboxes. With special shaft designs, it may also be possible to apply GRIPMAXX™ on foot-mounted reducer applications. NORD does not recommend the use of GRIPMAXX™ when significant bending moments or radial load forces exist. These forces must be absorbed elsewhere in the system and not by the gear unit or by the GRIPMAXX™ connection.

## GRIPMAXX™ Design Considerations

- Readily available, keyless, cold finished solid shaft stock may be used. Avoid using turned, ground and polished shaft material which can result in a failure of the friction connection.
- The customer's solid shaft end must engage the full length of the reducer hollow shaft.
- The yield-strength of the driven solid shaft must be at least 52,260 lb/in<sup>2</sup> (360 N/mm<sup>2</sup>), so that the resultant compression forces needed to create adequate friction do not cause permanent shaft deformation.
- The contact areas of the reducer hollow shaft, bushing insert and the mating solid shaft must be lubrication-free
- All shrink disc fastening screws must be of the proper grade and tightened to the specified bolt torque in a circular fashion.
- The seats between the inner ring and outer clamping discs of the shrink disc are too be lightly lubricated with molybdenum disulfide (MoS<sub>2</sub>) grease. The screw threads and head contact area need to be lightly coated with multipurpose grease.

## Solid Shaft Tolerance Requirements

The recommend solid shaft tolerances for the GRIPMAXX™ connection are tabulated below.

Inch Shaft Size		Tolerance [in]	Metric Shaft Size		ISO 268-2 Tolerance h11 (-) [mm]
Over [in]	Including [in]		Over [mm]	Including [mm]	
0.438	0.688	0.0043	10	18	0.110
0.750	1.063	0.0051	18	30	0.130
1.125	1.938	0.0063	30	50	0.160
2.000	3.125	0.0075	50	80	0.190

### GRIPMAXX™ Selection Procedure

Along with the GRIPMAXX™ ratings tables on pages 62 - 63, the following procedures are to be used to verify that a given gear reducer with GRIPMAXX™ assembly has adequate capacity and safety factor against slipping given the application load conditions.

#### 1. Select the Gear Unit and GRIPMAXX™ Bore Size

Record the gear unit type, ratio and output speed and using the GRIPMAXX™ rating tables on pages 62 - 63 complete the table below. If there is no axial load or thrust load present in the application the axial force rating can be left blank.

Gear Unit Type	=	<input type="text"/>	GRIPMAXX™ Bore Size	=	<input type="text"/> [in/mm]
Ratio	=	<input type="text"/>	Torque Rating ( $T_M$ )	=	<input type="text"/> [lb-in]
Power	=	<input type="text"/> [HP]	Thrust Load ( $F_T$ )	=	<input type="text"/> [lb]
Output Speed ( $n_2$ )	=	<input type="text"/> [rpm]	Axial Force Rating ( $F_{am}$ )	=	<input type="text"/> [lb]

#### 2. Determine the Application Torque

Application torque at the GRIPMAXX™ shrink disc connection can be calculated as follows:

$$T_2 = \frac{P \times 63025}{n_2}$$

$T_2$  = Application torque [lb-in]

$P$  = Power [HP]

$n_2$  = Reducer output shaft speed [rpm]

#### 3. Calculate the Safety Factor Against Slipping from the Applied Load Torque

Check the safety factor against slipping as follows:

$$S_1 = \frac{T_M}{T_2}$$

$S_1$  = Safety factor against slipping (torque only)

$T_M$  = GRIPMAXX™ Torque Rating [lb-in]

$T_2$  = Applied load torque [lb-in]

If there is no axial force or thrust load present in the application go directly to Step 6.

#### 4. Thrust Load / Axial Force

If there is an axial force or thrust load ( $F_T$ ) present in the system record the value below. Otherwise leave blank or indicate as zero. Check to the gearmotor rating tables to make sure the applied thrust load is less than the thrust capacity of the gear unit. Otherwise the gear unit selection is not valid.

Thrust Load ( $F_T$ ) =  [lb-in]

## 5. Calculate the Safety Factor Against Slipping from the Applied Thrust Load

Check the safety factor against slipping as follows:

$$S_2 = \frac{F_{aM}}{F_T}$$

$S_2$  = Safety factor against slipping (thrust load only)  
 $F_{aM}$  = GRIPMAXX™ Axial Force Rating [lb]  
 $F_T$  = Applied thrust load or axial load force [lb]

## 6. Determine the Resultant Safety Factor and Verify the Selection

Calculate the safety factor against slippage ( $S_R$ ) by applying the proper formula or condition.

Condition 1: Applied Torque Only	Condition 2: Applied Torque & Applied Axial / Thrust Load
$S_R = S_1$	$\sqrt{S_R} = \frac{(S_1)^2 \cdot (S_2)^2}{(S_1)^2 + (S_2)^2}$

Verify that the Gripmaxx™ connection has adequate safety factor against slippage.

Application Load Classification	Safety Factor
Uniform Load / No Shock Load	1.8 SR < 2.0
Light to Moderate Shock Load	2.0 SR < 2.5
Heavy Shock Load	3.0 ≤ SR

When torque & thrust load conditions exist (Cond. 2) NORD recommends that the  $SR > 2.0$

## Gripmaxx™ Selection Example

### 1. Select the Gear Unit and Gripmaxx™ Bore Size

Gear Unit Type	=	SK4282.1 AFM-N180TC	GRIPMAXX™ Bore Size	=	1-5/8 [in]
Ratio	=	45.05:1	Torque Rating ( $T_M$ )	=	22,331 [lb-in]
Power	=	5.0 [HP]	Thrust Load ( $F_T$ )	=	3,620 [lb]
Output Speed ( $n_2$ )	=	39 [rpm]	Axial Force Rating ( $F_{aM}$ )	=	22,322 [lb]

### 2. Determine the Application Torque

$$T_2 = \frac{P \times 63025}{n_2} = \frac{(5 \text{ HP}) \times 63025}{(39 \text{ rpm})} = 8080 \text{ [lb-in]}$$

### 3. Calculate the Safety Factor Against Slipping from the Applied Load Torque

$$S_1 = \frac{T_M}{T_2} = \frac{22,331}{8,080} = 2.76$$

### 4. Thrust Load / Axial Force

$$F_T = 3,260 \text{ [lb]}$$

### 5. Calculate the Safety Factor Against Slipping from the Applied Thrust Load

$$S_2 = \frac{F_{aM}}{F_T} = \frac{22,322}{3,260} = 6.85$$

### 6. Determine the Resultant Safety Factor and Verify the Selection

$$S_R = \sqrt{\frac{(S_1)^2 \cdot (S_2)^2}{(S_1)^2 + (S_2)^2}} = \sqrt{\frac{(2.76)^2 \cdot (6.85)^2}{(2.76)^2 + (6.85)^2}} = 2.56$$

## Parallel Helical CLINCHER™ Gearbox Options

Option Code	Description	Page
none	Clincher with B14 on motor side	75
A	Keyed hollow shaft	72
ADP	Additional drain plug	79
B	Fixing kit	75
DR	Autovent	79
EA	Hollow shaft with spline	73
F	B5 flange	71
FV	Filtered vent	79
G	Rubber buffers	74
H	Hollow shaft cover	75
H66	IP66 hollow shaft cover	75
L	Double solid shaft ④	72
LL	Long term storage	79
M	GRIPMAXX™ keyless bushing system	73
MDP	Magnetic drain plug	79
OA	Oil expansion chamber	76
OC	Oil cooler	78
OSG	Oil sight glass	79
OT	Oil reservoir tank ⑤	77
OV	Open vent	79
PR	B5 flange pilot removal	71
S	Shrink disc	72
SCP	Screw conveyor package ⑥	83
SH	Shrink disc and cover	75
SM	Stainless steel output shaft	73
SWA	Special hollow shaft	73
SWV	Special solid shaft	73
V	Solid shaft	72
VG	Heavy duty rubber buffers ⑦	75
FKM	Fluoro-elastomer oil seals	74
VL	Heavy duty output bearings	74
VL2	Spread bearing design	80
VL3	Spread bearing design with oil safe dry cavity	80
VL4	Drywell with heavy duty drop bearings	81
VS	Heavy duty shrink disc ⑧	73
X	Foot mounted	71
XF	Foot mount with B5 flange	72
XZ	Foot mount with B14 flange	72
Z	B14 flange	71
none	Paint coatings	82

④ Special shaft design

⑤ Available for SK 9282 and larger

⑥ Available for SK 1282SCP - SK 6382SCP

⑦ Available for SK 7282 and larger

⑧ Available for SK 7282, SK 8282, SK 9282, SK 11282

## Inputs

NORD's modular design allows for many different types of inputs to be added to gear reducers. All inputs are bolt on and include machined pilots to ensure simple and accurate assembly. NORD offers the following different input types:

- Integral motor
- Solid input shaft
- NEMA C-Face motor adapter
- IEC B5 motor adapter
- Servo motor adapter
- Top mount motor platform
- Scoop mount motor platform
- Custom mounting interface

For more information, see the input section pages 85 - 97.

## Mounting Options

NORD offers a number of different mounting arrangements with the CLINCHER™ gear units.

- Shaft mount (A)
- B14 flange (Z)
- B5 flange (F)
- Foot (X)

### Foot Mounted (X)

Foot or base mounting is the most common method of reducer mounting. The speed reducer is secured in place with bolts or studs to a mounting base. Most often the reducer has mounting feet with through holes.

### B5 Flange (F)

A B5 flange provides a simple, large diameter mounting flange with clearance holes and a centering pilot to firmly secure the speed reducer to the application. The B5 flange utilizes standard metric dimensions and is available for all NORD reducers. Many reducers offer a number of B5 flange diameters.

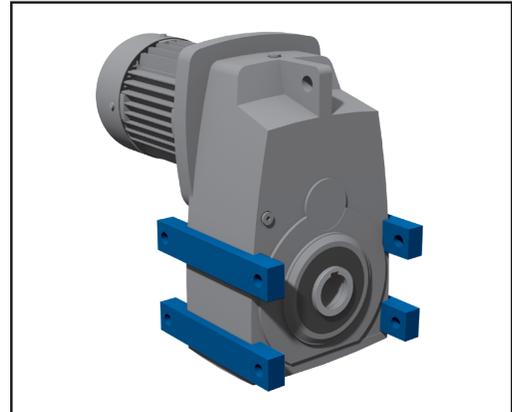

### B5 Flange Pilot Removal (PR)

B5 flanges have a centering pilot machined onto the flange. In cases where there is not a matching counter bore or when the flange must sit flush to the mounting surface then the centering pilot must be removed. This pilotless flange is used to firmly secure the speed reducer to the application.

In some cases the matching surface already has a centering pilot and the use of a female pilot (counter bored flange surface) is recommended. Counter rotating drives are an example where a female pilot is frequently used.

### B14 Flange (Z)

The NORD B14 flange consists of threaded holes and a centering pilot machined into the reducer housing. It is commonly used to secure the reducer to the application or machine base as well as to mount many bolt on components like a B5 flange, torque arm, or shaft cover. The B14 flange uses standard metric dimensions and allows a compact method of securing the reducer. This option is standard on all CLINCHER™ units

CLINCHER™ Foot Mounted Unit (X)

CLINCHER™ B5 Flange Unit (F)

CLINCHER™ B14 Flange Unit (Z)

CLINCHER™ Solid Shaft (V)

### Foot Mounted with B5 Flange (XF)

NORD can supply some foot mounted reducers with a B5 flange as well. These type XF reducers are designed to be foot and not flange mounted. The B5 flange is normally used to mount auxiliary equipment to the speed reducer. If the B5 flange is going to be used to mount the reducer, additional support will normally be required.

### Foot mounted with B14 Face Flange (XZ)

NORD can supply some foot mounted reducers with a B14 face flange as well. These type XZ reducers are designed to be foot and not flange mounted. The B14 face flange is normally used to mount auxiliary equipment to the speed reducer. If the B14 face flange is going to be used to mount the reducer, additional support will normally be required.

CLINCHER™ Hollow Shaft (A)

### Shaft Options

NORD offers a number of different types of shafts, shaft options and shaft materials including:

#### Solid Shaft (V)

NORD's standard keyed solid shafts include a centered threaded hole. Shafts are available as inch or metric versions. The standard shaft material is 1045 or 4140 or equivalent.

#### Double Solid Shaft (L)

The standard solid shaft end is projected out both sides of the speed reducer. This option is commonly used to transfer torque out of both sides of the reducer or to mount a speed-monitoring device such as an encoder on one of the shaft ends. If you need the keyways to be aligned you must specify with NORD upon ordering. This option is an engineered per order with the CLINCHER™ product line.

#### Keyed Hollow Shaft (A)

NORD's standard keyed hollow shafts are made from SAE 1045 high carbon steel. They feature standard keyway dimensions and are available both inch and metric designs. Many NORD reducers offer a variety of hollow shaft diameters.

#### Shrink Disc (S)

The shrink disc relies on the proven wedge principle to create a keyless, mechanical interference fit by converting locking screw tension into radial contact pressure on shaft and hub in effect "shrinking" it on to the customer shaft. Shrink discs result in a zero backlash mechanical interference fit that can accommodate high torque unlike other mounting technologies and will never wear or pound out, even for high cycle fluctuating and reversing loads.

#### Other shrink disc advantages include:

- Elimination of fretting corrosion associated with key connections.
- Generous clearance for easy mounting & dismounting.
- Allow for larger bores sizes compared to keyed hollow shafts.

For more information see page 52

CLINCHER™ Shrink Disc (S) (SH)

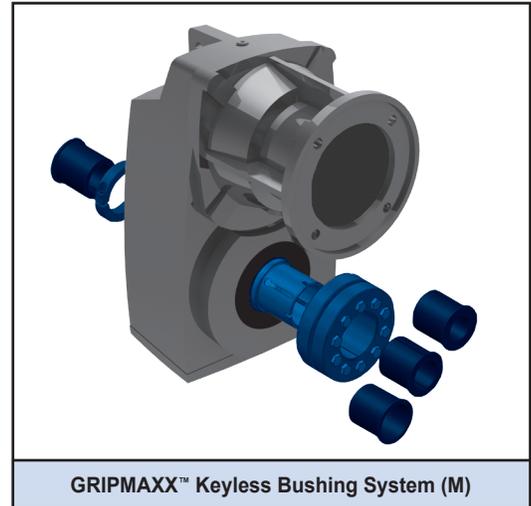

## Heavy Duty Shrink Disc (VS)

NORD heavy duty shrink discs offer increased clamping force and safety factor for severe applications.

## GRIPMAXX™ Keyless Bushing System (M)

The Gripmaxx™ bushing system offers keyless interchangeable bushings for mounting NORD hollow shaft reducers onto a large range of driven machine shaft sizes. Gripmaxx™ was developed by using Finite Element Modeling (FEM) technology in order to best optimize material selection, mechanical design, and performance. Gripmaxx™ provides a high-capacity, zero-backlash, interference fit to the driven machine shaft that minimizes the possibility of fretting corrosion. This option eliminates the typical assembly and disassembly challenges of using interference fits by providing generous clearances to help ensure easy installation and removal of the gearbox. Torque is transmitted via the tried and tested NORD Shrink Disc, which in turn produces high compressive forces and friction between the reducer hollow shaft, split-bushing and solid machine shaft.

## Special Shafts & Shaft Materials

### Stainless Steel Output Shaft (SM)

Output shafts made from stainless steel are available and are frequently used in food, pharmaceutical, and washdown applications. In some cases solid input shafts can also be provided in stainless.

### Special Solid Shaft (SWV)

Special solid shaft diameters and lengths can be provided for a nominal price adder. Special features are also available including keyless shafts, cross drilled shafts or special threaded taps. Different shaft materials are also available. NORD has in-house drafting design and machining departments so we can provide special requirements in short lead times. Specify your shaft requirements and NORD will verify the design feasibility.

### Special Hollow Shaft (SWA)

Special hollow bore shafts can also be provided. Special hollow bore shafts can be provided with special diameters, multiple keyways, and even special extended hollow shafts that are frequently used with counter rotating drives. Different shaft materials are also available. Specify your shaft requirements and NORD will verify the design feasibility.

### Hollow Shaft with Spline (EA)

Hollow shafts with a metric involute spline profile according to DIN 5480 are available for some NORD hollow shaft reducers. These spline shafts are commonly used on crane travel drives. See page 283 for dimensions.

**Nitrile Rubber & Fluoro Elastomer Seals (NBR) (FKM)**

### Heavy Duty Output Bearings (VL)

Replacing standard output bearings with heavy-duty versions will increase the external load carrying capacity of the speed reducer. Increased capacity in either or both overhung (radial) or thrust (axial) loading insures that premature bearing failure will not occur due to high stresses in the bearing elements. The increased bearing capacity will also keep the speed reducer as small as possible by not having to select the next larger case size in order to handle the bearing loads. If increased bearing life is desired, larger bearings will reduce the relative stress on the bearings and increased B10 bearing life.

**CLINCHER with Rubber Buffers (G)**

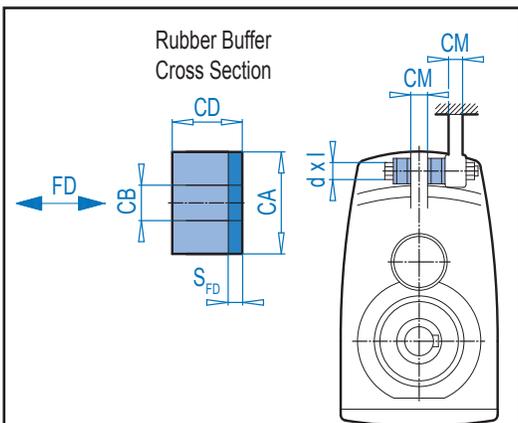

### Nitrile Rubber Oil Seals (NBR)

Nitrile rubber (NBR) or Buna-N shaft seals are standard issue with NORD gear units. NBR seals offer high tensile strength and good resistance to abrasion, tear, and compression set. They are designed to withstand most oils, lubricants, fuels, and animal oils and they provide resistance to many diluted acids and bases. They perform well in cold environments and in temperatures up to 125°F (250°C). NBR seals should not be used when exposed to concentrated acids, oxidizing agents, ozone, or chlorinated hydrocarbons.

### Fluoro-elastomer Oil Seals (FKM)

As a standard option, NORD offers Fluoro-elastomer (FKM) shaft seals. FKM seals also offer good resistance to abrasion, tear, and compression set. FKM seals provide very good resistance to oils, fuels and mineral acids. Compared to NBR seals, FKM seals offer superior resistance to oxidation and aging, ozone, UV exposure, weather, fungus, and mold. FKM seals are also preferred when high temperature resistance is needed as they are designed to handle temperatures up to 390°F (200°C). FKM seals should be applied with extreme caution in cold temperature environments as they may become brittle. FKM seals may also accelerate wear on softer shaft steels including 300 series austenitic stainless steel alloys.

If your gearmotor or gear reducer application requires special sealing solutions please consult NORD.

**Rubber Buffers Variable Information (G)**

### Rubber Buffers (G)

Two rubber buffers are installed on the integral torque tab in order to dampen torsional shock loads delivered to the reducer. The use of rubber buffers can increase the reducer's service life by reducing cumulative torsional shock loads. For further dampening, several rubber buffers may be used in a row. The permissible temperature range for the use of our rubber buffers is -40° C - 80° C. Please see page 277 for dimensions.

- $F_D$  = Force working on the rubber buffer [lb]
- $d \times l$  = Diameter x length
- $cm$  = Width
- $n$  = number of rubber buffers used in series
- $S_{FD}$  = Distance buffers compress at force ( $F_D$ )
- $S_{FDtot}$  = Total compression distance ( $S_{FDtot} = n \times S_{FD}$ )

**CAUTION**

During installation, the rubber buffer may only be tightened until the play between the contact surfaces is eliminated. Pre-tensioning of the rubber buffer is not permissible

## Heavy Duty Rubber Buffers (VG)

Heavy duty rubber buffers are also available on CLINCHER™ reducer sizes SK7282 to SK11382.1. These heavy duty buffers provide the same benefits as the standard “G” buffers listed above but are usable in more severe shock applications. For dimensions see page 277.

### CAUTION

During installation, the rubber buffer may only be tightened until the play between the contact surfaces is eliminated. Pre-tensioning of the rubber buffer is not permissible.

## Hollow Shaft Cover (H)

An optional cover can be supplied in order to guard the rotating hollow output shaft. It also protects the output shaft seals against dust and dirt particles and in some cases can be sealed against moisture and dust.

## Shrink Disc Cover (SH)

The shrink disc cover is required with all shrink disc units and provides protection from the rotating shrink disc.

## IP66 Hollow Shaft Cover (H66)

NORD provides hollow shaft covers with IP66 enclosure protection (protection against dust and water jets) to completely seal the rotating hollow shaft from moisture and debris.

## Fixing Kit (B)

Due to the slight oscillations inherent in any rotating shaft, NORD offers an optional “fixing kit”. This is a method to prevent the reducer from “walking out” of position. The kit includes all necessary parts to secure the shaft in the axial direction by using a tapped hole in the end of the mating male shaft.

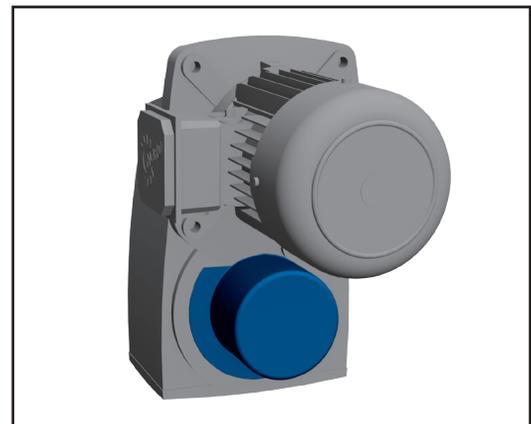

There are two methods for securing the fixing kit. The first involves pulling the customer supplied male shaft to the snap ring (type 1) and the second method the customer supplied shaft is shouldered (type 2) and pulled against the hollow shaft and not the snap ring.

## Clincher with B14 on motor side

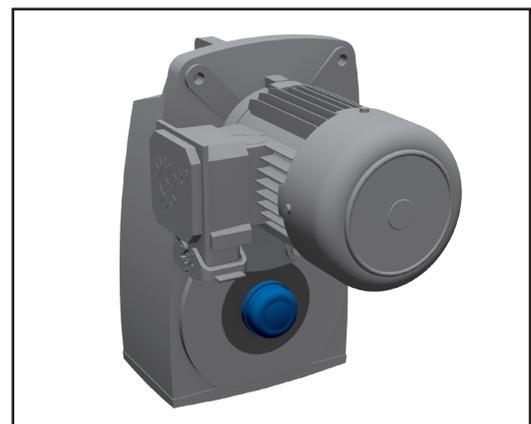

CLINCHER™ reducers may optionally be supplied with an additional B14 flange on the motor side.

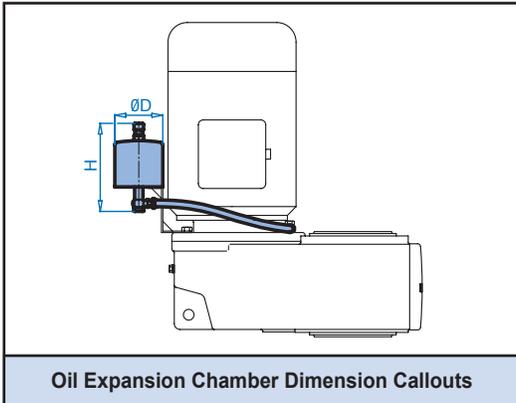

CLINCHER with Hollow Shaft Cover (H)

CLINCHER with Shrink Disc Cover (H)

CLINCHER with Fixing Kit (B)

Oil Expansion Chamber Dimension Callouts

## Oil Expansion Chamber (OA)

Gear units with the motor or input shaft mounted vertically upright must be filled almost completely with oil in order to properly supply the 1st stage gearing with oil. Certain operating conditions and higher gear peripheral speeds can result in increased oil churning or splashing losses and heating of the air space located above the oil.

During operation, the oil expansion chamber provides a safe overflow area for the expanded oil-air mixture, thus eliminating excessive pressure build-up, minimizing the formation of foam, and preventing oil-loss through the breather, oil seals, gaskets, etc. As heat is released from the expanded air-oil mixture contained within the overflow chamber, gravity allows the oil to be returned to the primary gear sump supply, eliminating a critical loss in oil level. At rest, the gear unit is filled to its normal fill-level position and there should be no oil in the expansion chamber.

Clincher™ Gear Unit	Size	Part Number	D	H	[lb]
SK 4282/SK 4382 SK 5282/SK 5382 SK 6382	I	28390390	3.94	7.09	11.0
SK 6282 SK 7282/SK 7382	II	28390400	5.91	11.81	13.2
SK 8282/SK8382	III	28390410	7.09	11.81	15.4

## Application Considerations

Nord strongly recommends the use of an oil expansion chamber when the motor is mounted vertical-up, when the reducer mounting position is M4 and when it meets any of the criteria listed below. Any application required to operate above 1800 rpm synchronous motor speeds should also be reviewed to be certain that the reducer thermal limits are observed.

- CLINCHER™ gear unit sizes from SK4282 - SK8282, with ratios  $i_{total} \leq 24:1$  or output speeds  $n_2 \geq 75$  rpm.
- CLINCHER™ gear unit sizes SK9282/SK9382 and larger require an oil reservoir (option OT) instead of an oil expansion chamber (OA).

## Oil Reservoir Tank (OT)

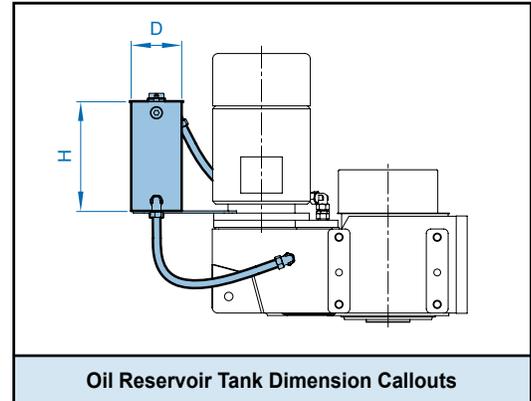

The oil reservoir tank allows the reducer housing to be completely filled with oil. The tank always contains oil and is above the reducer oil sump, which allows the reducer to be completely filled with oil.

CLINCHER™ shaft mount units SK9282 and larger, with the motor or input shaft mounted vertically upright, should be filled with oil in order to prevent excessive foaming and heat build-up.

The oil reservoir must be located above the gear unit. Even at non-operating ambient conditions, a small amount of oil should be visible in the bottom of the oil reservoir. During operation, all parts are submerged in oil, especially the high-speed gear set, thus preventing the formation of oil foam. In addition, this type of installation assures that all bearings are properly lubricated with oil.

The oil reservoir is larger than the oil expansion chamber and is vented. The oil reservoir has two flexible oil hoses connected to the gear unit to help assure proper ventilation and passive oil circulation.

As a standard, the gear unit is supplied filled to the level indicated on page 29. Upon commissioning, the oil tank must be filled to the level shown on the dipstick located inside the tank (approximations shown in below table). The user is responsible to add this additional oil, however, NORD can supply at an additional charge.

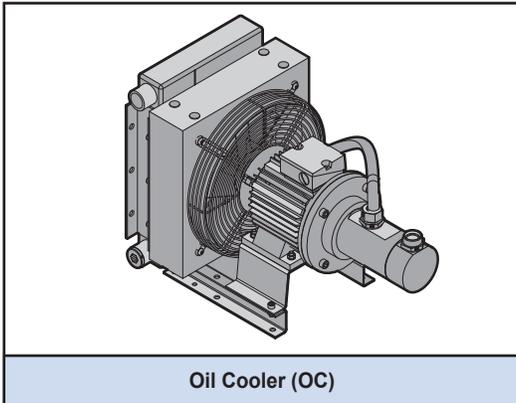

Parallel Shaft Gear Unit	Size	D	H	Additional Oil Fill (L)	Container Volume (L)
SK 9282/SK9382 SK 10382.1	I	7.87	15.75	approx. 30	10
SK 11382.1	II	12.99	15.75	approx. 40	30

## Application Considerations

NORD strongly recommends the use of an oil reservoir tank on parallel shaft gear unit sizes SK9282/SK9382 and larger when the motor is mounted vertical-up or when the reducer mounting position is M4.

Options

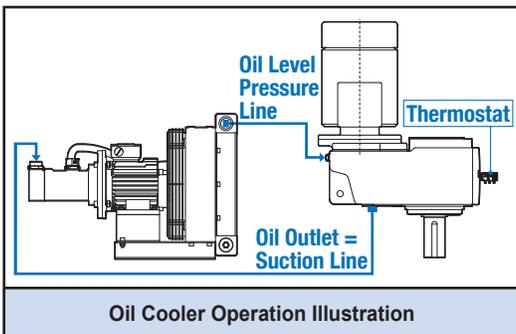

Oil Cooler (OC)

## Oil Cooler (OC)

In certain applications, in order to prevent reducer overheating, NORD may recommend an oil cooler. In the event the customer wishes to supply their own device, NORD can estimate the amount of heat dissipation required, for a given set of application parameters.

NORD can also provide a compact air-over-oil cooling unit. The oil cooler (Option OC) comes complete with heat exchanger, motor, pump, circulating fan, and connection hoses. Oil is pumped from the reducer and cooled by the air stream created by the large fan. The temperature is controlled by a thermostat. Please consult NORD for additional details about the oil cooler.

Oil Cooler Operation Illustration

### CAUTION

Not suited for hazardous areas or potentially explosive atmospheres.

#### Performance Specifications

Oil Cooler Type	TFS/A 8,5-400-F-03-11
Supplier	UNIVERSAL HYDRAULIK®
Input / Output Connection	G3/4" / G1/2"
Cooling Capacity	8.5 kW
Pump Capacity	30 l/min
Rate of Air Flow	1131 m³/h
Viscosity Range	10-300 mm³ /s
Permissible Pressure	10 bar
Motor Power	0.55 kW
Frequency	50 Hz / 60Hz
Supply Voltage	230-400 V/50 HZ – 460 V/60 Hz
Rated Current	1.7 A
Phase	3 ~
RPM	1350 / 1650
Construction Class	IP55
Insulation Class	F
Temperature Class	B

## AUTOVENT™ (DR)

The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material and prevent lubrication contamination from dust particles, moisture and air-borne process chemicals. The breather opens at approximately 0.3-0.9 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, while reducing foaming and oxidation.

## Open Vent (OV)

An open vent can be optionally supplied on NORD reducers. The open vent allows for air pressure differences between the inner space of the reducer and the atmosphere. This open vent will be closed upon delivery to prevent oil leakage. Before the reducer is put in service the open vent should be activated by removing the sealing plug.

## Filtered Vent (FV)

NORD offers a filtered vent, which allows gases to permeate, but does not allow dust and debris to pass through the vent.

## Oil Sight Glass (OSG)

The oil sight glass provides a visible oil level indication on the reducer. The sight glass replaces the standard steel fill plug and consists of a sealed clear porthole centered in the middle of a brass plug. The sight glass allows for quick oil level and color inspection.

## Magnetic Drain Plug (MDP)

Magnetic drain plugs attract and hold ferrous metal particles that may circulate inside the reducer's lubrication system. These potentially abrasive particles may cause excessive wear in the reducer if they remain circulating. An increase of collected material may be a warning sign of future problems.

## Special Drain Plugs

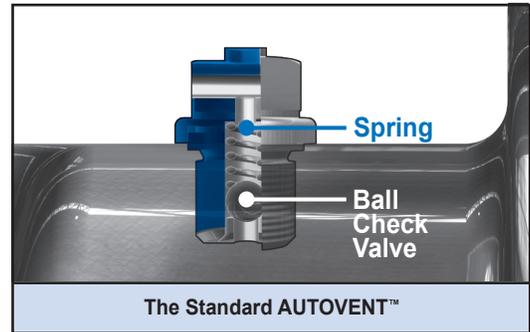

NORD can offer specialized oil drain plugs and solutions. Some of these solutions include spring loaded right-angle valves, straight valves, with or without covers as well as other fitting types.

## Additional Drain Plug Hole (ADP)

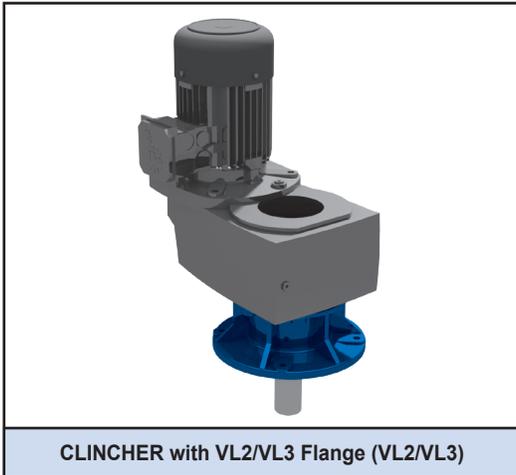

NORD can add an additional drain hole to the reducer housing for a small surcharge if required for special oil plumbing needs.

## Long Term Storage (LL)

Speed reducers are frequently put in storage prior to installation for long periods of time and in some cases exposed to the elements. NORD's long term storage option protects the unit from moisture or corrosion by coating all unpainted surfaces with a dry, transparent, durable waxy film. Once installation is necessary this waxy film can be easily removed with a commercial de-greaser or petroleum solvent. If possible the store room should be vented and dry, with room temperatures between 23°F and 104 °F (-5 °C and 40 °C).

Options

CLINCHER with VL2/VL3 Flange (VL2/VL3)

## VL2 – Spread Bearing Design

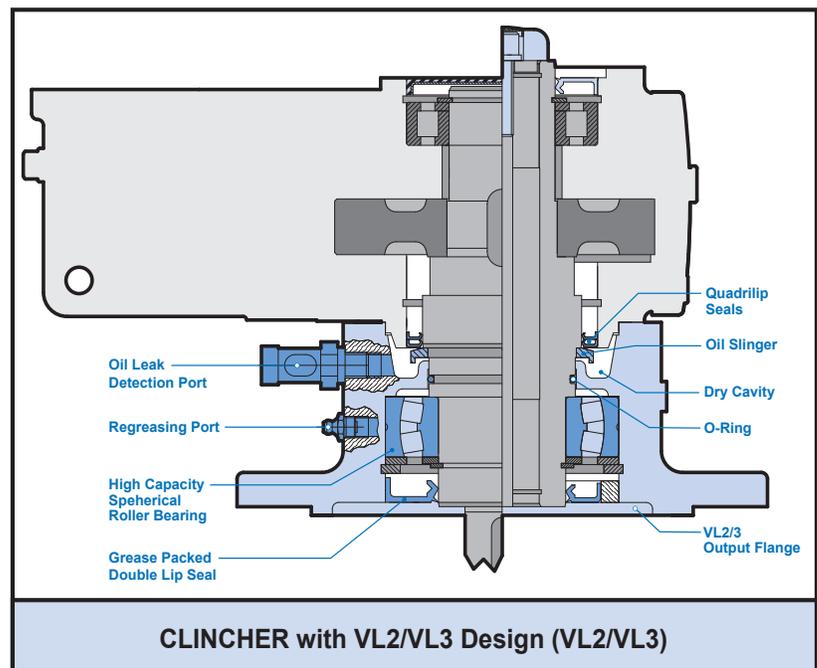

NORD offers reinforced output shaft bearings with increased bearing distance. The lower bearing is a oversized, double row spherical bearing, which absorbs high overhung and thrust loads while providing a longer bearing service life. The spherical roller bearing is especially useful in compensating for alignment errors in long agitator shafts. The VL2 spread bearing design is commonly used for shredders, mixers, overhead conveyors or applications requiring increased bearing load carrying capacities. Included with the VL2 design is a grease fitting for the lower bearing and a removable plug to allow excess grease to purge from the bearing cavity.

## VL3 – Spread Bearing Design with Oil Safe Dry Cavity

The VL3 dry cavity design adds additional oil leak protective measures to the VL2 spread bearing design. NORD's Quadralip™ sealing system prevents oil from leaking from the gearbox into the VL2 flange. If in any case oil does leak past the Quadralip™ seals, it would flow down to the oil slinger mounted onto the shaft. As the shaft rotates, the oil will sling off into the dry cavity. A sight tube is provided for dry cavity inspection. At the bottom of the spread bearing flange is greased packed, double lip seal.

NORD can calculate the service life upon request. The following values are required for calculation:

- |   |       |       |
|---|-------|-------|
| ■ Rated Power                                   | P     | [hp]  |
| ■ Output Speed                                  | $n_2$ | [rpm] |
| ■ Overhung Force                                | $F_r$ | [lb]  |
| ■ Axial Force (thrust)                          | $F_a$ | [lb]  |
| ■ Overhung force to the flange support distance | C     | [in]  |
| ■ Required Service Life                         | $L_h$ | [h]   |

CLINCHER with VL2/VL3 Design (VL2/VL3)

## VL4 – Drywell with Heavy Duty Drop Bearings

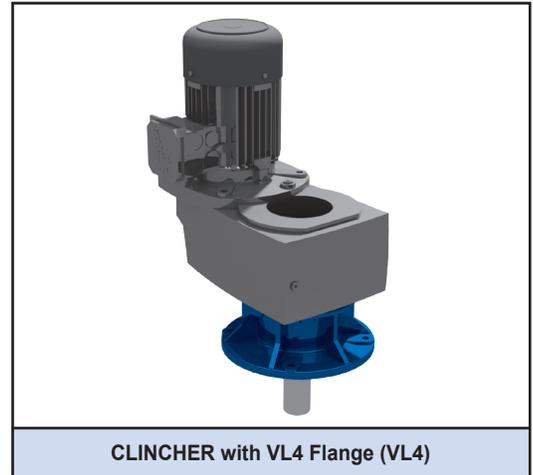

NORD offers a high capacity drop bearing drywell units in our Clincher™ offset parallel and right-angle helical-bevel. These True Drywell designs provide the high capacity bearings design of the VL2/VL3 units together with a drywell design.

### Drywell Design

A drywell design isolates the low-speed output shaft from the gear unit's oil sump to prevent oil sump lubricant from leaking through the output area. A drywell design physically separates the oil sump lubrication from the rotating output shaft.

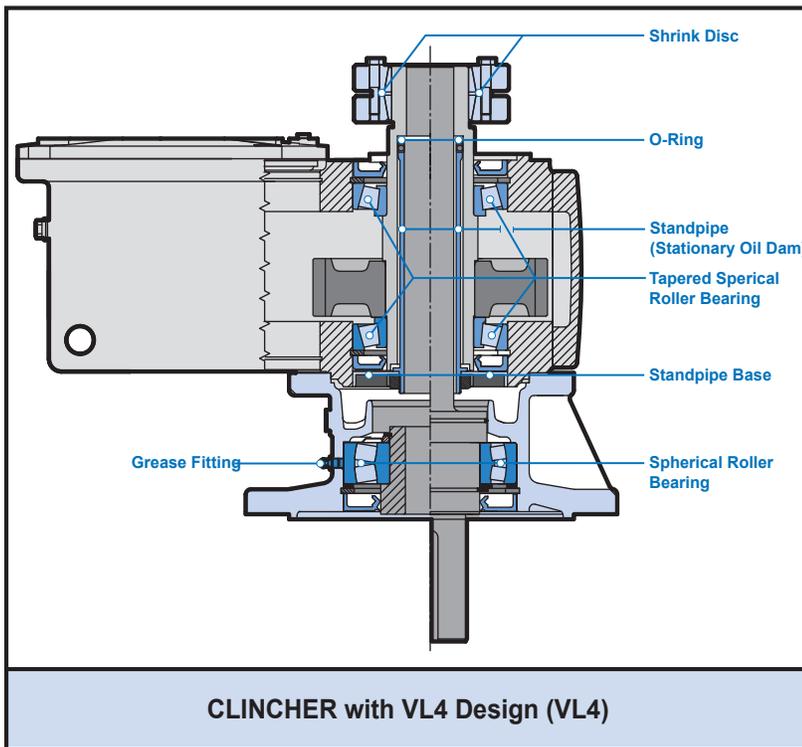

### NORD's Superior Drywell

NORD's stationary oil dam tube extends vertically above the top of the gear unit housing. Most other drywell designs simply have a small oil dam tube inside the gear unit's slightly above the oil sump level. NORD's drywell design provides a much higher degree of leak safety. Additionally NORD provides a sealing o-ring at the top of the oil dam for maximum protection.

Nord Products on the Paint Line

## Paint Coatings and Surface Protection

NORD's standard paint coating is a two component, aliphatic polyurethane finish containing 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications.

Advantages of NORD's stainless steel two component polyurethane:

- Excellent adhesion to cast iron, aluminum, steel, and plastics
- Excellent corrosion resistance
- Excellent chemical resistance
- Excellent gloss and color retention
- Suitable for indoor and outdoor exposure
- Nonporous and excellent abrasion resistance
- Suitable for use in a USDA inspected facility

Finish	Standard Colors	Coating	Use
<b>Standard (stainless steel paint)</b>	Stainless steel silver (Gray)	1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment
<b>Alternate color</b>	Black, Blue, Red, Orange	1 x Color top coat (polyurethane)	Indoor or outdoor protected

## Paint free design Gear Units (SK0182.1NB-SK0282.1NB & SK1382.1NB)

Our NB gear unit sizes are made from corrosion resistant aluminum alloy and feature a smooth body design. The smooth aluminum alloy surfaces have natural corrosion protection; therefore paint coatings are not required. Paint coatings may optionally be applied.

## Cast Iron Gear Units (SK1282 - SK11382.1)

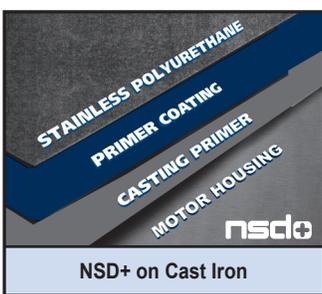

The SK1282-SK11382.1 gear units are made from class 35 gray cast iron and are painted with NORD's stainless steel paint.

Additionally a variety of coating options are available including our severe duty coatings.

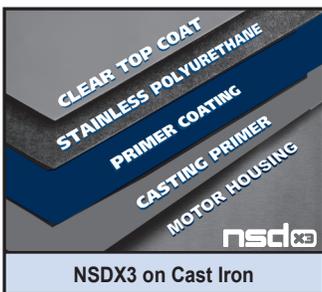

Improved corrosion protection for wet and outdoor environments starts by applying a primer undercoat over the primed cast-iron or base aluminum materials. The finish is then completed with our exceptional strength stainless steel polyurethane top coat.

<b>NORD Severe Duty + (NSD+)</b>	Stainless steel silver (Gray)	1 x Primer high solid alkyd system 1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment
<b>NORD Severe Duty +W (NSD+W)</b>	White	1 x Primer high solid alkyd system 1 x White top coat (polyurethane)	Indoor or outdoor moderate environment
<b>Alternate color (NSD+)</b>	Black, Blue, Red, Orange	1 x Primer high solid alkyd system 1 x Color top coat (polyurethane)	Indoor or outdoor moderate environment

For more demanding environments our multi-layer corrosion protection starts with a primer undercoat over the base material and then adding our stainless steel polyurethane coating and a high-gloss topcoat.

<b>NORD Severe Duty Extreme (NSD-X3)</b>	Stainless steel silver (Gray)	1 x Primer high solid alkyd system 1 x Stainless steel (316) (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment
<b>NORD Severe Duty Extreme (NSD-X3W)</b>	White	1 x Primer high solid alkyd system 1 x White (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment
<b>Alternate color (NSD-X3)</b>	Black, Blue, Red, Orange	1 x Primer high solid alkyd system 1 x Color (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment

## Screw Conveyor Package (SCP)

The NORD screw conveyor package (SCP) provides a complete power transmission for screw conveyors. It is extremely efficient due to the elimination of costly v-belt drives and by providing integral gearmotors or direct coupled motors to a NEMA C-face reducer. Efficiency can be increased even further by applying the NORD “H” line of energy efficient motors. The SCP package also features a superior sealing system and mounting features.

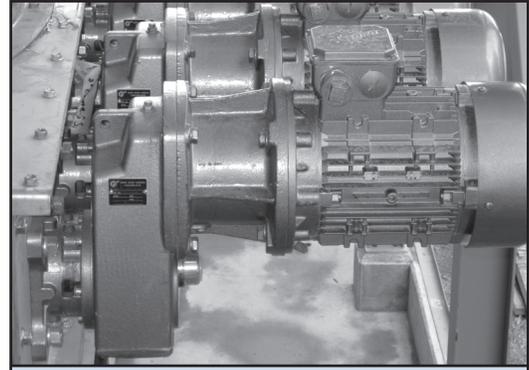

For more information please refer to catalog G1129.

### Optimized Sealing System

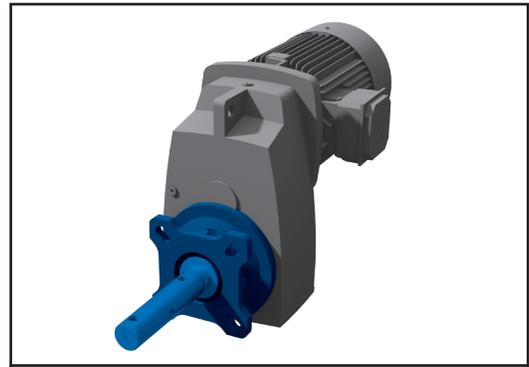

- Dual (FKM) lip seals
- Grease impregnated packing seal
- Dual gap seals (excludes particles) – 0.03” gap
- Material evacuation ports
- Shaft material ditch
- Quadrilip™ sealing

### Mounting

- Standard CEMA mounting
- Versatile flange – multiple bolt patterns
- 3-Hole tapered CEMA drive shaft
  - Easy mounting & Removal
- Reduced bearing loads
  - Tapered shaft allows for screw pipe misalignment
- Quick external removal feature

SCP product in use

**SK3282 - W**

— Solid Input Shaft  
— Gear unit

Gear unit with solid input shaft.

**SK3282 -140TC**

— NEMA 140TC Motor Adaptor  
— Gear unit

Gear unit to receive standard NEMA C-Face motor adaptor.

**SK3282 - IEC80**

— IEC 80 B5 Motor Adaptor  
— Gear unit

Gear unit to receive standard metric IEC B5 flange mount motor adaptor.

### Input

NORD's modular design allows for many different types of inputs to be added to gear reducers. All inputs are bolt on and include machined pilots to ensure simple and accurate assembly. NORD offers the following different input types:

- Integral motor
- Solid input shaft
- NEMA C-face motor adapter
- IEC B5 motor adapter
- Servo motor adapter
- Motor platform
- Scoop mount motor platform
- Custom mounting interface

### Nomenclature

After the letters, 'SK' Reducer sizes are indicated followed by the dash (-), then the input device such as:

- SK3282 – 90L/4 (Integral motor)
- SK3282 – W (Solid input shaft)
- SK3282 – 140TC (NEMA C-face motor adaptor)
- SK3282 – IEC80 (IEC B5 motor adaptor)
- SK3282 – SEP130 (Servo motor adaptor)
- SK3282 – MK140T (Motor platform)
- SK3282 – S140T (Scoop mount motor platform)
- SK3282 – WII (Custom mounting interface)

## Integral Motors

NORD provides integral motors that mount directly to the gearbox. Integral motor mounting eliminates the need for costly v-belts or sheaves and directly couples the motor to the reducer. This also results in a dimensionally compact one-piece package.

NORD high performance integral motors are available in many operational voltages, are inverter duty rated, and offer many valuable options including energy efficient motors and power off brakes. For more information on integral motors, see the motor section.

## Solid Input Shaft

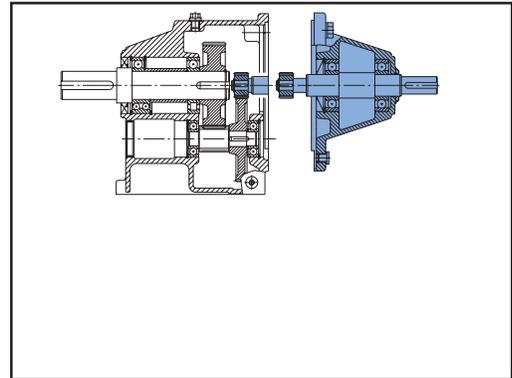

Designed to mount couplings, sheaves or sprockets, which transfer torque from the prime mover. The input shaft is made from ANSI 1045 or stronger material dimensioned with long keys according to ANSI B17 standards. Bearings are sized to handle overhung loads resulting from belt or sprocket inputs. Input shaft load ratings may be found on the table located on page 34. The maximum gearbox input power rating is indicated in the speed reducer performance tables on pages 153 - 172.

The bearings of solid input shaft type W of the larger gear units require re-lubrication at a regular interval. This is necessary for double-stage gearboxes sizes SK6282 and larger, and triple-stage gearboxes from size SK7382 and larger. For additional information please reference the appropriate user manuals located at [nord.com/docs](http://nord.com/docs) by entering your products serial number.

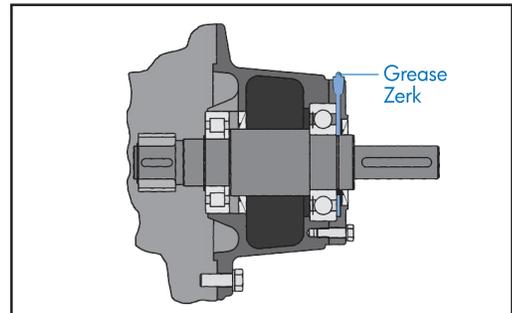

## Automatic Lubricator

Our double-reduction gearboxes size SK6282 and larger and triple reduction gearboxes SK6382 and larger that are equipped with either a NEMA C-face or IEC adapter larger than 250TC/IEC160 are provided with an automatic lubricator.

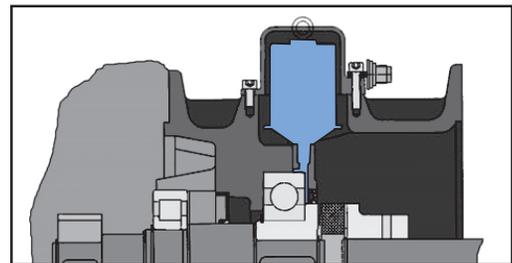

The automatic lubricator must be activated before the gearbox is put into operation. Activation is accomplished by turning the plastic eyelet into the canister until the eyelet breaks off. For additional information please reference the appropriate user manuals located at [nord.com](http://nord.com).

**NEMA C-FACE / IEC Motor Adapter**

## NEMA C-Face Motor Adapter

NEMA C-face motor adapters allow for easy installation and removal of industry standard C-face motors. NEMA C-face motor adapters consist of a coupling and an adapter housing that connect the motor to the gear reducer. Gear units with NEMA C-face adapters are commonly used in applications that require specialized motors, for serviceability or quick replacement. NORD additionally offers NEMA C-face motors and brakemotors that may be installed to the motor adapter.

The maximum input power of a gear unit with a NEMA C-face adapter is generally limited by the power rating of the standard NEMA C-face motor size. The power limits are indicated in the reducer ratings tables. In some cases the gearbox limit ( $T_{2max}$ ) will be the limiting capacity. Both the NEMA adapter limit and the gearbox torque limit must be considered. If the speeds required exceed those included in the ratings tables please contact NORD. For additional information please reference the appropriate user manuals located at [nord.com](http://nord.com).

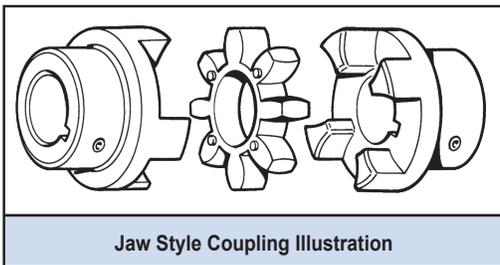

**J & M Style Coupling Illustrations**

## IEC Motor Adapter

IEC motor adapters allow for easy installation and removal of industry standard IEC motors according to DIN 42677. The IEC adapter is very similar to the NEMA C-face adapter in construction. The maximum input power is generally limited by the IEC motor size. For ratings and dimensions, please consult our metric catalogs.

## Motor Adapter Couplings

Couplings are made with tough abrasion resistant materials, which resist most chemicals and petroleum products. They are electrically isolated (prevent metal to metal contact) and require no lubrication or maintenance. Depending on the size of the C-face input, NORD will provide either a gear or jaw type coupling.

**Jaw Style Coupling Illustration**

## Gear Couplings

Gear couplings are used with 56C to 280TC adapters and provide a space saving design. C-face adapter input shafts have a machined male spline that connects with a molded nylon spline on the coupling. This specially designed nylon sleeve exhibits high torsional stiffness, resulting in minimum backlash and reduced internal frictional losses. The coupling design yields low inertia and uses blind assembly and slip together components for easy inspection without disassembly.

NORD incorporates two styles of gear couplings, the "J" and "M" styles. The "J" style is a one-piece coupling consisting of a nylon sleeve and metal hub that are fused together. The "M" style is a two-piece coupling consisting of a separate nylon sleeve and metal hub.

## Jaw Couplings

Jaw couplings are used with 320TC and larger adapters. The cast iron jaw type couplings have a urethane "spider" that provides smooth transmission of the motor torque and has excellent shock and vibration dampening characteristics. A set screw on the coupling prohibits axial movement along the motor shaft. Jaw couplings with low-backlash hubs and spider elements are provided with NORD servo adapters

### NEMA Motor Adapter Details

NEMA C-face Motor Frame	NEMA Adapter Nomenclature	4 pole Motor HP	Max Motor Weight [lb]	Coupling Description	Coupling Bore [inches]	Continuous Torque [in-lb]	Maximum Torque [in-lb]

# Square Flange Servo Motor Adapters

## Servo Motor Adapters

Servo motor adapters are designed to handle the highly dynamic capabilities of servo motors. NORD servo motor adapters have a square mounting flange and are available with either a keyed (SEP) or a keyless (SEK) coupling. They are suitable for speeds up to 3000 rpm and the high torques produced by servo motors. Higher input speeds can be handled for a short duration and the bearings and input shaft are designed to cope with the high torque loads.

Compatibility and dimensions are listed in the table below.

Reducer type	Servo Adapter	Reducer Input Flange Size	Units	Motor Flange						Motor Shaft		Coupling Distance X	Rotex® Coupling info			
				CC	AJ1	AK1	BD1	BDD	BF1	U1	L1		Size	Cont. Torque	Peak Torque	Units

	-SEK 300		mm	250	300	250	260	350		48	82					

SEP adapter couplings are intended for keyed motor shafts and SEK adapters use clamping style couplings for motor shafts without keys.

Check with factory to confirm ratio availability of a particular gear unit type and servo adapter combination.

Consult NORD if trying to adapt a servo motor with dimensions other than shown.

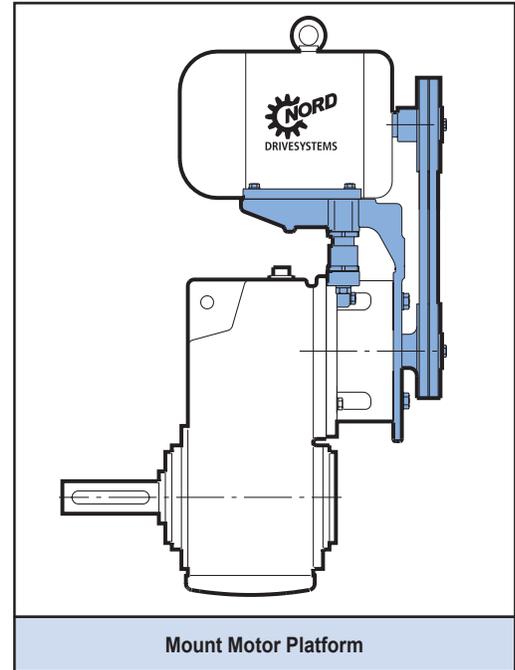

## Motor Platform (MK)

Some applications require the motor to be mounted to the reducer while allowing a belt drive connection from the motor to the reducer. MK platforms offer the following advantages:

- The motor may be mounted over the top of the reducer
- Light, vibration inhibiting aluminum construction
- Corrosion resistant, easily adjustable mechanism for belt tensioning
- Corrosion resistant fasteners
- Available in all mounting positions
- The motor may be positioned 90° to the right or left
- Platform has multiple bolt patterns for various motor sizes

Motor platforms are pre drilled and tapped to bolt on a standard NEMA footed motor. Each platform has belt tension adjusters. See dimension DH on the following pages for the adjustability range. Motor, belts, sheaves and guard are supplied by the customer.

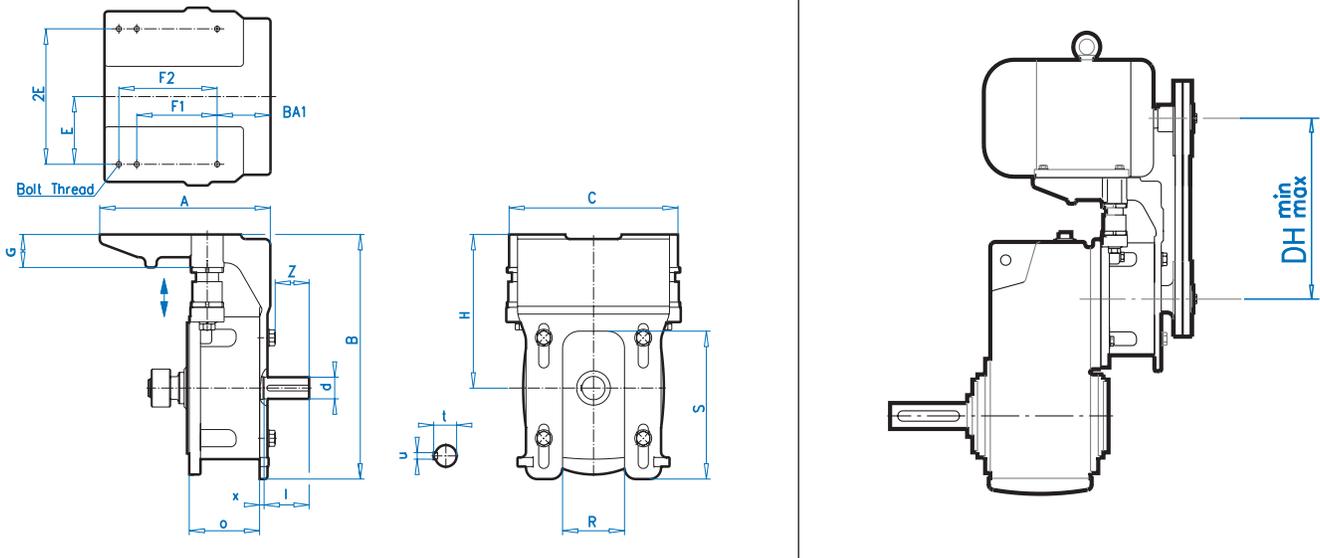

Availability and nomenclature for each type of speed reducer with top mount platform combination is shown in the chart below. Consult NORD for final selection.

## Scoop Mount (S)

Used in industries where quick change of commonly stocked NEMA footed motors is standard practice. NORD Scoops are slotted to allow for motor positioning. An elastomeric coupling and bolt on coupling guard are included. Motors supplied and mounted by the customer must be properly shimmed to match the shaft height. NORD may also supply the motor fully installed.

Scoop motor platforms offer the following advantages.

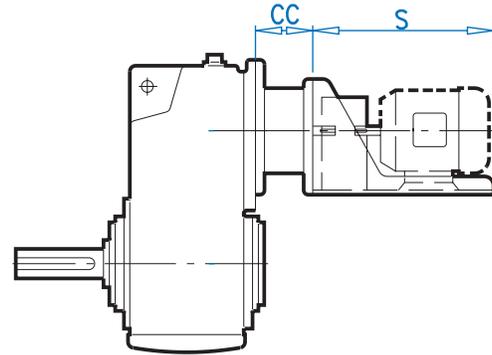

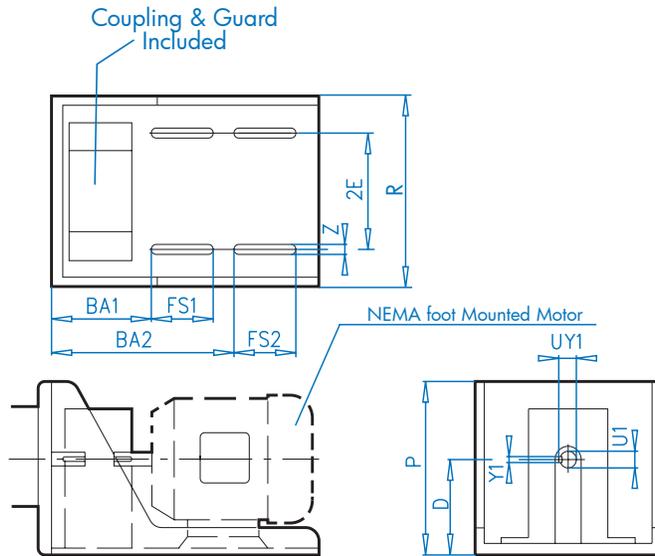

- Heavy duty fabricated steel construction
- Vibration free torsionally stiff design
- Available for mounting in all positions
- Can be swung 90° to the right or left
- Directly mount standard NEMA footed motor
- Motor coupling and safety guard are included

Each Scoop Motor Platform has slotted holes allowing a standard NEMA footed motor to be attached.

## Custom Mounting Interface

NORD can provide custom input adapters typically consisting of a special adapter plate and special coupling to mount non-standard dimensioned motors or other devices.

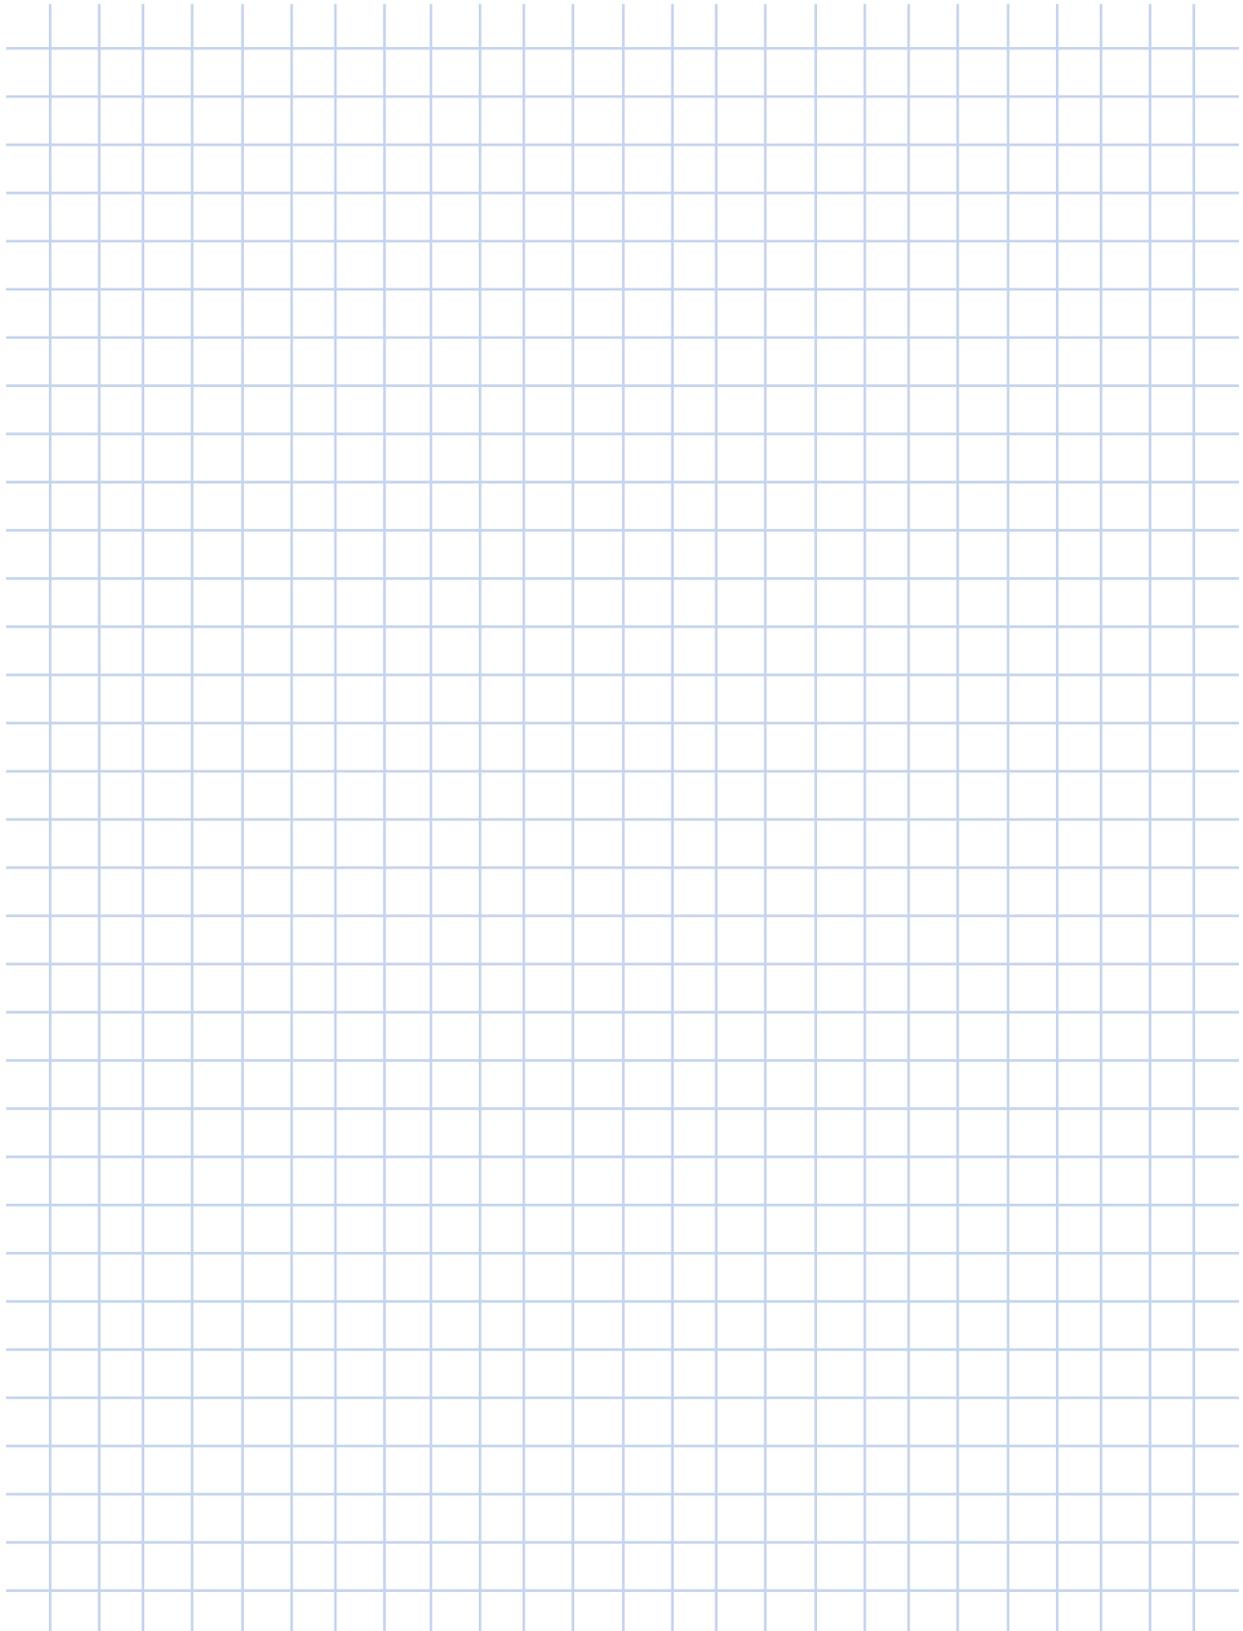

When a custom input adapter is required, special attention needs to be given for each application to be sure the customer receives the performance that is necessary. The following information is required:

- Motor Dimensional Drawing
- Motor Weight
- Motor performance specifications, including torque, horsepower and operating speed ranges.

NORD engineers will review the performance requirements and make a unit selection based on given parameters.

Based upon 1750 rpm				1750 rpm	1150 rpm	875 rpm	580 rpm	-	1 hp	2 hp	5 hp	10 hp	20 hp	30 hp	50 hp	75 hp		
Input Speed				Input Speed					C-face Adapter Maximum Input Power *									

$\diamond$  The maximum input power limit shown is the largest motor power typically combined with the gear unit. These values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.

\* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available combinations and based on a 1750 rpm motor.

Input Speed				Input Speed					C-face Adapter Maximum Input Power *								

◇ The maximum input power limit shown is the largest motor power typically combined with the gear unit. These values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.

\* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available combinations and based on a 1750 rpm motor.

◇ The maximum input power limit shown is the largest motor power typically combined with the gear unit. These values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.

\* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available combinations and based on a 1750 rpm motor.

◇ The maximum input power limit shown is the largest motor power typically combined with the gear unit. These values shown are not the mechanical limit and often may be increased through discussion with our sales or engineering department.

\* The NEMA C-face power limit must also be considered when selecting a reducer. The C-face Adapter's Maximum Input Power values are displayed under the Available combinations and based on a 1750 rpm motor.

**Motor Options ⑤**

**Electrical Motor Options**

- TW - Thermostat
- TF - Thermistor
- SH - Space Heater (select voltage)
  - 110 Volt  230 Volt  460 Volt
- ISO H - Class H insulation
- WU - High Resistance Rotor

**AC Drive Related Motor Options**

- FC - Blower Fan (200-575V 1 & 3 Phase)
- FC - Blower Cooling Fan (115V, 1 Phase)
- IG - Incremental Encoder
- IG\_P - Incremental Encoder with Plug

**IG & IG\_P Options:**

Logic:  TTL  HTL  Push-pull  
 Supply:  4-6V  10-30V  5-30V  
 PPR:  1024  2048  4096

- AG - Absolute Encoder

## Standards

All motors are in accordance with existing standards and regulations:

### NEMA MG 1 - Motors and Generators:

- Electrical performance
- Motors for operation on variable AC vector drive

### UL 1004 – Electric Motors

### CSA C22.2 No. 100-04 - Motors and Generators:

### Industrial Products IEC 60034 - parts 1, 5, 6, 8, 9, 11, 12 and 14.

- Part 1 – General rules
- Part 5 – Types of enclosures
- Part 6 – Types of cooling
- Part 8 – Terminal lead designations and sense of rotation
- Part 9 – Noise limits
- Part 11 – Integrated thermal protection
- Part 12 – Starting Performance
- Part 14 – Mechanical vibration

## Inverter/Vector Duty

NORD single-speed motors are Inverter/Vector Duty. The construction of the NORD motors insulating system takes into account the non-sinusoidal wave forms produced by variable frequency drives. NORD uses high grade insulating components and extra first turn protection as well as double coated wire to ensure long service life when connected to AC vector drives. NORD motors can produce full torque at zero speed if properly sized, selected and controlled.

## IEC 60038 – Standard voltages

	NORD motors carry the CE mark in accordance with the Low Voltage Directive and, if installed properly, the Electromagnetic Compatibility Directive (EMC). The CE mark is required for installation in European Union (EU) states.
	Many NORD motors from frame size 63 to 315 are an Underwriters Laboratories Recognized component per UL standard 1004. <ul style="list-style-type: none"> <li>■ File number E191510</li> </ul>
	The Canadian Standards Association CUS mark indicates that CSA has tested and approved NORD motors according to both US and Canadian standards. It is equivalent to the Underwriters Laboratories RU recognition mark (UL standard 1004) and the CSA mark according to CSA Standard C22.2 No. 100-04 <ul style="list-style-type: none"> <li>■ File number LR112560</li> </ul>
	NORD Energy Efficient motors up to frame 180 have been evaluated by the United States Department of Energy and received a Certificate of Compliance to certify the efficiency ratings. The certificate of compliance is CC 092B.
	NORD Premium Efficient motors up to frame 180 have been evaluated by the United States Department of Energy and received a Certificate of Compliance to certify the efficiency ratings. The certificate of compliance is CC 092B.
	NORD energy efficient motors carry the CSA energy efficiency verification mark. This mark ensures that CSA has verified that NORD motors are designed and manufactured to meet energy efficiency requirements number EEV112560.
	China Compulsory Certification Nr.: 200 701 040 125 842 9
	GOST® certificate for the import of motors into Russia.

## Global Standards and Directives

Energy savings, lowering operational costs, and protecting the environment are all important to our future. That is precisely why NORD supports global efforts to increase energy efficiency and minimize the human impact on our environment.

NORD's energy-saving motors and brake motors include premium efficient designs and optimal designs for intermittent duty applications. All NORD motors are inverter-duty that obtain improved dynamic performance and increased system efficiencies when paired with our high performance AC-drives.

NORD is able to provide motors that satisfy the latest global energy efficiency directives. Energy efficiency overviews by region may be found on the NORD website by clicking on "Products" then "Motor Efficiency Classes".

The screenshot shows the NORD website interface. The main heading is "NATIONAL REGULATIONS". Below it, a paragraph states: "The implementation of the international standard IEC 60034-30-1:2014 will be carried out in different ways." A world map is displayed with various countries highlighted and labeled with their respective flags. To the right of the map is a "SALES CONTACT" button. Below the map, a list of countries is provided, each with a PDF link and file size:

- European Union | PDF (152 KB)
- Switzerland | PDF (140 KB)
- USA | PDF (280 KB)
- Canada | PDF (345 KB)
- Mexico | PDF (222 KB)
- Brasil | PDF (189 KB)
- Australia | PDF (105 KB)
- China | PDF (117 KB)
- South Korea | PDF (171 KB)

This catalogue has been produced with the greatest care on the most current legislation. However, NORD cannot accept liability for technical changes in regards to global requirements.

## Standard Motor Construction

Our motors are an important part of our ability to provide a high quality, competitive, and complete drive system. NORD motors are designed for across-the-line or inverter/vector duty operation. NORD motors are constructed with superior insulating methods to provide excellent moisture protection, low temperature rise, and voltage spike resistance in accordance with NEMA MG1. Low rotor inertia and high starting torque allow peak performance in difficult applications involving high start/stop cycling rates or rapid acceleration/deceleration. Standard motors offer protection from the elements with many standard and optional design features.

NORD offers a variety of high performance motors including:

- NORD continuous duty, premium efficient motors (1–75 HP) satisfy global energy efficiency mandates, NORD’s premium efficient motors provide maximum energy savings, offer low rotor inertia, provide quick starts & stops, & handle high cycle rates in dynamic applications.
- NORD 60 minute duty motors (1 - 40 HP) motors are labeled “60 MIN” duty & are perfectly suited for intermittent or time limited applications. These motors offer higher cycling capacity, lower motor rotor inertia, & lower energy consumption while starting or stopping, as compared to the NORD Premium Efficient motors. NORD can also provide motors that satisfy other periodic duty or intermittent duty ratings.
- NORD continuous duty, standard efficient motors (0.16 – 0.75 HP) satisfy global energy efficiency mandates. Like 60 minute duty motors, these motors offer higher cycling capacity, lower motor rotor inertia, and lower energy consumption while starting or stopping, as compared to the NORD Premium Efficient motors.

### Some of the standard design benefits include:

- Shaft lip seals on both ends of the motor shafts.
- Stator to endbell connections sealed to exclude moisture.
- Double coated magnetic wire insulation.
- Inverter/vector duty insulation system conforms to NEMA MG1, section 31.4 voltage spikes.
- Moisture resistant varnish dipped windings with improved varnish materials.
- Inorganic insulating components for tropical protection.
- Conduit box sealed with gaskets.
- Corrosion resistant alloy materials.
- Threaded cable entry holes.

## Asynchronous Low Voltage Motors

The motors listed in this catalogue are low voltage asynchronous motors, which can be used as gear motors or stand-alone motors.

## Non-Sparking Fan

The standard NORD motor fan is a non-sparking design. The fan will also provide proper airflow in either direction of rotation.

## Terminal Block

Each NORD motor uses a terminal block, which is a superior method of wire termination when compared to pigtail leads. A terminal block ensures long-term reliability of the power connections.

## Inverter/Vector Duty – Voltage Spikes

All NORD motors are constructed with an insulating system designed to withstand the repeated voltage spikes generated by modern AC vector drives. The insulation system withstands the ratings in conformance with NEMA MG1 Section 31.4.4.2 Voltage Spikes.

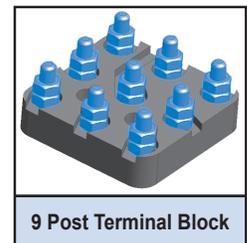

$$V_{\text{peak}} \leq 3.1 \times V_{\text{rated}} \text{ with a Rise time } \geq 0.1 \mu\text{s}.$$

Motor Production

Motor Production

9 Post Terminal Block

Insulation System

## Insulation System

The NORD motor insulation system is designed to provide a superior degree of protection. NORD utilizes the following insulation components:

- Magnet wire – double coated insulation
- Varnish dip impregnation
- Slot liners
- Phase paper & separators
- Top sticks
- Wire sleeve connectors

Other motor manufacturers eliminate some of these insulating components for cost reduction which leads to less reliability.

## Tropical Protection (Anti-fungal)

As a standard the NORD motor insulation system is tropically protected. The insulating and construction components are made of inorganic materials that resist fungal growth.

## Low Inertia

The motor inertia in all NORD motors is extremely low which allows for an increased dynamic motor control capability. Low motor inertia is a significant advantage when using NORD motors with AC vector drives or controllers. NORD motors have the ability to cycle more frequently and require less mechanical energy to start than the standard NEMA frame motors. This leaves more energy to start the load.

## High Starting Torque

NORD motors produce a higher starting torque than what is required by NEMA standards. This is achieved through improved motor winding, rotor design and construction.

## Service Factor

NORD standard motors that are rated 230/460V-60Hz and 332/575V-60Hz have a service factor of 1.15. All other motors have a service factor of 1.0 or as noted in the motor rating tables beginning on page 315.

## Poles / speeds

NORD offers a variety of single and two speed motors in addition to the standard 4 pole motor. NORD single speed motors are inverter/vector duty rated, however, it is not recommended to run a NORD two speed motor with an AC vector drive.

Number of Poles	Synchronous Speed at 60Hz	Synchronous Speed at 50Hz
<b>Single Speed Motors</b>		
4	1800 rpm	1500 rpm
2	3600 rpm	3000 rpm
6	1200 rpm	1000 rpm
<b>Two Speed Motors</b>		
4-2 - single winding	1800/3600 rpm	1500/3000 rpm
8-2 - dual winding	900/3600 rpm	750/3000 rpm

Other speeds available upon request.

## Voltage and Frequency Variation

Voltage and frequency variations are based upon the assumption that the nameplate horsepower will not be exceeded and that the motor temperature may increase. Standard allowable deviations are based upon the type of motor labeling.

Poles	Efficiency	50 Hz NORD Motors			60 Hz NORD Motors		
		Motor Size Range	Power Range	Nominal Voltage	Motor Size Range	Power Range	Nominal Voltage
4	Standard (IE1)	63 S/4 - 100 L/4	0.12 - 2.2 kW	230/400 V Δ/Y	63 S/4 - 200 LX/4	0.16 - 40 Hp	230/460 V Y/YY
		100 LA/4 - 200 LX/4	3 - 30 kW	400/690 V Δ/Y			332/575 V Δ/Y
	Premium Efficient (IE3)	80 LP/4 - 100 LP/4	0.75 - 2.2 kW	230/400 V Δ/Y	80 LP/4 - 180LP/4	1 - 30 HP	230/460 V Y/YY
		100 AP/4 - 180 LP/4	3 - 22 kW	400/690 V Δ/Y			332/575 V Δ/Y
4-2	Standard (IE1)	63 S/4-2 - 160L/4-2	0.10/0.15 - 13/17 kW	400 V Δ/YY	63 S/4-2 - 132 M/4-2	0.13/0.20 - 8.7/10.7 HP	230V or 460V or 575V Δ/YY
8-2		71 S/8-2 WU - 132 M/8-2 WU	0.045/0.22 - 1.4/5.5 kW	400 V Y/Y	71 S/8-2 WU - 132 M/8/2 WU	0.06/0.3 - 1.9/7.4 HP	230V or 460V or 575V Y/Y

## NEMA and CSA Labeled Motors

Variations are based upon the nominal utilization voltage, and not the service (supply) voltage as per ANSI C84.1. Voltage and frequency tolerances follow the guidelines set forth in NEMA MG-1.

Service Voltages	Utilization Voltages	Voltage Variation	Frequency Variation	Voltage/Frequency Variation
120V	115V	+/- 10%	+/- 5%	+/- 5%
208V	200V			
240V	230V			
480V	460V			
600V	575V			

## 50Hz CE Labeled Motors

Standard NORD motors are designed in accordance with IEC 60034-1, It is common practice to display the rated voltage on the motor nameplate. Alternatively, the allowable voltage range may be displayed on the motor nameplate. Allowable voltage and frequency variations are as specified in the table below:

Motor Voltage	Voltage Tolerance	Allowable Voltage Range	Frequency Variation
230/400V	+/- 5%	220-240 / 380-420V	+/- 2%
400/690V	+/- 5%	380-420 / 660-725V	+/- 2%

Voltage harmonization was introduced to the European Union in 1983, as part of IEC 60038 (formerly IEC 38). From 1995-2008 a transition period allowed motors to be labeled with the "harmonized voltage" however a reduced allowable voltage tolerance was permitted by the IEC 60038 standard as displayed in the table below:

Previous Motor Voltage	Harmonized Motor Voltage	Voltage Tolerance
220/380V	230/400V	+6 / -10%
240/415V	230/400V	+10 / -6%
380/660V	400/690V	+6 / -10%

## US and Canadian Standard (CUS)

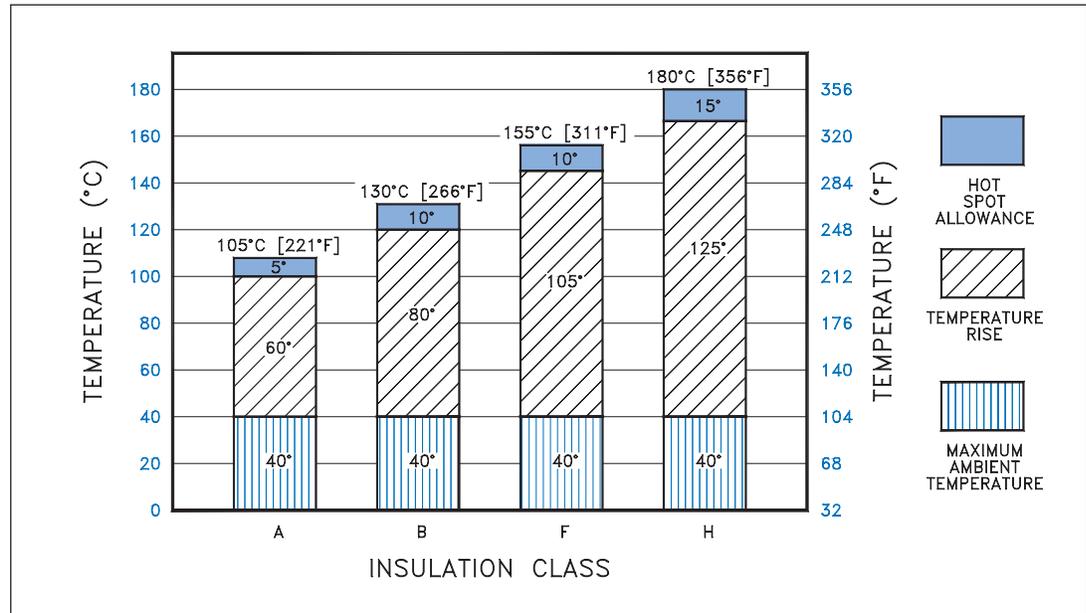

CUS motor construction defines that NORD motors are constructed in accordance to UL 1004 (electric motors) and CSA C22.2 No. 100-04 (motors and generators) guidelines. This option is standard for 208, 230, 460, and 575 Volt operation at 60 Hz.

Motors nameplated with the CUS option will be marked  and  indicating that the Underwriters Laboratories and CSA have tested and approved NORD motors according to both US and Canadian standards.

## Insulation Class

NORD motors are constructed with a thermal class F insulating system. These motors are also designed for a class B temperature rise of up to 80°C. The use of class F insulation with a class B temperature rise provides increased operating life. Motors constructed with class H insulation are also available as an option.

## Ambient Temperature

NORD motors are designed to operate with a maximum ambient temperature of 40°C (104°F). If the motor's operating environment exceeds 40°C, the motor's nominal power  $P_n$  either needs to be de-rated (see table below) or upgraded insulation is required.

Ambient temp [°F]	113	122	131	140
Ambient temp [°C]	45	50	55	60
De-rate factor	0.96	0.92	0.87	0.82

Motor Rated Power =  $[P_n \times \text{De-rate factor}]$

## Elevation

NORD motors are designed to operate at an elevation of up to 3300 ft (1000 m) above sea level. At higher elevations the air is thinner resulting in less cooling capacity. If the motor's installation elevation exceeds 3300 ft (1000 m), the motor's nominal power ( $P_n$ ) either needs to be de-rated (see table below) or upgraded insulation systems need to be considered.

<b>Altitude [ft]</b>	5000	6500	8200	10000	11500	13000
<b>Altitude [m]</b>	1500	2000	2500	3000	3500	4000
<b>De-rate Factor</b>	0.97	0.94	0.90	0.86	0.83	0.80

**Motor Rated Power =  $[P_n \times \text{De-rate factor}]$**

## Enclosure

The NORD standard motors are provided with Totally Enclosed Fan-Cooled (TEFC) with an IP55 enclosure rating. Other enclosures are available, including Totally Enclosed Non-Ventilated (TENV), Totally Enclosed Blower-Cooled (TEBC), and IP66.

The motor integral cooling fan provides proper air flow in either direction of rotation. The IEC cooling classification is IC 411 according to IEC 60034-6.

	<b>1st digit Foreign body protection</b>		<b>2nd digit Water protection</b>
<b>0</b>	No protection	<b>0</b>	No Protection
<b>1</b>	Protected against solid objects 50mm (2 in) in diameter and larger	<b>1</b>	Protected against dripping water
<b>2</b>	Protected against solid objects 12 mm (1/2 in) in diameter and larger	<b>2</b>	Protected against dripping water up to a 15 degree angle
<b>3</b>	Protected against solid objects 2.5 mm (0.1 in) in diameter and larger	<b>3</b>	Protection against sprayed water
<b>4</b>	Protected against solid objects 1 mm (0.04 in) in diameter and larger	<b>4</b>	Protection against splashed water
<b>5</b>	Protected against dust	<b>5</b>	Protection against water jets
<b>6</b>	Dust tight	<b>6</b>	Protection against high pressure water jets
<b>7</b>	--	<b>7</b>	Protection against intermittent submersion in water
<b>8</b>	--	<b>8</b>	Protection against continuous submersion in water

## Duty Classes

The following duty types are defined in IEC 60034-1.

Duty Type	Explanation Excerpts
S1	Continuous operation at a constant load, the motor reaches thermal equilibrium
S2	Short-time operation at a constant load for a given time followed by a time of rest until the motor is completely cooled down to ambient temperature. Example: S2-10 minutes Recommended values for determination: 10, 30 min.
S3	Sequential intermittent operation, identical run and rest cycles with a constant load. Temperature equilibrium is never reached. Starting current has little effect on temperature rise. The cyclic duration factor (cdf) indicates the portion of operation time in relation to a complete duty cycle. The typical duty cycle time is 10 minutes, unless otherwise specified. Example: S3-40% Recommended values for determination: 25, 40, 60%
S6	Continuous operation with intermittent load sequential, identical cycles of running with constant load and running with no load. No rest periods. Example: S6-40% Recommended values for determination: 25, 40, 60%

## Power Increasing Factor for Short-term & Intermittent Operation

Motor ratings in this catalog are based on continuous duty operation (S1). If a motor is designed for S1 duty, but is to be operated for short-time or intermittent operation it can be subjected to higher loads. The available motor power can be raised above the motor rated power by the “increasing factor” in the table below.

Duty Type		Increasing Factor
S2	Operating time	10 min
		30 min
S3	Cyclic duration factor (cdf)	25%
		40%
		60%
S6	Cyclic duration factor (cdf)	25%
		40%
		60%

Motor Rated Power =  $[P_n \times \text{Increasing factor}]$

## Protective Features

All NORD Motors and Speed Reducers are constructed to provide a high degree of protection against wet and severe environments. NORD motors and speed reducers are sealed against moisture ingress and use corrosion and moisture resistant components. NORD has recently made many enhancements in the motor and gear units standard construction to provide improved environmental protection. Many of the standard protection features of the NORD units are only available at an additional cost from other motor and gear drive suppliers. NORD designs all gearmotors, speed reducers and motors for installation in harsh industrial, commercial and municipal installation environments.

## Mounting Positions

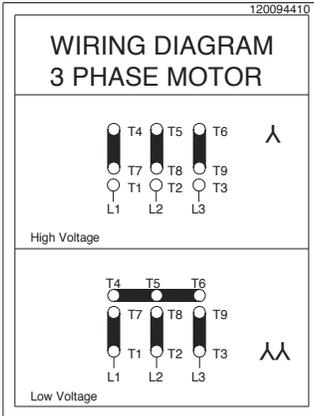

The motor mounting position helps to determine the use of specific options as well as help specify the terminal box location as well as the conduit entry location. However, unless a drip cover is used for shaft-up or shaft-down applications, drip-proof motors must be mounted in the horizontal or sidewall position to meet its enclosure definition. If considering any mounting positions that are not shown as catalog-standard options, it is critical that the customer consult with NORD prior to ordering. When mounting motors, secure the motor tightly to the mounting base of your equipment or onto to a flat and rigid surface.

## Motor Options & Construction

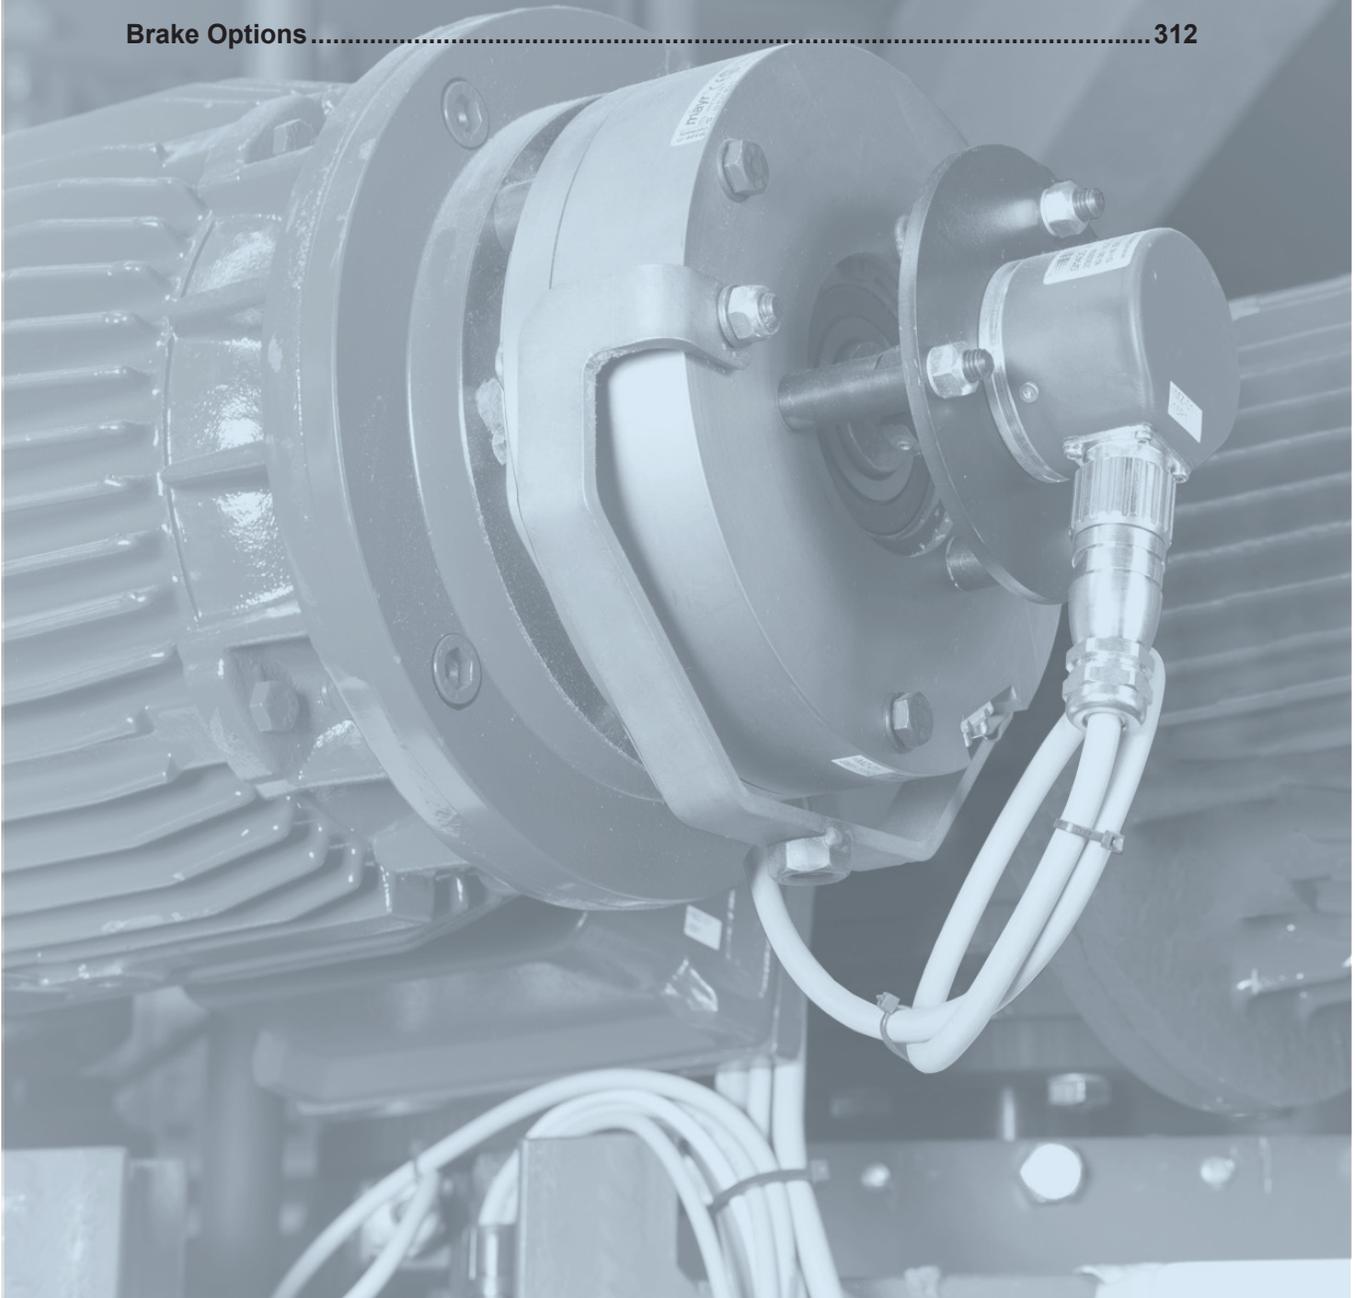

NORD motors are stocked in one of two ways. The first method is to stock a complete motor that is ready to be assembled to a gear reducer or shipped as a stand alone motor. The second method, the motor is assembled from component parts. The **M Modify** next to a motor option designates that the option can be added to a complete motor by simple modification. The **B Build** next to a motor option indicates that the motor will need to be built from component parts in order to incorporate the motor option.

## Motor Brake (Option BRE)

The standard NORD motor brake is spring-set when power is removed from the BRE circuit (power-off). The brake coil utilizes a DC voltage supplied through a rectified power source.

### Advantages

- Each NORD motor frame size has a number of available brake sizes, each with different torque capacities.
- Brake torque adjustments are possible by changing the brake spring combinations. In addition, brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with an additional spanner-nut adjustment on the back of the brake.
- NORD brakes provide a high degree of safety because when power is removed the brake will automatically set to hold the load.
- The brake rotor or brake disc is environmentally safe and asbestos-free.
- The connection between the rectifier and the brake coil is completed at the factory and the brake air-gap is factory-set but can be adjusted in the event of wear.

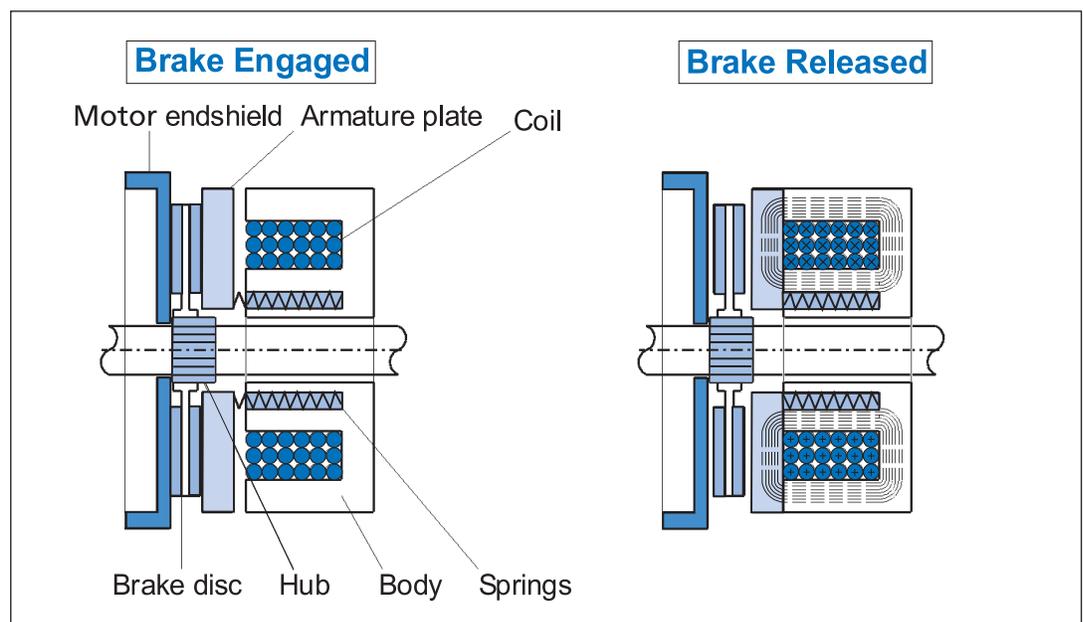

### Basic Brake Operation

The standard NORD motor brake is “spring set”. When power is removed and the brake is de-energized (power-off), the brake springs exert a force against the armature plate in turn preventing the brake rotor (or brake disc) from rotating. When the brake coil is energized (power-on), a magnetic field pulls the armature plate across the air gap to the brake casing, which releases the brake rotor and allows the motor shaft to rotate.

NORD brakes are DC voltage brakes and in most instances are supplied with a motor mounted brake rectifier for easy connections to AC power. AC power is taken directly from the power line or from the terminal block of the motor and converted to DC by the supplied rectifier.

**i**
IMPORTANT NOTE
**i**

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, the AC power must be supplied separately to the brake rectifier.

Brakes

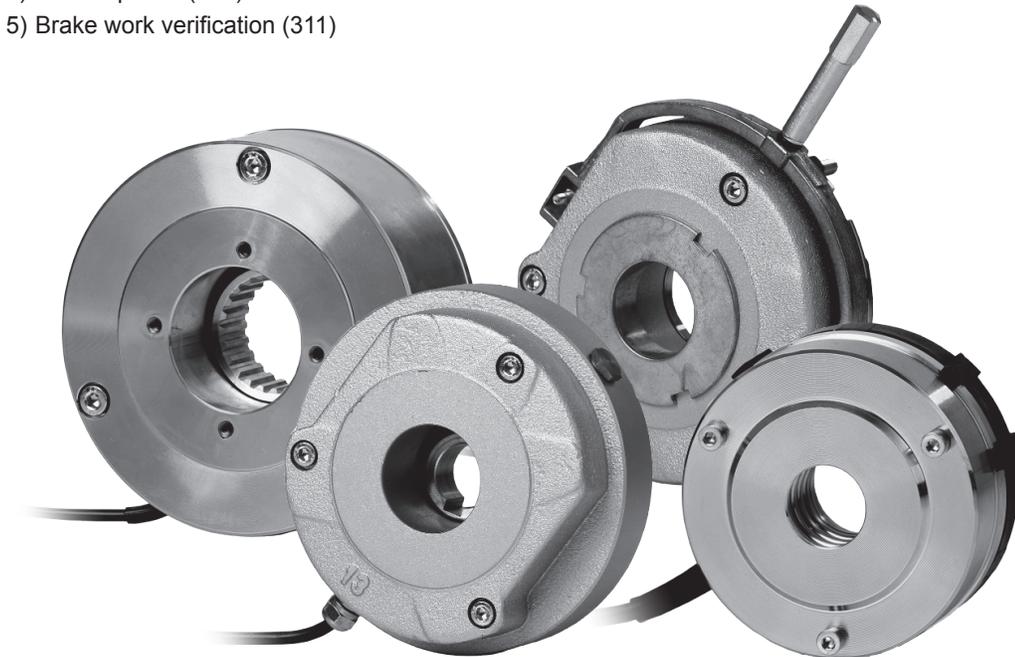

## Brake Selection

The selection of a motor brake system is broken down into five phases. The selection of the braking torque, the selection of the braking times (release times and setting times), the selection of the electrical supply and connection, the selection of brake options, and the final phase is the verification of the permissible brake work.

Each NORD motor may be supplied with a number of brake torque sizes. Each brake may be adjusted to different brake torque values.

### Selection steps

- 1) Brake torque selection (304)
- 2) Brake times & electrical selection (306)
- 3) Electrical supply and connection (306)
- 4) Brake options (312)
- 5) Brake work verification (311)

# Brake Torque Selection

## Brake Torque Selection

Each NORD motor size has a number of brake torque sizes available. The BRE value in the table below is the standard brake torque size for each motor.

Example for ordering: SK 32 - S/4 **BRE10** (**BRE 10** indicates a brake torque size of 10 Nm)

## General Selection Considerations

NORD relies on the equipment builder to specify appropriate brake sizing for their application, while giving consideration to the following:

- For most applications, we advise sizing the brake to 1.5 - 2 times the motor rated torque.
- For vertical applications, it may be advisable to size the brake up to 3 times the motor rated torque.
- For some applications, it may be necessary to specify a reduced brake torque setting to prevent excessive peak load conditions developed at the reducer output.
- On travel drive applications, excessive brake torque may lead to wheel skid; in addition on crane applications excess hoist-cable swing can result.

	<b>CAUTION</b>	
BRE800 and BRE1200 brakes may only be controlled with a fast reaction rectifier (overexcitation), the maximum permissible nominal currents of the rectifier must be considered!		

Motor Size & Efficiency			Brake Size and Torque

<b>CAUTIONS</b>	
⚠	<ul style="list-style-type: none"> <li>• <b>Brake torque</b> - The brake torque is measured with a mean friction radius of the brake pad surface with a circumferential speed of 1m/sec (197 fpm).</li> <li>• <b>Brake torque tolerance</b> - For different applications and operating conditions, brake torque can vary from +40/-20% compared to the rated brake torque.</li> <li>• <b>Hoisting (lifting/lowering) applications</b> - must have the brake wired for fast response (DC-switching)</li> <li>• <b>Initial operation &amp; wear-in period</b> - In new condition, the brake will have a reduced torque of up to 30%. In order to achieve full rated brake torque, a short run-in period is required. The run in time will vary depending on system loads.</li> <li>• <b>The brake rotor or brake pad</b> - must be protected against foreign matter, oil and grease. Contaminants of this type can greatly influence wear and reduce breaking torque.</li> </ul>

## Brake Torque Adjustment (ADJ)

Brake torque adjustments are possible by changing the brake spring combinations or by removing springs.

### Brake Torque Reduction - Spring Removal

"Brake Size"	7 Springs		5 Springs		3 Springs	
	[Nm]	[lb-ft]	[Nm]	[lb-ft]	[Nm]	[lb-ft]
BRE 5	5	3.7	3.5	2.6	2	1.5
BRE10	10	7.4	7	5.2	4	3.0
BRE20	20	14.8	14	10.3	8	5.9
BRE40	40	29.5	28	20.7	17	12.5
BRE60	60	44.3	43	31.7	26	19.2
BRE100	100	73.8	70	51.6	42	31.0
BRE150	150	111	107	78.9	65	47.9
"Brake Size"	8 Springs		6 Springs		4 Springs	
	[Nm]	[lb-ft]	[Nm]	[lb-ft]	[Nm]	[lb-ft]
BRE250	250	184	187	138	125	92
BRE400	400	295	300	221	200	148
BRE800	800	590	600	443	400	295
BRE1200	1200	885	900	664	600	443

When adjusting the brake torque, start by removing the outer springs at opposite corners to prevent uneven brake wear.

On brake sizes 5-150 Nm (3.7-111 lb-ft) full brake torque is achieved with all (7) springs. The brake springs are placed in such a manner where there are (3) inner and (4) outer springs.

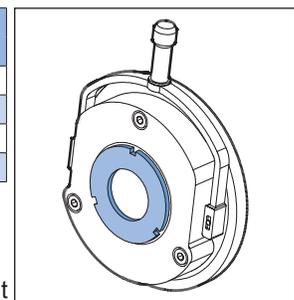

On brake sizes 250-1200 Nm (184-885 lb-ft) full brake torque is achieved with all (8) springs. The brake springs are placed in such a manner where there are (4) inner and (4) outer springs.

### Spanner Nut Adjustment

"Brake Size"	Torque Reduction*		Max. Turns	Minimum Torque*	
	[Nm]	[lb-ft]		[Nm]	[lb-ft]
BRE 5	0.2	0.15	6	0.8	0.59
BRE10	0.2	0.15	12	1.6	1.18
BRE20	0.3	0.22	12	4.4	3.25
BRE40	1	0.74	9	8.0	5.90

\* With the minimum number of springs and maximum number of turns to the spanner nut.

\* Per each turn of the spanner nut

In addition, brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with a threaded adjustment nut or spanner nut. Additional fine torque adjustment can be made by unscrewing the spanner nut a number of turns or "clicks" with a spanner wrench.

## Brake Times & Electrical Selection

Brake timing performance is critical in selecting the optimal brake system. NORD brakes can provide exceptional performance in terms of the release (start) times and engagement (stop) times. Use the following guidelines in order to select the correct brake control components and connections.

- 1) Determine if the brake needs to be wired directly from the motor terminal block or powered by a separate source.
  - If you are using a AC vector drive, soft-start or a two- speed motor you will need to supply the rectifier from a separate power source.
  - If the motor is powered direct across-the-line the rectifier power can be supplied from the motor's terminal block.
- 2) What type of performance do I need?
  - Is the standard brake performance OK?
  - Is a higher performance required for fast brake release or very fast brake stopping?
- 3) Determine the brake supply voltage and check the rectifier compatibility table on page 308.

## Selection Suggestions

### When Fast or Very Fast Stopping is Recommended

Any applications that require quick stops and positive action at stand-still, as well as all vertically mounted applications.

#### Recommended Applications

- conveyors and inclined conveyors
- hoists and lifts
- bulk material handling equipment (bucket elevators, idler conveyor's)

### When Fast-Release is Recommended (Overexcitation)

Any application that is very high-cycling with frequent starts and stops. These applications require the brake to release very-quickly in order to avoid excessive heat build-up in the AC motor and brake coil.

#### Recommended Applications

- Index conveyors
- Diverters
- Storage and retrieval crane systems

	<b>CAUTION</b>	
Hoisting (lifting/lowering) applications - must have the brake wired for fast brake engagement.		

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
<b>Motor Terminal Block</b>	Standard	Standard (AC switching)	10	GVE/GHE/GUE
	Standard	Fast (DC switching)	15	GVE/GHE/GUE
	Standard	Very Fast (Reduced power holding)	40	GPE/PMG
	Fast (Overexcitation)	Standard (AC switching)	30	GPE/PMG
	Fast (Overexcitation)	Fast (DC switching)	35	GPE/PMG
<b>Separate Power Source</b>	Standard	Standard (AC switching)	20	GVE/GHE/GUE
	Standard	Fast (DC switching)	25	GVE/GHE/GUE
	Standard	Very Fast (Reduced power holding)	55	GPU/PMG
	Fast (Overexcitation)	Standard (AC switching)	45	GPU/PMG
	Fast (Overexcitation)	Fast (DC switching)	50	GPU/PMG

\* Braking methods referenced in connection diagrams on pages 134 - 144 of the M7000 (09.15) catalog

#### Rectifier Styles

**GV** - Full Wave Rectifier (Bridge)

**GH** - Half Wave Rectifier

**GU** - Combination Rectifier, can be connected full or half wave

**GPE** - Hybrid Rectifier, Full wave then switches to half wave.

**PMG** - Hybrid Rectifier, Full wave then switches to half wave.

**GPU** - Hybrid Rectifier, Full wave, then switches to half wave. Has integrated DC Switching via voltage sensing.

\* Holding Brakes with emergency-stop properties - switched with fast acting brake rectifier

### Release times

$t_1$  – Brake release time - Standard

$t_{1,OE}$  – Brake release time – Overexcitation (GP)

### Set (stop) times

$t_{2,AC}$  – Brake set time – AC switching

$t_{2,DC}$  – Brake set time – DC switching

$t_{2,DCRP}$  – Brake set time – DC switching reduced power

$t_{2,IR}$  – Additional brake stopping of the IR relay

## IMPORTANT NOTE

An increased air gap will alter the braking times listed above.

## Brake Size Calculation

Torque and inertias below are based on the motor speed. Load side torques must always be divided by the gear reduction ratio. Inertias must be divided by the square of the gear ratio. You must also consider any external reduction ratio outside the gearbox.

### Selection for holding loads (static)

$$T_{req} = T_{stat} = T_{load} \times K$$

### Selection for stopping loads (static + dynamic)

$$\sum J = J_{motor} + \frac{J_{load}}{i^2}$$

Typically other inertias, like the gearbox, can be ignored.

$$T_{dyn} = \frac{\sum J \times n}{25.7 \times t}$$

$$T_{req} = (T_{dyn} + T_{load}) \times K$$

For driving loads use:  $-T_{load}$

For overhauling loads use:  $+T_{load}$

## Brake Work Verification

$$W = \frac{\sum J \times n^2}{5880} \times \frac{T_B}{T_B \pm T_{load}} \Rightarrow W \leq W_{max}$$

For driving loads use:  $+T_{load}$

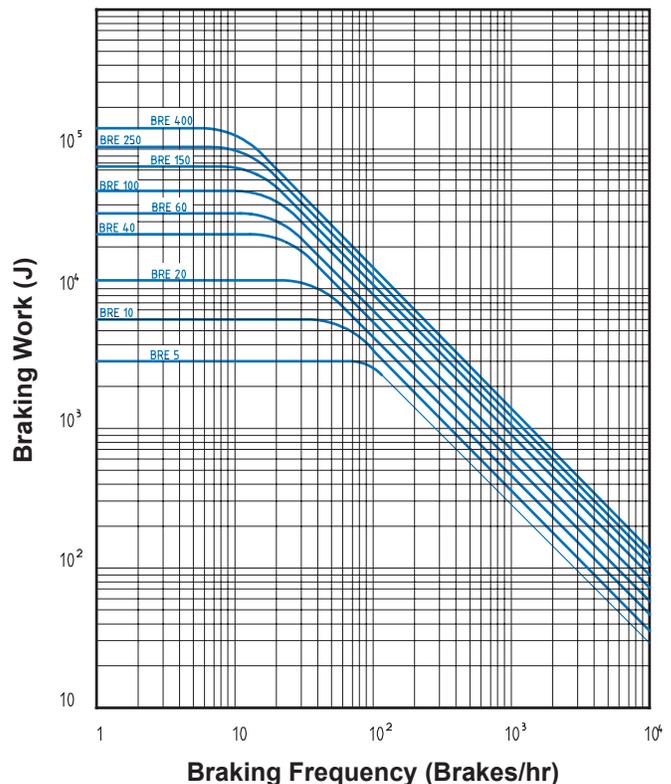

For overhauling loads use:  $-T_{load}$

The permissible values for  $W_{max}$  (Friction work) depend on the stopping frequency. See diagram at right.

In applications where the brake is operated frequently, two brake work values should be evaluated to ensure adequate brake life: the braking work compared to the braking frequency and the maximum work limit for a single operation, such as an E-stop. Reviewing these two values will help determine the optimal solution and ensure long brake life.

## Abbreviation Key

c/h	=	Number of brakes per hour
J [lb-ft <sup>2</sup> ]	=	Inertia
J <sub>motor</sub> [lb-ft <sup>2</sup> ]	=	Motor inertia
i	=	System reduction ratio
K	=	Safety factors. Based on application and according to industry rules and practices Hoisting >2 Hoisting with people >2..3 Travel drives 0.5 to 1.5
T <sub>B</sub> [lb-in]	=	Brake torque
T <sub>dyn</sub> [lb-in]	=	Dynamic torque
T <sub>req</sub> [lb-in]	=	Required brake torque
T <sub>load</sub> [lb-in]	=	Load torque
T <sub>stat</sub> [lb-in]	=	Static torque
n [rpm]	=	Motor speed
t <sub>r</sub> [sec]	=	Stopping time
W [lb-ft]	=	Brake work
W <sub>max</sub> [lb-ft]	=	Maximum brake work for one brake operations

## Brake Options

Abbreviation	Description
ADJ	Torque Adjustment - Brake torque may be adjusted at the factory
DBR	Double Brake (2xBRE) - Double brakes are used for redundancy and additional safety
FHL	Locking Hand Release Lever - Lockable manual hand release lever
HL	Hand Release Lever - Manual hand release lever
HLH	Hand Release Lever with Hole - Hand lever with 5.5 mm hole
IP66	IP66 Brake Enclosure - Brake with IP66 enclosure
IR	Current Sensing Relay - Fast brake engagement (stopping) without external control equipment
MIK	Micro-Switch - Brake fitted with a micro-switch for sensing the brake state (released or engaged)
NRB1	Quiet Brake Release - An o-ring is placed between the coil body and the armature plate for noise reduction
NRB2	Quiet Brake Motor Operation - An o-ring is placed between the carrier hub & the armature plate to prevent clattering.
RG	Corrosion Protected Brake - Corrosion protected brake
SR	Dust & Corrosion Protected Brake - Dust & corrosion protected brake

## Rectifier Options

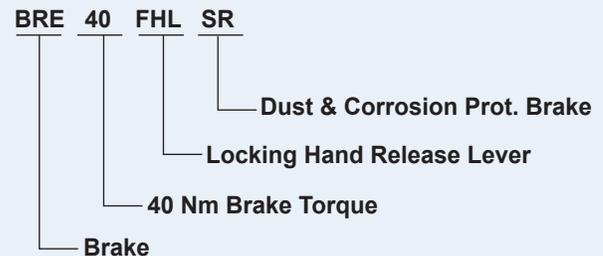

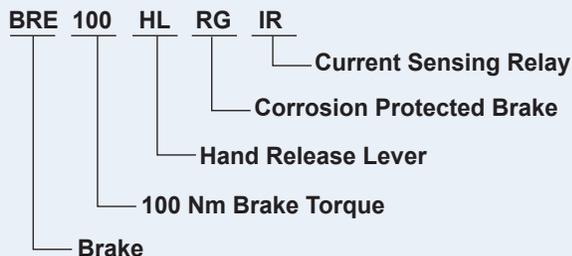

Abbreviation	Description
<b>Rectifiers</b>	Most NORD brakes are provided with a rectifier that converts AC voltage to DC voltage. Rectifiers are used because most motors are AC powered, but brakes require DC power.
GHE	Half Wave Rectifiers
GPE	Push Hybrid Rectifiers - External DC Switching
GPU	Push Hybrid Rectifiers - Integrated DC Switching
GUE	Dual Rectifier - Full/Half-Wave
GVE	Full Wave Rectifiers
PMG	Push Hybrid Rectifier - Integrated DC Switching
EBGR	Digital Input Dual Wave Rectifier

For detailed brake option and rectifier information please refer to the M7000 motor catalog

## Brake Nomenclature

## Ordering Examples

Brake, 100 Nm with a hand release lever, corrosion protected brake, and a current sensing relay.

Brake, 40 Nm with a locking hand release lever and dust & corrosion protected brake.

# NORD GEAR CORPORATION

## Terms and Conditions of Sale

### 1. CONTRACT

Any contract between Nord Gear Corporation, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller. Accordingly, the Buyer and Seller acknowledge and agree that the terms and conditions set forth below and on the face hereof shall govern Buyer's purchase of the goods described on the face hereof and shall take precedence over and represents the final agreement between Buyer and Seller, notwithstanding any inconsistent, contradictory or other prior or further conditions contained in any oral or written request or purchase order issued by Buyer or any other document furnished by Buyer in connection with its purchase of the Goods, regardless of whether such document or documents are exchanged simultaneously with this Invoice or prior or subsequent thereto. Any additional or different terms or conditions which may appear in any communication, oral or written, from Seller, its officers, employees, agents or representatives, are hereby expressly rejected and shall not be effective or binding upon the Seller, unless specifically hereafter agreed to in writing by Seller and no such additional or different terms or conditions in any document submitted to Seller by Buyer shall become part of the contract between Buyer and Seller, unless such written acceptance by Seller specifically recognizes and assents to their inclusion. Any objection by Buyer to the terms and conditions hereof shall be ineffective unless Seller is advised in writing thereof within two (2) days of the date of this Invoice.

### 2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Corporation's home office in Waunakee, Wisconsin, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

### 3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Waunakee, Wisconsin. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection permits required.

### 4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by the Buyer, its agents, servants, employees, or by carriers. Such obligations under this warranty are limited to remedying any deficiencies in the goods at Waunakee, Wisconsin, or at such place or places in the United States of America as may be designated by Seller. THIS WARRANTY SHALL PERTAIN TO ANY PART OR PARTS OF ANY GOODS TO WHICH BUYER OR ITS ASSIGNS HAS GIVEN WRITTEN NOTICE OF CLAIMED DEFECTS TO SELLER. NORD GEAR CORP. WARRANTS ITS PRODUCTS AGAINST DEFECTS IN MATERIAL AND WORKMANSHIP FOR A PERIOD OF 12 MONTHS FROM DATE OF INSTALLATION OR 18 MONTHS FROM DATE OF SHIPMENT WHICHEVER COMES FIRST ON ALL COMPONENTS. 36 MONTHS FROM DATE OF INVOICE OR 24 MONTHS FROM DATE OF INSTALLATION WHICHEVER COMES FIRST ON GEARS AND HOUSINGS ONLY. PARTS WHICH ARE SUBJECT TO OPERATIONAL WEAR AND TEAR, SUCH AS BELTS & TRACTION DISCS, ARE NOT COVERED BY THE LIMITED WARRANTY. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which of Seller's option shall promptly thereafter be returned to Seller or its nominees. THE LIMITED WARRANTY SET FORTH HEREIN IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH HEREIN, SELLER HAS MADE AND MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED. AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO, THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE ANY WARRANTY, EXPRESS OR IMPLIED. SELLER MAKES NO REPRESENTATIONS AS TO THE CAPACITY OR PERFORMANCE OF THE GOODS SOLD HEREUNDER, EXCEPT AS SET FORTH IN THE INVOICE'S SPECIFICATIONS OR OTHER VALID AGREEMENT OR CONDITION AGREED TO BETWEEN THE PARTIES, AND ANY SUCH REPRESENTATIONS ARE EXPRESSLY CONDITIONED UPON THE CORRECTNESS OF THE DATA AND INFORMATION FURNISHED BY THE BUYER AND UPON THE GOODS BEING PROPERLY INSTALLED AND MAINTAINED. THE REMEDIES OF THE BUYER PROVIDED HEREUNDER ARE EXCLUSIVE. In no event shall the Seller be liable to the Buyer or to any other person for any loss or damage, direct or indirect, arising out of or caused by the use or operation of the goods, or for the loss of profits, business, or good will, or for any incidental, special or consequential damages. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any and all costs of the return to the Seller of such goods and all related costs to remove and re-install such goods, shall be borne by Buyer. Goods sold but not manufactured by the Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provision of the preceding paragraph of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gearmotors are in conformity with Seller's tests.

### 5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. Buyer may not return any goods claimed to be in non-conformity without Seller's prior written authorization. Goods returned without permission will not be accepted, including for credit, and will be returned to Buyer, F.O.B. Seller's plant. Any claim based on the receipt of damaged Goods must be filed with the carrier which delivered the goods. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any change which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. The liability of the Seller to Buyer, if any hereunder, for breach of warranty, contract, negligence or otherwise, shall in no event exceed the amount of the purchase price of the goods sold with respect to which any damages are claimed. Shipping dates are estimates unless parties expressly agree on time of the essence.

### 6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

### 7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer: provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

### 8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchasers at public or private sale, and hold the Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

### 9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for a state court receivership is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order of judgement entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganization or if a state court receivership is filed against Buyer, then, at its option Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

### 10. DELIVERY

(a) Any indicated dates of delivery are approximate only, but NORD Gear will attempt to meet them whenever possible. (b) NORD Gear will not be liable for any penalty clauses contained in any specifications or order submitted unless agreed to in writing by an authorized officer of NORD Gear Corporation. (c) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (d) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

### 11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Unless otherwise provided, terms of payment are 30 days net from the date of invoice with a 1% discount if paid within 10 days of date of invoice. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for a state court receivership is filed against Buyer, or if the Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

### 12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable attorney's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such forthwith, together with reasonable attorney's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable attorney's fees, shall forthwith be due and payable from Buyer to Seller. Buyer agrees to pay all reasonable costs and reasonable attorney's fees incurred by Seller in enforcing Seller's rights against Buyer, including Seller's right to payment of the purchase price of the goods and Buyer's payment of all other amounts owing to Seller required under this Invoice and Conditions of Sale.

### 13. SECURITY INTEREST AND TITLE

In states and localities which are governed by the Uniform Commercial Code, this contract shall serve as security agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Uniform Commercial Code regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale. In states and localities where the Uniform Commercial Code does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under the Uniform Commercial Code with the proper registers or offices, or for filing or recording the conditional sales contract.

### 14. SALES AND USE TAX

Buyer agrees to bear and pay any sales or use tax in connection with the purchase herein, and to hold the Seller harmless from payment. At the option the Seller, Buyer shall give evidence of payment or of exemption certificate.

### 15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

### 16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

### 17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

### 18. PACKING

The Buyer will be charged for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

### 19. CHANGES/CANCELLATION

NORD Gear will not accept changes in specifications to a confirmed order unless such changes are requested in writing and confirmed back in writing. In addition, the purchaser must to agree to any additional charges that may arise from the change. Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

### 20. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operation procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to defend, indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to defend, indemnify and save Seller harmless from any such claims arising from such accident.

### 21. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and effect, except that the parties shall try to replace such invalid provision closest to their original mutual intentions. (b) This Invoice and these Conditions of Sale constitute the entire agreement between the parties regarding the subject matter hereof and supercedes all prior agreements, understandings and statements, whether oral or written, regarding such subject matter. No modification to, change in or departure from, the provisions of this Invoice and Conditions of Sale shall be valid or binding on Seller, unless approved in writing by Seller. No course of dealing or usage of trade shall be applicable unless expressly incorporated into this Invoice and Conditions of Sale. Any amendments to any contract or contracts between the parties shall be valid only upon the written consent of both parties.

### 22. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

### 23. APPLICABLE LAW AND VENUE

All contracts and their interpretation are governed by the applicable, substantive laws of the State of Wisconsin. Any litigation brought by the Buyer regarding this Invoice or goods purchased hereunder may only be brought in the Circuit Court for Dane County, Wisconsin.

# NORD GEAR LIMITED

## Terms and Conditions of Sale

### 1. CONTRACT

Any contract between Nord Gear Limited, hereinafter designated as "Seller", and the party or parties accepting these terms and conditions of sale and any agent, officer, servant, employee or subcontractor of such party or parties, hereinafter designated as "Buyer", is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller.

### 2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Limited's home office in Brampton, Ontario, and upon such confirmation the orders shall become a contract binding upon the parties hereto, their successors and assigns.

### 3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Brampton, Ontario. Prices and discounts are subject to change without notice until the order is accepted. Seller's prices do not include cost of any inspection permits required.

### 4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by Buyer, its agents, servants, employees, or by carriers. This warranty shall pertain to any part or parts of any goods to which Buyer or its assigns has within one year from date of delivery given written notice of claimed defects to Seller. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH ABOVE, SELLER HAS MADE NO WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE AN EXPRESS WARRANTY. The Buyer's exclusive remedy for claims arising from defective or nonconforming goods shall be limited to the repair or replacement thereof at the Seller's sole option. THE SELLER SHALL NOT BE RESPONSIBLE OR LIABLE FOR CONSEQUENTIAL DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE SALE, DELIVERY, USE, PERFORMANCE, OR SERVICE OF THE GOODS SOLD UNDER THIS AGREEMENT. SELLER SHALL NOT BE LIABLE FOR ANY LOST PROFITS OR FOR ANY CLAIM OR DEMAND AGAINST SELLER BY ANY PARTY. IN NO EVENT WILL SELLER BE LIABLE FOR SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES, EVEN IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SELLER'S AGGREGATE LIABILITY FOR DAMAGES UNDER THIS AGREEMENT, WHETHER ARISING FROM OR BASED UPON BREACH OF WARRANTY, BREACH OF CONTRACT, TORT OR OTHER CAUSE OF ACTION, SHALL IN NO CASE EXCEED THE PURCHASE PRICE THAT BUYER PAYS FOR THE PARTICULAR GOODS INVOLVED. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any costs of the return of such goods to Seller shall be borne by Buyer. Goods sold but not manufactured by Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provisions of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gear motors are in conformity with Seller's tests. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE SELLER DOES NOT ASSUME, NOR DOES IT AUTHORIZE ANY PERSON TO ASSUME, ON ITS BEHALF, ANY OTHER OBLIGATION OR LIABILITY.

### 5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. The samples, measurements, dimensions and weights contained in Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. Seller reserves the right to make any changes which Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications of standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the cause may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business of good will. Shipping dates are estimates unless parties expressly agree on time of the essence.

### 6. FORCE MAJEURE

The obligation of Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order of contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

### 7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by Buyer, provided, however, that if Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, Seller may, on fifteen (15) days written notice to Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or to treat the entire contract or contracts with Buyer as breached by Buyer and pursue its remedies for breach.

### 8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for Buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchaser at public or private sale, and hold Buyer liable for any difference between (A) the contract price of the goods, and (B) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

### 9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for appointment of a receiver is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to Buyer, to Seller, as actually paid in money, is abated by any order of judgment entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganization or if a state court receivership is filed against Buyer, then, at its option, Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

### 10. DELIVERY

(A) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to Buyer, and thereafter the risk of loss or damage to the goods shall be upon Buyer. (B) If Buyer does not give delivery instructions to Seller at least ten (10) days prior to the delivery date ex factory confirmed by Seller, Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option may store the goods on the pier or on any warehouse at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

### 11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if Buyer becomes bankrupt or insolvent, or any petitions for reorganization or for appointment of a receiver is filed against Buyer, or if Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of Seller. Interest on the delinquent payment from the due date thereof until paid shall be at a rate of two (2%) percent per month.

### 12. BUYER'S DEFAULT

Upon Buyer's default, Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods; reasonable solicitor's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to Buyer. If a deficiency results after the sale, Buyer agrees to pay such forthwith, together with reasonable solicitor's fees, for the recovery of the goods incurred by Seller. If upon Buyer's default, Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable solicitor's fees, shall forthwith be due and payable from Seller to Buyer.

### 13. SECURITY INTEREST AND TITLE

In provinces which are governed by a Personal Property Security Act, this contract shall serve as a security agreement, reserving in Seller a security interest until full payment of the purchase price. The provisions of the Personal Property Security Act regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale hereon. In provinces where a Personal Property Security Act does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under a Personal Property Security Act with the proper registers or offices, or for filing or recording the Conditional Sales Contract herein.

### 14. SALES AND USE TAX

Seller's prices do not include sales, use, excise or other taxes payable to any governmental authority in respect of the sale of Seller's goods. Buyer shall pay, in addition to Seller's price, the amount of any such taxes or shall reimburse Seller for the amount thereof that Seller may be required to pay. At the option of Seller, Buyer shall give evidence of payment or of exemption certificate.

### 15. INSURANCE

Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

### 16. MODIFICATION BY SELLER

Seller may be assigned or transferred by Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

### 17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

### 18. PACKING

Seller does not charge for standard packaging for domestic shipment. Buyer will be charged, however, for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

### 19. EXPORT ORDER

Export orders are to be accompanied by a confirmed irrevocable Letter of Credit in Seller's favor, in Canadian currency, with an accredited Canadian bank, subject to Seller's draft, with shipping documents attached.

### 20. CANCELLATION

Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

### 21. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operating procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to indemnify and save Seller harmless from any such claims arising from such accident.

### 22. MISCELLANEOUS PROVISIONS

(A) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and effect, except that the parties shall try to replace such invalid provision with a provision closest to their original mutual intentions. (B) Any amendments to any contract or contracts require the consent in writing by both parties. Headings in this document are for ease of reference only.

### 23. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by Buyer without prior written consent of Seller.

### 24. APPLICABLE LAW

This agreement shall be governed by the laws of the Province of Ontario and the applicable laws of Canada. Buyer and Seller agree that any judicial proceeding with respect to this agreement must be brought and maintained in the City of Toronto, in the Province of Ontario.

### 25.

This instrument sets forth the entire understanding and agreement of the parties hereto in respect of the subject matter hereof, and all prior undertaking between the parties hereto, together with all representations and obligations of such parties in respect of such subject matter, shall be superseded by and merged into this instrument.

### 26.

The provisions of this agreement shall bind and ensure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and (subject to any restrictions or assignment herein above set forth) assigns, as the case may be.

### 27.

The parties acknowledge that they have requested this document and all notices or other documents relating thereto be drafted in the English language.

Les parties reconnaissent qu'ils ont requis que ce contrat et tous les avis ou autres documents qui s'y rapportent soient rédigés en langue anglaise.

### Global Vision, Local Support

NORD makes its wide product range easily available through a global network that includes representation in over 60 countries. By providing all of our customers with prompt delivery, and expert support services, we are firmly committed to exceeding customer expectations and being responsive to the ideas and specifications of every customer, anywhere in the world.

#### **Global Presence**

Allows for short lead times and quick response times throughout the world.

#### **Modular Design**

More than 20 million totally unique product combinations guarantees that you won't need to look anywhere else.

#### **Quality Manufacturing**

NORD produces maintenance free products that have a long life in order to save you money for the long haul.

#### **Dependable Service**

With emergency service available 24/7 we can help you out when you need us most.

#### **Innovative Products**

Our engineers are hard at work creating solutions to everyday problems.

#### **We Have you Covered**

NORD provides Gear Drives, Motors & AC inverters in order to provide you with a complete Drivesystem solution.
